Microbiology Gerard J. Tortora, Berdell R. Funke, Christine L. Case, 2010 This #1 selling non-majors microbiology book is praised for its straightforward presentation of complex topics, careful balance of concepts and applications, and proven art that teaches. In its Tenth Edition, Tortora/Funke/Case responds to the #1 challenge of the microbiology course: teaching a wide range of reader levels, while still addressing reader under-preparedness. The Tenth Edition meets readers at their respective skill levels. First, the book signals core microbiology content to readers with the new and highly visual Foundation Figures that readers need to understand before moving forward in a chapter. Second, the book gives readers frequent opportunities for self-assessment with the new Check Your Understanding questions that correspond by number to the chapter Learning Objectives. Then, a new visual learning orientation includes: an increased number of the popular Diseases in Focus boxes, newly illustrated end-of-chapter Study Outlines that provide students with visual cues to remind them of chapter content, and new end-of-chapter Draw It questions. The all-new art program is contemporary without compromising Tortora/Funke/Case's hallmark reputation for precision and clarity. Content revisions include substantially revised immunity chapters and an increased emphasis on antimicrobial resistance, bioterrorism, and biofilms. The new Get Ready for Microbiology workbook and online practice and assessment materials help readers prepare for the course. The Microbial World and You, Chemical Principles, Observing Microorganisms Through a Microscope, Functional Anatomy of Prokaryotic and Eukaryotic Cells, Microbial Metabolism, Microbial Growth, The Control of Microbial Growth, Microbial Genetics, Biotechnology and Recombinant DNA, Classification of Microorganisms, The Prokaryotes: Domains Bacteria and Archaea, The Eukaryotes: Fungi, Algae, Protozoa, and Helminths, Viruses, Viroids, and Prions, Principles of Disease and Epidemiology, Microbial Mechanisms of Pathogenicity, Innate Immunity: Nonspecific Defenses of the Host, Adaptive Immunity: Specific Defenses of the Host, Practical Applications of Immunology, Disorders Associated with the Immune System, Antimicrobial Drugs, Microbial Diseases of the Skin and Eyes, Microbial Diseases of the Nervous System, Microbial Diseases of the Cardiovascular and Lymphatic Systems, Microbial Diseases of the Respiratory System, Microbial Diseases of the Digestive System, Microbial Diseases of the Urinary and Reproductive Systems, Environmental Microbiology, Applied and Industrial Microbiology . Intended for those interested in learning the basics of microbiology.

Koneman's Color Atlas and Textbook of Diagnostic Microbiology Elmer W. Koneman, 2006 Long considered the definitive work in its field, this new edition presents all the principles and practices readers need for a solid grounding in all aspects of clinical microbiology—bacteriology, mycology, parasitology, and virology. Tests are presented according to the Clinical and Laboratory Standards Institute (formerly NCCLS) format. This extensively revised edition includes practical guidelines for cost-effective, clinically relevant evaluation of clinical specimens including extent of workup and abbreviated identification schemes. New chapters cover the increasingly important areas of immunologic and molecular diagnosis. Clinical correlations link microorganisms to specific disease states. Over 600 color plates depict salient identification features of organisms.

Introductory Microbiology J. Heritage, E. G. V. Evans, R. A. Killington, 1996-01-26 The authors present a basic and accessible introduction to the world of microbiology. In three sections, this book provides both a foundation and overview of the subject. In the first section, 'Microbial Structure and Mode of Life', the structure and functioning of fungi, bacteria and viruses are discussed (with particular attention being paid to their description and discussion of their reproduction and nutrition). The second section, 'Handling Microbes' introduces the methods used to culture, control and study these organisms in the laboratory. The final section covers the 'Isolation, Classification and Identification of Microbes'. This book is essential reading for anyone becoming interested in this subject, whether it be 6th form students, their teachers, or undergraduates.

An Introduction to Microbiology P. Tauro, K. K. Kapoor, K. S. Yadav, 1986 This book has been primarily designed for the undergraduate beginners in microbiology, who have little information about this subject. It contains all basic concepts and principles that a student should know about the different aspects of microbiology including recent developments in the area. This book also provides a comprehensive account of the microbial world including both general and applied aspects. The text, which has been organised into 20 chapters, includes historical aspects; general organization; structure and function of microbial cell; basic principles of microbial nutrition and growth; metabolism; biosynthesis of cellular components; microbial genetics and gene manipulation. Besides these topics, it also covers viruses and differentiation in micro-organisms and various aspects of applied microbiology such as mineral transformations in soil; microbes in industry; food microbiology and dairy microbiology. General Microbiology Linda Bruslind, 2020 Welcome to the wonderful world of microbiology! Yay! So. What is microbiology? If we break the word down it translates to the study of small life, where the small life refers to microorganisms or microbes. But who are the microbes? And how small are they? Generally microbes can be divided in to two categories: the cellular microbes (or organisms) and the acellular microbes (or agents). In the cellular camp we have the bacteria, the archaea, the fungi, and the protists (a bit of a grab bag composed of algae, protozoa, slime molds, and water molds). Cellular microbes can be either unicellular, where one cell is the entire organism, or multicellular, where hundreds, thousands or even billions of cells can make up the entire organism. In the acellular camp we have the viruses and other infectious agents, such as prions and viroids. In this textbook the focus will be on the bacteria and archaea (traditionally known as the prokaryotes,) and the viruses and other acellular agents.
