

# Fama And French Three Factor Model

Duc Vo

**Comparison of the CAPM, the Fama-French Three Factor Model and Modifications** Christoph Lohrmann, 2015-08-18 Seminar paper from the year 2014 in the subject Economics - Finance, grade: 6,0 (Schweizer Notensystem), University of Liechtenstein, früher Hochschule Liechtenstein, language: English, abstract: This paper is focused on comparing the Capital Asset Pricing Model, the Fama-French Three Factor model and two modified versions of the Fama-French Model in their ability to explain excess returns. The first modified model contains the same explanatory variables as the Fama-French Model but with an additional AR(1) process. The second modification contains instead of an additional AR(1) an AR(2) process. Evaluated by the adjusted R<sup>2</sup> and the Akaike information criterion, the Fama-French model yields a higher model-fit than the CAPM. The modified Fama-French Model with an AR(2) process leads to significant results for the twice lagged return in the model in four out of six tested portfolios. Therefore, the in-sample regression reveals a higher model-fit of the modified Fama-French model with AR(2) in comparison to the other three models. Since the results differ from a regression in the subsequent period, the results are most likely spurious. Nevertheless, the authors show the higher model-fit of the Fama-French Three Factor Model in relation to the CAPM.

**On the Robustness of the Extended Fama-French Three Factor Model** Intan Nurul Awwaliyah, 2018 The aim of this paper is to examine the validity of the four-factor asset pricing as a comparison the standard Fama-French three factor model using U.S. monthly stock return data from period January 1963 to December 2010. Monthly stock return are constructed into 25 portfolio while the four-factor model includes the market factor (beta), the size factor (SMB), the book-to-market factor (HML), and the 'momentum' factor (MOM) which represents winners minus losers in terms of returns. Time series regressions following Fama and French (1993) are employed which includes the three-factor model as well as the four-factor model. Results indicated that the four-factor model to some extent have significant capability in explaining the variations in average excess stock return which consistent with Carhart (1997). R<sup>2</sup> from the four-factor model is just slightly higher than the three factor model yet it provides indicative for the robustness of the model. Meanwhile, the January seasonals are also able to be absorbed by the risk factors including the market, SMB, HML, and MOM. Since the four-factor model seems capable in explaining the variation of the stock returns then application of this model in emerging markets may provide guidance for investor in understanding the market condition.

### **Testing the Fama and French Three-Factor Model and its Variants for the Indian Stock Returns** Bhavna

Bahl, 2006 I empirically study the Fama and French three-factor model of stock returns along with its variants, including the one-factor Capital Asset Pricing Model for 79 stocks listed on the BSE-100 stock market index for India. These sample stocks are split into six portfolios sorted on size and book-to-market equity ratio. The factor portfolios that explain the returns are the market factor, size factor (SMB) and value factor (HML). I find strong evidence for the market factor in all the portfolios, it being regarded with having highest explanatory power. The SMB and HML factors can not be clearly ranked in this regard. On the basis of the adjusted  $R^2$ , I confirm that the three-factor model captures better the common variation in the stock returns than the CAPM, the average adjusted  $R^2$  being 87% for the former model and 76% for the latter model. I further carry out a joint test on the constant term in the portfolio regressions using the GRS test statistic, checking for any abnormal returns that are not captured by the factor portfolios. Using this statistic, I again find that the three-factor model of Fama and French fares better in explaining the cross-section of returns in the portfolios than its variants and the CAPM. I have also checked for any seasonal effects that could be present in the sample and have found none.

**Is the Fama-French Three-factor Model Better Than the CAPM?** Kenneth Lam, 2005 This paper compares the performance of the Fama-French three-factor model and the Capital Asset Pricing Model (CAPM) using two data sets. One set of portfolios is formed on size and the book-to-market equity ratio and another set is formed on industry. Using these two sets of portfolios, time series and cross-sectional tests are conducted over two different periods. The tests cannot unambiguously conclude that the three-factor model is better than the CAPM. Moreover, different data sets and periods yield different test results.

### **How Domestic is the Fama and French Three-Factor Model? An Application to the Euro Area** G. A.

Moerman, 2013 The euro area has faced a high number of monetary and policy changes in the recent past as a consequence of the European integration process and, naturally, these developments have important implications for portfolio diversification and asset pricing. Therefore, this paper concentrates on the performance of a specific asset pricing model: the Fama and French three-factor model. Griffin (2002) shows that the Fama and French factors are country specific for the U.S., the U.K, Canada, and Japan. We apply the same methodology to the euro area countries and find that even in this very integrated area the domestic three-factor model outperforms the euro area three-factor model. However, the relative performance of the euro area wide model is increasing, especially for countries with a high number of listed stocks. This could be interpreted as evidence of a higher level of equity market integration caused by lower investment barriers and a changing point of view of institutional investors. Furthermore, we extend the methodology and also test an industry-specific three-factor model. Our findings suggest that lower pricing can be acquired using an industry-specific model relative to the euro area three-factor model.

The Fama and French Three-Factor Model and Leverage Michael J. Dempsey, 2009 The issue of whether the Fama and French (FF) three-factor model is consistent with the propositions of Modigliani and Miller (MM) (1958, 1963) has received surprisingly little attention. Yet, unless it is so, the model is at variance with the foundations of finance. Fama and French (FF) (1993, 1995, 1996, 1997) argue that their three-factor asset pricing model is representative of equilibrium pricing models in the spirit of Merton's (1973) inter-temporal capital asset pricing model ICAPM or Ross's (1976) arbitrage pricing theory (APT) (FF, 1993, 1994, 1995, 1996). Such claims however are compromised by the observations of Lally (2004) that the FF (1997) loadings on the risk factors lead to outcomes that are contradictory with rational asset pricing. In response, we outline an approach to adjustment for leverage that leads by construction to compatibility of the FF three-factor model with the Modigliani and Miller propositions of rational pricing.

Comparative Analysis of Trade and Finance in Emerging Economies William A. Barnett, Bruno S. Sergi, 2023-04-10 This volume of the International Symposia in Economic Theory and Econometrics explores the latest economic and financial developments in Africa and Asia.

**Complex Systems in Finance and Econometrics** Robert A. Meyers, 2010-11-03 Finance, Econometrics and System Dynamics presents an overview of the concepts and tools for analyzing complex systems in a wide range of fields. The text integrates complexity with deterministic equations and concepts from real world examples, and appeals to a broad audience.

**Sustainable Development in Banking and Finance** Nesrin Ozatac, Nigar Taspinar, Bezhan Rustamov, 2024-09-16 This volume presents current developments in the fields of banking and finance from an international perspective. Featuring contributions from the 7th International Conference on Banking and Finance Perspectives (ICBFP), this volume serves as a valuable forum for discussing current issues and trends in the banking and financial sectors. The most recent theoretical and applied models for explaining sustainable development in banking and finance, in addition to other sectors, are discussed. This volume is designed for academics, policymakers, banking analysts, and insurance and financial institutions to discuss the complexities of these disciplines from multiple viewpoints.

Which Factors are Priced? An Application of the Fama French Three-Factor Model in Australia Duc Vo, 2014 This empirical study is conducted to apply the Fama French three-factor model in the Australian context using the most recent daily data for the period of 5 years from July 2009 to May 2015. The focus of this study is on various approaches of portfolio formation adopted in previous empirical studies in Australia and overseas. Three scenarios are constructed to assess the robustness of the estimated coefficients from the model. The approach proposed by Fama and Macbeth (1973) - the two-stage cross-sectional regression technique is adopted in this paper. The findings from this study under various scenarios and various approaches to portfolio formations across portfolios are mixed. This study finds that only book-to-market factor is priced in Australia. However, there is a negative relationship between this factor and a return of a stock which is in contrast

with an expectation of the Fama French three-factor model. As such, a claim from a recent study in Australia that for the first time, Fama French three-factor model produces a consistent outcome is simply exaggerated. It can be argued that this new finding is an outcome of another “data mining” which is generally labelled for the findings from the Fama French three-factor model.

*The Explanatory Power of Fama and French Three Factor Model* Anh Viet Bui, 2010

**Empirical Analysis of Multifactor Asset Pricing Models. A Comparison of US and Japanese REITs** Tim Perschbacher, 2023-07-10 Bachelor Thesis from the year 2021 in the subject Business economics - Investment and Finance, grade: 1,0, , language: English, abstract: This study is concerned with an empirical analysis of asset pricing. More specifically, this paper examines whether multifactor asset pricing models are able to explain variation in REIT returns in the US and Japan. In addition to traditional multifactor models, an Alternative Four-Factor Model (AFF) was developed considering net profit margin as an additional risk factor. Thence, this paper seeks to provide valuable information for investors and fund managers regarding their indirect real estate investment selection. Using a sample period between July 1994 (US) / July 2011 (Japan) to December 2020, rigorous multiple-time-series regression is applied to calculate factor loadings for each risk factor and the corresponding alpha values of each model to evaluate their effectiveness in explaining variation and cross-section of REIT returns. Most studies on asset pricing models focus on size and value sorted portfolios as dependent variables. This paper broadens the approach with four other double sorted test portfolios to check the robustness of each single factor to explain return anomalies. Results show that market premium and size premium represent risk factors for US-REITs, whereas market premium and value premium are suitable risk factors for Japanese-REITs. The momentum factor does not capture risk and is insignificant in both markets. The study shows low correlations between traditional and REIT specific as well as between US and Japanese risk factors. This suggests that firstly risk factors are country specific and secondly that they are asset specific. Moreover, the Fama-French Three-Factor Model (FF3) clearly outperforms the CAPM, while the Carhart Four-Factor Model (CH4) marginally improves the explanatory power over the FF3. This is observed in both markets. Outcomes demonstrate that the Alternative Four-Factor Model (AAF) does not improve prediction power for returns of Japanese-REITs compared to the FF3 and CH4. On the contrary, results are ambiguous concerning US-REITs. While the additional risk factor, net profit margin, generates a negative return, the model is superior to the FF3 and CH4 in terms of explaining variation and cross-section of returns.

**Growing Presence of Real Options in Global Financial Markets** John W. Kensinger, 2017-12-13 The broad theme of this volume of Research in Finance is Comparing the Influence upon Equity Valuation of Strategy Compared with Cash Flow Expectations. Contributions assess the strong role of strategy in equity valuation, compared with valuation of expected dividends.

**A New Look at the Fama-French Model** Matthias X. Hanauer, 2014 We test the Fama-French three-factor model for a large international data set using an alternative proxy for expected returns - the implied cost of capital (ICC). The implied risk premiums of the three factors are all highly significant. Also, the cross-country variation of each of the three factor risk premiums is much smaller compared to their counterparts based on realized returns. For all countries, we find the cross-sectional variation in expected stock returns not only to depend on the stock's market risk but also to be driven by its exposure toward the implied size and value factors. Moreover, even though portfolio intercepts for the three-factor model display significant alphas, they are very small from an economic perspective. We conclude that the Fama-French three-factor model is an appropriate asset pricing model using this alternative proxy for expected returns.

**Tests of the Fama and French Three Factor Model in Jordan** Khaled Abdelal Al-Zubi, 2019 A dynamic capital market is an important segment of the financial system of any country in which it plays a significant role in mobilizing savings and channeling them for productive purposes. The efficient fund allocation depends on the stock market efficiency in pricing the different securities trade in. The objective of this paper is to specify a model that may predict the stock return in the industrial companies sector in Amman Stock Exchange (ASE). Another objective is to find out if the applicable models employed in the developed markets explain the cross sectional variations on stock return at the industrial sector in Amman Stock Exchange. We used Generalized Methods of Moments (GMM) to regress the two main models. The results showed that two of the three factors of the Fama and French (FF) model were applicable in the industrial sector in ASE (Market return and Size). We also found that the FF model explains the common variation and captures the cross section variation in stock return better than the Capital Asset Pricing Model (CAPM). In Jordan, specific evidence has not been published on the FF three factor model. One feature of the FF which reduces its appeal (when compared to its simpler counterpart, CAPM) is the difficulty surrounding the nature and construction of the size and book-to-market factors. This is particularly so in smaller markets where extensive and reliable data over sufficiently long time-series are prohibitively expensive to compile or often simply do not exist. Consequently, the primary objective of the current paper is to identify a relatively simple way around this problem.

**An Empirical Study of the Fama and French Three-factor Model** Bin Mao, 2009 By using the methodology of the Cointegration test to focus on the long run relationship and conditional volatility by GARCH model to focus on risk relationship, the results suggest that i) the value premium is related to the changes of fundamental risk; ii) there is an asymmetric effect on the price of the value stock and growth stock under different business conditions; iii) and the three risk factors are driven by a similar source of macroeconomic activity change, but the interactive relationship between these three risk factors is essential in explaining the rates of return, thus, they should be used together. Overall, the results in this thesis support the view that the Fama and French three-factor model is a strong model in explaining rates of return, and that the

value premium is generated from systemic risk and should be used in the equilibrium asset pricing model. The finding is useful for academics and practitioners alike.

*Asset Pricing Factor Models in the German Stock Market* Julian Fischer, 2021-06-14 Master's Thesis from the year 2021 in the subject Business economics - Investment and Finance, grade: 1,7, University of Hannover (Institut für Finanzwirtschaft und Rohstoffmärkte), language: English, abstract: In this paper, we examine how various modern multifactor models, such as the Carhart factor model, five-factor model and its complement six-factor model by Fama and French, the q-factor model by Hou, Wue and Zhang, and the mispricing factor model by Stambaugh and Yuan perform in the German stock market. It is discernible that, depending on the application model, like factor spanning tests, different sortings, return anomalies, sector- and equity fund investigation, they often provide quite similar explanatory power, while in individual cases sometimes one and sometimes the other model performs better. The underlying factors contribute differently to the explanatory power depending on the time period. Thus, in case of doubt, the six-factor model is preferable, as it is the most versatile model. Since the establishment of the capital asset pricing model as a cornerstone of modern capital market theory in the 1960s, new investigations and studies have been built on this model on an ongoing basis. This continuously leads to extensions and modifications of the asset pricing models since then. These models can be used in various ways, for example to explain the pricing of risky financial assets under restrictive assumptions or to gain important insights into the relationship between expected return and risk of securities. These can be used in various ways, for example to explain the pricing of risky financial assets under restrictive assumptions or to gain important insights into the relationship between expected return and risk of securities. In this paper, we aim to answer the overarching research question of how modern asset pricing models perform for the German stock market. For this purpose, we first discuss the characteristics of the German stock market, followed by the milestones of the development of factor models, their empirical evidence and their factors, as well as internationally known return anomalies. In the subsequent part, five modern asset pricing models are tested in different scenarios of the German stock market, including factor spanning tests, different sortings, anomalies, sectors and in equity funds. For this purpose, various analytical methods are used and performed with the software "Stata". Finally, the comprehensive results are summarized and concluded.

**The CAPM vs. The Fama and French Three-Factor Pricing Model** David M. Porras, 1998 The CAPM and Fama and French (FF) three-factor pricing model are subjected to a series of tests using out of sample data, free from many of the biases present in typical testing. Data is collected from the Value Line Investment Survey allowing for survivorship and look-ahead biases to be eliminated. Further, it is argued that simple portfolio selection rules and the use of data from a source commonly consulted by investors minimizes data snooping concerns. Stronger support is found for the CAPM than that reported by FF (1992, 1996). Size and book-to-market equity (B/M) are insignificant in cross-sectional regressions, and

Gibbons, Ross, and Shanken (1989) F-tests cannot reject the appropriateness of the CAPM when stocks are sorted into size and B/M portfolios. Beta, on the other hand, emerges as a powerful anomaly. Neither the CAPM nor the FF model can explain the high (low) returns on low (high) beta portfolios.

*Does Fama-French Three Factor Model Outweigh the CAPM Model? Evidence from the Dhaka Stock Exchange*  
Mohammad Abu Sayeed, 2015 In this paper we compare the explanatory power of a single index model with the multifactor asset-pricing model of Fama and French (1996) for Dhaka stock exchange for the period of January 1, 2010 to December 31, 2012. We find that all the three factors have significant determining impact on stock returns. Moreover, the three factor model has higher explanatory power than the CAPM to account for time series variation of stock returns. Our findings show that firm size and book-to-market equity helps to explain the variation in average stock returns in a meaningful manner. In summary, our findings suggest that CAPM beta is not alone sufficient to explain the average expected stock returns in Bangladesh.

Asset Pricing Models and the Fama-French Three-factor Model, 2006

Adopting the Beat of Phrase: An Psychological Symphony within **Fama And French Three Factor Model**

In a global eaten by displays and the ceaseless chatter of instant communication, the melodic elegance and emotional symphony developed by the written word usually fade in to the background, eclipsed by the constant sound and disturbances that permeate our lives. Nevertheless, set within the pages of **Fama And French Three Factor Model** a charming literary treasure filled with organic feelings, lies an immersive symphony waiting to be embraced. Constructed by a masterful composer of language, this fascinating masterpiece conducts viewers on a psychological journey, skillfully unraveling the hidden songs and profound impact resonating within each carefully constructed phrase. Within the depths of this touching analysis, we shall examine the book is main harmonies, analyze their enthralling publishing type, and submit ourselves to the profound resonance that echoes in the depths of readers souls.

## **Fama And French Three Factor**

### **Model Introduction**

In today's digital age, the availability of Fama And French Three Factor Model books and manuals for download has revolutionized the way we access information. Gone are the days of physically flipping through pages and carrying heavy textbooks or manuals. With just a few clicks, we can now access a wealth of knowledge from the comfort of our own homes or on the go. This article will explore the advantages of Fama And French Three Factor Model books and manuals for download, along with some popular platforms that offer these resources. One of the significant advantages of Fama And French Three Factor Model books and manuals for download is the cost-saving aspect. Traditional books and manuals can be costly, especially if you need to purchase several of them for educational or professional purposes. By accessing Fama And French Three Factor Model versions, you eliminate the need to spend money on physical copies. This not only saves you money but also reduces the environmental impact associated with

book production and transportation. Furthermore, Fama And French Three Factor Model books and manuals for download are incredibly convenient. With just a computer or smartphone and an internet connection, you can access a vast library of resources on any subject imaginable. Whether you're a student looking for textbooks, a professional seeking industry-specific manuals, or someone interested in self-improvement, these digital resources provide an efficient and accessible means of acquiring knowledge. Moreover, PDF books and manuals offer a range of benefits compared to other digital formats. PDF files are designed to retain their formatting regardless of the device used to open them. This ensures that the content appears exactly as intended by the author, with no loss of formatting or missing graphics. Additionally, PDF files can be easily annotated, bookmarked, and searched for specific terms, making them highly practical for studying or referencing. When it comes to accessing Fama And French Three Factor Model books and manuals, several platforms offer an extensive

collection of resources. One such platform is Project Gutenberg, a nonprofit organization that provides over 60,000 free eBooks. These books are primarily in the public domain, meaning they can be freely distributed and downloaded. Project Gutenberg offers a wide range of classic literature, making it an excellent resource for literature enthusiasts. Another popular platform for Fama And French Three Factor Model books and manuals is Open Library. Open Library is an initiative of the Internet Archive, a nonprofit organization dedicated to digitizing cultural artifacts and making them accessible to the public. Open Library hosts millions of books, including both public domain works and contemporary titles. It also allows users to borrow digital copies of certain books for a limited period, similar to a library lending system. Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable

resources for students and researchers. Some notable examples include MIT OpenCourseWare, which offers free access to course materials from the Massachusetts Institute of Technology, and the Digital Public Library of America, which provides a vast collection of digitized books and historical documents. In conclusion, Fama And French Three Factor Model books and manuals for download have transformed the way we access information. They provide a cost-effective and convenient means of acquiring knowledge, offering the ability to access a vast library of resources at our fingertips. With platforms like Project Gutenberg, Open Library, and various digital libraries offered by educational institutions, we have access to an ever-expanding collection of books and manuals. Whether for educational, professional, or personal purposes, these digital resources serve as valuable tools for continuous learning and self-improvement. So why not take advantage of the vast world of Fama And French Three Factor Model books and manuals for download and embark

on your journey of knowledge?

### **FAQs About Fama And French Three Factor Model Books**

How do I know which eBook platform is the best for me? Finding the best eBook platform depends on your reading preferences and device compatibility. Research different platforms, read user reviews, and explore their features before making a choice. Are free eBooks of good quality? Yes, many reputable platforms offer high-quality free eBooks, including classics and public domain works. However, make sure to verify the source to ensure the eBook credibility. Can I read eBooks without an eReader? Absolutely! Most eBook platforms offer web-based readers or mobile apps that allow you to read eBooks on your computer, tablet, or smartphone. How do I avoid digital eye strain while reading eBooks? To prevent digital eye strain, take regular breaks, adjust the font size and background color, and ensure proper lighting while reading eBooks. What

the advantage of interactive eBooks? Interactive eBooks incorporate multimedia elements, quizzes, and activities, enhancing the reader engagement and providing a more immersive learning experience. Fama And French Three Factor Model is one of the best book in our library for free trial. We provide copy of Fama And French Three Factor Model in digital format, so the resources that you find are reliable. There are also many Ebooks of related with Fama And French Three Factor Model. Where to download Fama And French Three Factor Model online for free? Are you looking for Fama And French Three Factor Model PDF? This is definitely going to save you time and cash in something you should think about.
