Advanced Anomaly Detection Technologies and Applications in Energy Systems Tinghui Ouyang,Yusen He,Xun Shen,Zhenhao Tang,Yahui Zhang,2025-02-17 Anomaly detection is an important topic which has been well-studied in diverse research areas and application domains. It generally involves detection of abnormal data, unhealthy status, fault diagnosis, and can be helpful to guarantee industrial systems' stability, security, and economy. As development of intelligent industries and sensor systems grows, large amounts of data become easily available, and challenges arise in industrial systems' anomaly detection. One typical case is the study within energy-related systems, like thermal energy, renewable energy study (e.g., wind energy, photovoltaic), electric vehicles, and so on. These systems can involve various data formats and more complex data structures making anomaly data detection a challenge. Currently, under the development of deep learning and big data analytics, many promising results have been achieved in energy systems' anomaly data detection. However, many challenging problems remain unsolved due to the complex nature of energy industries. New techniques and advanced engineering applications on anomaly detection in energy systems still appeal to a wide range of scholars and industries.

**Assessing Learners Online** Albert Oosterhof,Rita-Marie Conrad,Donald P. Ely,2008 Online assessment and, more broadly, the entire online learning environment provides expanded opportunities to actively and creatively engage the learner. The approach the authors have taken in this book is to work from the established fundamentals of assessment, applying these principles to the online environment. The authors emphasize basic issues of assessment such as establishing the evidence of validity for assessments, but the context of the discussion is always that of an online environment. Written by leading technology experts, this clear and practical text serves as a training guide for assessing online or distance learners. Readers learn how to select what should be assessed, how to use written tests and projects to evaluate the skills learners have achieved, how to provide feedback to learners, and how to efficiently use course management software. The authors believe educators involved with online training and education must have the same assessment expectations and standards as those in conventional, face-to-face environments. This book is appropriate for instructional designers and educators involved with online training and education as well as for college courses concerned with the design and delivery of distance or other forms of online instruction. It also has utility as a personal reference for instructors of courses that assess students online.

*Acquisition and Application of Multimodal Sensing Information* Xukun Yin,Changhui Jiang,Huadan Zheng,Kaijie Xu,Angelo Sampaolo,2023-10-11 With the development of advanced sensors in modern science and technology, sensors have already penetrated into such fields as industrial production, space development, ocean exploration, environmental protection, medical diagnosis, biological engineering, and even cultural relic protection. Sensors are the basis of all data acquisition. Almost every modern project, from the exploration of the vast universe and ocean, to the complex engineering systems, is inseparable from a variety of sensors. Sensors convert physical parameters (e.g., temperature, pressure, humidity, speed,

etc.) into signals that can be measured electrically. A high-performance sensor with the advantages of high sensitivity, high resolutions, and real-time observation is desirable. In addition, the application of computers and advanced signal processing methods makes sensor management possible. The use of sensing data from multiple sensors has been proven to be an efficient way to improve service experiences in different IOT IoT fields, e.g., intelligent transportation, remote sensing, smart city, and UAVs.
