JR Anderson

Recruitment K. A. Riley, 2019-09-30 In the Valta, no matter what month you were born, everyone is assigned the same birthday. November 1st. It's the anniversary of the day when the government declared war on the Eastern Order. The day you turn seventeen, the Recruiters come to take you away. And no one ever hears from you again. It's October 31st. Today, Kress is sixteen years old. Tomorrow, she'll be taken. The good news? So will her best friend Cardyn, and Brohn, the handsome, enigmatic boy she's avoided all her life. The bad news? Recruitment isn't what any of them expected. Weeks of training await. Military and psychological tests, escape rooms, hand-to-hand combat. The Recruits are told they're the key to winning the war. But with each day that passes, things begin to make less sense. If only Kress had been able to bring her trained raven, Render, with her. If only none of them had ever had to come to this place.

Extremism J. M. Berger, 2018-08-28 This compulsively readable introduction to extremism explains how these ideologies are constructed and how they escalate, offering both historical and contemporary examples In this volume in the MIT Press Essential Knowledge series, J. M. Berger offers a nuanced introduction to the extremist movements threatening to destabilize civil societies around the globe. He explains what extremism is, how extremist ideologies are constructed, and why extremism can escalate into violence. Berger shows that although the ideological content of extremist movements varies widely, there are common structural elements. Berger describes the evolution of identity movements and individual and group radicalization, offering case studies and examples such as: • The destruction of Carthage by the Romans—often called “the first genocide” • The apocalyptic jihadism of Al Qaeda • America's new “alt-right” • The anti-Semitic conspiracy tract The Protocols of the Elders of Zion Berger, an expert on extremist movements and terrorism, explains that extremism arises from a perception of “us versus them,” intensified by the conviction that the success of “us” is inseparable from hostile acts against “them.” Extremism differs from ordinary unpleasantness—run-of-the-mill hatred and racism—by its sweeping rationalization of an insistence on violence. If we understand its causes and the common elements of its movements, Berger says, we will be more effective in countering it.

Routledge Handbook of the Future of Warfare Artur Gruszczak, Sebastian Kaempf, 2023-09-19 This handbook provides a comprehensive, problem-driven and dynamic overview of the future of warfare. The volatilities and uncertainties of the global security environment raise timely and important questions about the future of humanity's oldest occupation:

war. This volume addresses these questions through a collection of cutting-edge contributions by leading scholars in the field. Its overall focus is prognostic rather than futuristic, highlighting discernible trends, key developments and themes without downplaying the lessons from the past. By making the past meet the present in order to envision the future, the handbook offers a diversified outlook on the future of warfare, which will be indispensable for researchers, students and military practitioners alike. The volume is divided into six thematic sections. Section I draws out general trends in the phenomenon of war and sketches the most significant developments, from the past to the present and into the future. Section II looks at the areas and domains which actively shape the future of warfare. Section III engages with the main theories and conceptions of warfare, capturing those attributes of contemporary conflicts which will most likely persist and determine the dynamics and directions of their transformations. The fourth section addresses differentiation and complexity in the domain of warfare, pointing to those factors which will exert a strong impact on the structure and properties of that domain. Section V focuses on technology as the principal trigger of changes and alterations in the essence of warfare. The final section draws on the general trends identified in Section I and sheds light on how those trends have manifested in specific local contexts. This section zooms in on particular geographies which are seen and anticipated as hotbeds where future warfare will most likely assume its shape and reveal its true colours. This book will be of great interest to students of strategic studies, defence studies, war and technology, and International Relations.

Utopian Literature and Science Patrick Parrinder, 2015-08-11 Scientific progress is usually seen as a precondition of modern utopias, but science and utopia are frequently at odds. Ranging from Galileo's observations with the telescope to current ideas of the post-human and the human-animal boundary, this study brings a fresh perspective to the paradoxes of utopian thinking since Plato.

The Correlates of Right-Wing Extremism Christopher W. Young, Michael D. Tucker, 2025-10-02 Research into the causes and creation of right-wing extremists has been focused on the group level, mainly ignoring individual right-wing extremist behaviors, characteristics, and traits. Although group milieu strongly affects individuals' ideology and personal decisions, it overlooks the right-wing extremist's unique experiences, cognitive abilities, and biases. This unique biographical study and research examines the life course events of twenty-five individual right-wing extremists, identifying common biological and circumstantial correlates among and between the subjects. The results of the analysis created an individual right-wing extremist profile that can assist law enforcement agencies, academic researchers, the intelligence community, and the criminal justice system, by making a list of factors that can be used to identify individuals that may be predisposed to the use of violence in the furtherance of their political, religious, and social ideologies. The book also includes analysis of the events of the violent insurrection at the United States Capital in Washington, DC, on January 6th, 2021.

Hospital Infection Threat Ursula Brightonstar, AI, 2025-02-27 Hospital Infection Threat examines the rising crisis of

antibiotic-resistant infections within hospitals, a critical concern for public health. It explores how these infections spread, the factors driving their increase, and strategies to combat them. The book uniquely emphasizes systemic issues within healthcare, such as antibiotic overuse and insufficient infection control, rather than solely focusing on the biology of bacteria. By analyzing hospital practices, the book uncovers how these can inadvertently fuel the spread of resistant infections, threatening to reverse decades of medical progress. The book begins with a historical overview of antibiotic use and resistance, tracing the development of resistant strains. It then delves into transmission mechanisms, risk factors, and the impact of hospital practices, using data from epidemiological studies and infection control audits. For example, the book highlights the correlation between inadequate staffing levels and increased infection rates. Finally, the book presents evidence-based strategies for prevention and control, including antibiotic stewardship programs and enhanced infection control measures. Targeted towards healthcare professionals and policymakers, the book offers a holistic understanding of the issues. It integrates perspectives from microbiology, public policy, and healthcare administration to provide practical solutions for improving infection control practices and optimizing antibiotic use in hospitals. The book's clear, accessible style makes complex information understandable for a broad audience concerned about infectious diseases and public health.

Gaia, Psyche and Deep Ecology Andrew Fellows, 2019-03-04 Winner of the Scientific & Medical Network Book Prize 2019! In *Gaia, Psyche and Deep Ecology: Navigating Climate Change in the Anthropocene*, Andrew Fellows uniquely connects Earth systems, Jungian and philosophical approaches to the existential threats that we face today. He elucidates the psychological basis of our dysfunctional relationship with nature, thereby offering a coherent framework for transforming this in our personal and professional lives. Demonstrating the imperative for new ideas that transcend the status quo, Fellows tackles unprecedented 21st century challenges such as climate change through his interdisciplinary approach. Fellows proposes a worldview, informed by depth psychology, which radically contradicts the prevailing shibboleths of unlimited economic growth, dominion over outer nature and negation of our inner nature. To accommodate a broad readership, he first introduces the Anthropocene and sufficient basics of systems dynamics, Gaia theory and analytical psychology before exploring the mind-matter conundrum. He then correlates the structure, dynamics, contents and pathology of Gaia and of psyche, critiques the Western Zeitgeist as midlife crisis and establishes parallels between deep ecology and psychological individuation. This ground-breaking synthesis of Gaia theory, analytical psychology and deep ecology reveals synergies which show how we can, and why we must, relinquish anthropocentrism in order to survive sustainably as equals in and with the natural world. Combining Jungian theory with other cutting-edge disciplines to inform, inspire and heal, this book is essential reading not only for Jungian analysts, students and scholars, but for all—including professionals in Earth systems science, environmental philosophy and ecopsychology—who realise that 'business as usual' is no longer an option.
