JS Bruner

Ingeniería de las reacciones químicas Octave Levenspiel, 1993 Éste es un libro de texto y, por lo tanto, se estudian en primer lugar una serie de conceptos sencillos que después se extienden a fenómenos más complejos. Por otra parte, se insiste más en el desarrollo de una técnica de diseño aplicable a todos los sistemas, tanto homogéneos como heterogéneos.

Problemas resueltos de cinética de las reacciones químicas José Felipe Izquierdo Torres, 2004 Esta publicación, con un total de 107 problemas resueltos, puede ser de utilidad como complemento del libro de texto Cinética de las Reacciones Químicas para estudiantes de Licenciaturas en Ingeniería Química y Química que cursen asignaturas que contienen la materia de Cinética de las reacciones químicas. Al inicio de cada uno de los seis capítulos se realiza un breve resumen de los fundamentos teóricos con el fin de poder ayudar al estudiante antes de comenzar la resolución de los problemas. Una vez finalizados, se adjunta la nomenclatura y la bibliografía específica de cada tema. Este libro pretende ser una contribución didáctica a la enseñanza de la Cinética de las Reacciones Químicas, una materia que no suele impartirse habitualmente en la enseñanza secundaria y que resulta fundamental junto con el estudio de la estequiometría y del equilibrio para comprender con qué velocidad, en qué medida y hasta donde puede llegar una reacción química.

Biomass Fractionation Technologies for a Lignocellulosic Feedstock Based Biorefinery S.I. Mussatto, 2016-02-18 Biomass Fractionation Technologies for a Lignocellulosic Feedstock-based Biorefinery reviews the extensive research and tremendous scientific and technological developments that have occurred in the area of biorefining, including industrial processes and product development using 'green technologies', often referred as white biotechnology. As there is a huge need for new design concepts for modern biorefineries as an alternative and amendment to industrial crude oil and gas refineries, this

book presents the most important topics related to biomass fractionation, including advances, challenges, and perspectives, all with references to current literature for further study. Presented in 26 chapters by international field specialists, each chapter consists of review text that comprises the most recent advances, challenges, and perspectives for each fractionation technique. The book is an indispensable reference for all professionals, students, and workers involved in biomass biorefinery, assisting them in establishing efficient and economically viable process technologies for biomass fractionation. - Provides information on the most advanced and innovative pretreatment processes and technologies for biomass - Reviews numerous valuable products from lignocellulose - Discusses integration of processes for complete biomass conversion with minimum waste generation - Identifies the research gaps in scale-up - Presents an indispensable reference for all professionals, students, and workers involved in biomass biorefinery, assisting them in establishing efficient and economically viable process technologies for biomass fractionation

Characterization of Minerals, Metals, and Materials 2016 Shadia Ikhmayies, Bowen Li, John S. Carpenter, Jiann-Yang Hwang, Sergio Neves Monteiro, Jian Li, Donato Firrao, Mingming Zhang, Zhiwei Peng, J. Pablo Escobedo-Diaz, Chengguang Bai, 2016-02-09 Characterization is an important and fundamental step in material research before and after processing. This book focuses on the characterization of minerals, metals, and materials as well as the application of characterization results on the processing of these materials. It is a highly authoritative collection of articles written by experts from around the world. The articles center on materials characterization, extraction, processing, corrosion, welding, solidification, and method development. In addition, articles focus on clays, ceramics, composites, ferrous metals, non-ferrous metals, minerals, electronic, magnetic, environmental, advanced and soft materials. This book will serve the dual purpose of furnishing a broad introduction of the field to novices while simultaneously serving to keep subject matter experts up-to-date.

Scientific Bases for the Preparation of Heterogeneous Catalysts E. Gaigneaux, D.E. De Vos, P.A. Jacobs, J.A. Martens, P. Ruiz, G. Poncelet, P. Grange, 2002-08-29 It has become a tradition that every four years, the Université Catholique de Louvain and the Katholieke Universiteit Leuven jointly organize a symposium devoted to the scientific bases for the preparation of heterogeneous catalysts. These meetings bring together researchers from academia and industry and offer a forum for discussions on the chemistry involved in the preparation of industrial heterogeneous catalysts. This volume containing the Proceedings of the 8th International Symposium on Scientific Bases for the Preparation of Heterogeneous Catalysts consists of papers summarizing most of the 139 oral communications and posters selected by the international scientific committee, composed of 27 experts in the field of catalyst preparation, holding an industrial or academia appointment. The contributions focus on the aspects of catalyst preparation. The main topics are: new approaches in catalyst preparation; advanced preparations of nanoporous and mesoporous catalysts; catalysts preparation for special performances and purposes; catalysts for environmental purposes; and molecular catalysis. Emphasis is put on the role that catalysis can play as an essential

element of sustainable development.

Waste Minimisation and End of Pipe Treatment in Chemical and Petrochemical Industries G. Buitron,A. J. Englande,H. Macarie,2000-05-31 Efficient non-polluting use of resources by the chemical industries requires an integrated and cost effective approach that is both holistic and multimedia. Beneficial present and future resource use should be preserved with a focus on public health and environmental protection. These proceedings contain 59 papers selected both from the oral and poster presentations, representing the best contributions to a conference with the specific aim of evaluating technologies and sharing experiences for minimization and end of pipe treatment of wastes in the chemical/petrochemical industries. This distinctive multidimensional perspective is reflected in the topics covered: wastewater minimization and management; water and wastewater characterisation; physicochemical, aerobic, anaerobic and combined wastewater treatment processes; textile waste treatment; site restoration; and volatile organic compounds treatment. Attention is given to the interaction between source control and end of pipe treatment, where changes in the first often influence the performance of the second. Owing to increasingly stringent effluent requirements including toxicity limits and ecotoxicological concerns, source control is the preferred option for waste management. The opportunities for research and improvements in practical application, as well as the need of enhanced international cooperation between disciplines, are critical to addressing current multifaceted concerns and feature strongly in the high-quality work assembled here.
