Digital Health Innovation for Consumers, Clinicians, Connectivity and Community A. Georgiou, L.K. Schaper, S. Whetton, 2016-08-25 In the last few decades, health informaticians have established the knowledge base and practical expertise to facilitate the development of ever-more capable technical systems, increased connectivity, expanded access and the greater mobility of e-health and information management systems, and we have witnessed the evolution from simple computer-based records to systems allowing intra-organisational, national, and even international communication and information exchange. This book presents 20 of the papers delivered at the 24th Australian National Health Informatics Conference (HIC 2016), held in Melbourne, Australia in July 2016. The primary theme of the 2016 conference is Digital Health Innovation for Consumers, Clinicians, Connectivity and Community. The papers included here reflect this theme, and highlight the cutting edge research evidence, technology updates and innovations that are fuelling the digital transformation of the healthcare sector. They cover a wide spectrum of fields and encompass major theoretical concepts, examples of key applications of new technologies and important new developments in the field of health informatics. The book provides a current overview of trends in health informatics, and will be of interest to all those involved in the planning, design, implementation and delivery of healthcare today.

Connecting the System to Enhance the Practitioner and Consumer Experience in Healthcare Elizabeth Cummings, Angela Ryan, Louise K. Schaper, 2018-08-15 Health informatics plays a central role in the digital transformation of the healthcare sector. The integration and connection of health services, practitioners and consumers is critical to the realisation of the improvements promised by digital health, and the secondary use of health data has led to ground-breaking research discoveries. Increased reliance upon all types of digital media has also established health informatics as a viable specialisation in healthcare. This book presents the proceedings of the 26th national Health Informatics Conference (HIC 2018), Australia's premier health informatics event, held in Sydney, Australia, in July/August 2018. The conference provides an environment for clinicians, researchers, health IT professionals, industry and consumers to integrate, educate and share the knowledge which drives innovative thinking, and this year's theme, 'Today's best practice, innovation today and preparing for tomorrow', focuses on the important issues of connecting the system, being smart with data, and enhancing the practitioner and consumer experience in healthcare interactions. The papers presented here reflect this theme, highlighting

cutting-edge research evidence, technology updates and innovations from the digital transformation of the healthcare sector. Covering a wide spectrum of work, and encompassing major theoretical concepts, examples of key applications of new technologies and important new developments in the field of health informatics, the book will be of interest to all those working in the healthcare sector.

Healthcare Systems Jeffrey Braithwaite, Russell Mannion, Yukihiro Matsuyama, Paul G. Shekelle, Stuart Whittaker, Samir Al-Adawi, 2018-05-11 In this book, we invited 146 authors with expertise in health policy, systems design, management, research, or practice, from each of the countries included, to consider health reforms or systems improvements in their country or region. The resulting case studies, of 52 individual countries and five regional groupings, cover 152 countries or territories, or three-quarters of the world's nations. Each chapter author was asked to think 5-15 years into the future and make a prediction on how their health system could be strengthened as a result of the successful unfolding of their case study. The types of projects our authors have chosen to explicate into the future are wide-ranging. They vary from e-consultation services in Estonia, achieving universal health coverage in Argentina and Mexico, reforming long-term care in the Netherlands, reassessing care for the aging population and the frail elderly in Australia, streamlining the health system through Lean Thinking in Nigeria, using regulation to improve care in South Africa, developing a new accreditation model in Turkey, through to a critique of physician specialization in Russia and applying IT initiatives to improve care in China, Lebanon, Taiwan, Papua New Guinea, the United Arab Emirates, Venezuela and Wales. Chapter writers recognized that the improvement work they were doing was part of a moving target. There was general agreement that the effective use of limited resources and overcoming hurdles and constraints were crucial to enhancing health systems in order to deliver better care over the medium term. While some initiatives required considerable funding, many were relatively inexpensive. These case studies demonstrate ways in which fruitful application of partnerships and creativity can make considerable gains in strengthening healthcare delivery systems. Features The third book in a series on international health reform Involves 146 contributing authors, five regional editors, a series editor and a highly skilled support team to explore sustainable improvement in health systems in the future Encompasses a time horizon of the next 5-15 years Covers 152 countries or territories, with 52 individual countries and an analysis of five regional groupings comprising 100 countries

Transforming Healthcare with Qualitative Research Frances Rapport, Jeffrey Braithwaite, 2020-10-27 Drawing on the knowledge and experiences of world-renowned scientists and healthcare professionals, this important book brings together academic, medical and health systems accounts of the impact of applying qualitative research methods to transform healthcare behaviours, systems and services. It demonstrates the translation of tried-and-tested and new interventions into high-quality care delivery, improved patient pathways, and enhanced systems management. It melds social theory, health systems analysis and research methods to address real-life healthcare issues in a rich and realistic fashion. The systems and

services examined include those affecting patient care and patient and professional wellbeing, and the roles and responsibilities of people providing and receiving care. Some chapters delve deeply into the human psyche, examining the very private face of health and illness. Others concentrate on public health and how people's needs can be met through health promotion and new investments. From real-time case studies to narratives on illness to theories of change, there is something here for everybody. Transforming health systems needs ingenuity – and the drive of individuals, the staying power of systems and above all the involvement of patients. Full of novel ideas and innovative solutions from around the world, all underpinned by qualitative methods and methodologies, this book is a key contribution for advanced students, practitioners and academics interested in health services research, research methods and the sociology of health and illness.

Routledge Handbook of Climate Change and Health System Sustainability Jeffrey Braithwaite, Yvonne Zurynski, Carolyn K-lynn Smith, 2024-05-20 The Routledge Handbook on Climate Change and Health System Sustainability takes the reader on a journey to understand the interconnectedness of human health, climate change, and healthcare systems. The book begins by exploring how climate change is affecting human health through the increasing frequency of natural disasters, such as bush fires, droughts and heatwaves, and the emergence of new infectious diseases, such as the SARS-CoV2 virus, all of which drive up demand for health services that are already heavily burdened by increasing rates of chronic diseases and ageing populations. Chapters then turn to the contribution of the healthcare system itself to climate change— explaining how current clinical practices, including wasteful care of low value, create an unsustainable carbon footprint and threaten the very viability of healthcare systems. Throughout the volume, descriptions of practical solutions and implemented case studies are used to illustrate the feasibility of taking action in the real world of the healthcare delivery ecosystem. Bringing together a mix of forward-thinking environmental and health researchers, policymakers, leaders, managers, clinicians, patients, and health industry leaders to clarify the current state and future of sustainable healthcare systems, this book will be of interest to researchers and policymakers of climate and health systems.

Organising the Health Care Workforce Yvonne Zurynski, Mark Exworthy, 2025-08-19 This book explores some of the most daunting workforce challenges in healthcare services in history. These challenges are not new, but reflect decades of under-investment and lack of strategic planning. According to the World Health Organization, there will be a global shortage of 18 million health workers by 2030, mainly in low- and middle-income countries. This book draws upon the best papers from the international Organisational Behaviour in Health Care (OBHC) conference, which took place at the University of Birmingham in 2022, hosted by the Health Services Management Centre. The OBHC conference is linked to the Society for Studies in Organising Health Care (SHOC), a learned society affiliated to the UK Academy of Social Sciences. Taking an international approach, this edited volume incorporates the highest quality papers submitted by members of the society and Key themes explored include clinical leadership in times of crisis, human resource management in homecare, and

organisational behaviour and the health care workforce. With its in depth coverage, this book will appeal to international healthcare practitioners.

Managing Healthcare Organisations in Challenging Policy Contexts Roman Kislov, Diane Burns, Bjørn Erik Mørk, Kathleen Montgomery, 2021-10-09 Healthcare managers, professionals and service users operate in an increasingly complex environment in terms of policy, regulation and governance arrangements. The policy process is becoming pluralised as competing narratives are drawn upon to influence practice. A wide range of contradictory and inconsistent policies are on offer to healthcare stakeholders, which ultimately results in a broad spectrum of responses, adaptations and improvisations throughout the process of policy implementation. The impact on managerial and professional practice is significant: Whilst some voices are suppressed or ignored, the complex nature of contemporary policy contexts can also help local actors exercise their agency and advance their agenda. This edited volume investigates how contemporary policy trends are influencing healthcare systems, organisations and professions and explores the various ways in which policy implementation could be enacted, resisted and reinvented by healthcare managers and professionals on the ground. It sheds light on the complex web of connections that exist between policy development (Part I), its translation into practice (Part II), and the activities of organisational leaders who are trying their best to make sense of - and succeed in - challenging policy contexts (Part III).

The Digital Doctor: Hope, Hype, and Harm at the Dawn of Medicine's Computer Age Robert Wachter, 2015-04-10 The New York Times Science Bestseller from Robert Wachter, Modern Healthcare's #1 Most Influential Physician-Executive in the US While modern medicine produces miracles, it also delivers care that is too often unsafe, unreliable, unsatisfying, and impossibly expensive. For the past few decades, technology has been touted as the cure for all of healthcare's ills. But medicine stubbornly resisted computerization - until now. Over the past five years, thanks largely to billions of dollars in federal incentives, healthcare has finally gone digital. Yet once clinicians started using computers to actually deliver care, it dawned on them that something was deeply wrong. Why were doctors no longer making eye contact with their patients? How could one of America's leading hospitals give a teenager a 39-fold overdose of a common antibiotic, despite a state-of-the-art computerized prescribing system? How could a recruiting ad for physicians tout the absence of an electronic medical record as a major selling point? Logically enough, we've pinned the problems on clunky software, flawed implementations, absurd regulations, and bad karma. It was all of those things, but it was also something far more complicated. And far more interesting . . . Written with a rare combination of compelling stories and hard-hitting analysis by one of the nation's most thoughtful physicians, *The Digital Doctor* examines healthcare at the dawn of its computer age. It tackles the hard questions, from how technology is changing care at the bedside to whether government intervention has been useful or destructive. And it does so with clarity, insight, humor, and compassion. Ultimately, it is a hopeful story. We need to recognize that computers

in healthcare don't simply replace my doctor's scrawl with Helvetica 12, writes the author Dr. Robert Wachter. Instead, they transform the work, the people who do it, and their relationships with each other and with patients. . . . Sure, we should have thought of this sooner. But it's not too late to get it right. This riveting book offers the prescription for getting it right, making it essential reading for everyone – patient and provider alike – who cares about our healthcare system.
