Challenges and Transitions in Education in Times of Crisis Purpuri, Leah,Gray, Sancha,2024-07-26 The COVID-19 pandemic emerged as a disruptive force that exposed numerous challenges. From the sudden shift to virtual learning accompanied by technology disparities to issues of diversity, equity, and inclusion, the crisis impacted students, families, educators, and leaders alike. The social and emotional well-being of learners took center stage, and the need for academic rigor became even more pressing as learning gaps widened. Teachers faced the challenge of maintaining motivation, while complications in students' home lives became increasingly apparent. The involvement, or lack thereof, of families and communities in the education process added another layer of complexity. It is within this complex educational landscape that our book presents itself as a beacon of hope and transformation. Challenges and Transitions in Education in Times of Crisis is the solution to the unprecedented challenges that COVID-19 brought to the education sector. It goes beyond just analyzing the problems and delves deep into innovative and actionable solutions that have emerged from this crisis. The book provides a comprehensive overview of the educational environment, from pre-pandemic to post-pandemic, through a lens of opportunity. It is a guide for all stakeholders in education, presenting evidence-based strategies and best practices to address the complex issues facing our schools.

Achieving Balance through Efficiency Stephen Demeo,2020-01-01 Those starting a career in teaching will put in an incredible amount of energy into their practice in order to learn their craft and become respected professionals. In many cases, however, this energy is not enough to survive as a teacher. Currently, 1 in 5 new teachers will leave the profession after five years. The purpose of this book is to improve the “survivability” of early career teachers by focusing on one key area: Efficiency or what is referred to as Time Management. This book will examine how teachers can become more efficient in their lesson and unit planning, classroom organization, assessment of their students, how they interact with parents, and even when they search and interview for a job. Special emphasis is placed on one of the most challenging aspects of teaching, classroom behavioral management. The underlying basis for this book is a deep belief that successfully managing time will allow teachers to create a positive balance between one’s professional and personal lives. It is all too common to see time-stressed and sleep exhausted teachers lose sight of the reasons they entered teaching, eventually falling out of love with their subject and those they teach. This book will tackle head on the demands that teachers face by posing many detailed, practical solutions to time management problems in a variety of different contexts. These solutions will not only come from the author’s own experience preparing New York City science students for over 25 years, but from researchers and veteran teachers and administrators who have published their findings and advice in leading educational journals. It is time to stop procrastinating, and draw upon your inner grit to create order, routines, and systems that can be used successfully in your teaching profession.

Course-Based Undergraduate Research Nancy H. Hensel, 2023-07-03 Co-published with the Council on Undergraduate Research Undergraduate research has long been recognized as a high-impact practice (HIP), but has unfortunately been offered only to juniors and seniors, and to very few of them (often in summer programs). This book shows how to engage students in authentic research experiences, built into the design of courses in the first two years, thus making the experience available to a much greater number of students. Research that is embedded in a course, especially general education courses, addresses the issue of how to expand undergraduate research to all students. Research has shown that students who have early experiences in undergraduate research are more likely to pursue further research prior to and after graduation. This is also an issue of social justice because it makes the benefits of undergraduate research available to students who must work during the academic year and in the summer. It is widely accepted that the skills developed through undergraduate research help prepare students for their future careers. The book addresses all aspects of the topic, including:- What are appropriate expectations for research in the first two years- How to design appropriate course-based research for first- and second-year students- How to mentor a class rather than individual students- How students can disseminate the results of their research- Possible citizen-science projects appropriate for the first and second years- Providing additional resources available to support course-based research in the first two years Designed for faculty at four-year and two-year colleges - and including examples from the sciences, the social sciences, and the humanities - the strategies and methods described can be adapted to disciplines not specifically mentioned in the book. Many faculty are hesitant to engage first and second year students in undergraduate research because they worry students don't know enough to conduct authentic research in their discipline, because they worry about the time it will take to develop activities for these students, and because they wonder how they can mentor a whole class of students doing research. The authors have successfully dealt with these issues, and provide examples of how it's done.

Change Agents in Science Education, 2006-01-01 In this engaging and well crafted book, *Change Agents in Science Education* situates the science educator in dynamic social, political, and cultural environments where individuals are engaged in science for change. A wide range of educational contexts are described in the book, including urban school settings in the U. S., slum communities in Mumbai, India, an agricultural community in Benin, Africa, a children's educational television program production company in the U. S. In each context, powerful examples of how science was enacted to transform ways of thinking and doing are demonstrated. Each contributor shares experiences with science, and the

challenges, triumphs and lessons learned which need to be considered and addressed as part of the role of the science educator. Change, it is argued, needs to be facilitated on a variety of levels in order for learning to take place. Science educators working in a wide range of settings, community-based educational groups, and students and researchers interested in formal and informal science education, will benefit from the perspectives provided in this book.
