Regreening the Built Environment Michael A. Richards, 2024-09-18 Now in its second volume, *Regreening the Built Environment* provides an overview of physical and social environmental challenges that the planet is facing and presents solutions that restore ecological processes, reclaim open space, foster social equity, and facilitate a green economy. Healing the planet requires a combination of strategies networked across multiple scales of development, including buildings, sites, communities, and regions. Case studies from a range of locations in the United States, Denmark, Vietnam, Germany, South Korea, Switzerland, France, and the United Kingdom, among others, demonstrate how existing gray infrastructure can be retrofitted with green infrastructure and low-impact development techniques. From this, the author shows how a building can be designed that creates greenspace or generates energy; likewise, a roadway can be a parkway, an alley can be a wildlife corridor, and a parking surface can be a garden. This new edition also includes case studies that have successfully reconnected communities that were fragmented by unjust planning practices and irresponsible patterns of development, resilient design solutions in response to natural disasters, passive design strategies that can make interior spaces more efficient and healthier, and expanded discussions on capturing carbon, renewable energy, agriculture, waste, public transit, and adaptive reuse, including innovative ideas on how to reimagine the shopping mall in the era of e-commerce. The strategies presented in this book will stimulate discussions within the design profession and will be of great interest to students and practitioners of environmental studies, architecture, landscape architecture, and urban design.

Local Government Management Nicolas A. Valcik, Teodoro J. Benavides, 2023-04-11 In a recent paradigm shift, local governments find themselves shouldering more responsibility for day-to-day governance and crisis management, thanks to regulations and federal spending cuts. While 20 years ago a book on local government administration might have been considered complete with chapters on budgeting, public personnel management, productivity and responsiveness, and community engagement, any discussion of local government must now also include resilience, emergency management,

climate change, smart cities, social media, and infrastructure funding. Bringing together key voices from the academic and public sectors, Local Government Management offers techniques and insight into how local government can most effectively lead and manage their resources in an evolving political—and environmental—landscape. Featuring examples from expert contributors' own decades of public service and research, this forward-thinking book explores the rapid speed of change in local communities and the need for local government to not only adapt but also proactively plan for the future. Local Government Management is essential reading for local government officials, public stakeholders, practitioners, and students of public administration and management.

Resource Efficiency and Climate Change United Nations Environment Programme. International Resource Panel,2021-01-12 The International Resource Panel (IRP) was established to provide independent, coherent and authoritative scientific assessments on the use of natural resources and their environmental impacts over the full life cycle. The Panel aims to contribute to a better understanding of how to decouple economic growth from environmental degradation while enhancing well-being. The Secretariat is hosted by the United Nations Environment Programme. IRP assessments demonstrate the opportunities for governments, businesses and wider society to work together to create and implement policies that ultimately lead to sustainable resource management, including through better planning, technological

innovation and strategic incentives and investments. Materials are vital to modern society, but their production is an important source of greenhouse gases. Emissions from material production are now comparable to those from agriculture, forestry, and land use change combined, yet they have received much less attention from the climate policy community. The IPR authors propose looking beyond energy efficiency to reduce global carbon footprint. This report was developed by the IRP in response to a request from the Group of 7. It conducts a rigorous assessment of the contribution of material efficiency to GHG abatement strategies. More concretely, it assesses the potential reduction of GHG emissions from material efficiency strategies applied in residential buildings and light duty vehicles, and reviews policies that address these strategies. The IRP modelling results show that increasing material efficiency can help enhance efforts in moving towards the 1.5° C target set by the Paris Agreement. -- Page 4 of cover
