Technical Analysis of Commodities Carley Garner,2011-02-18 Use technical analysis techniques to time your commodities trades and maximize your profit potential! There are three primary forms of commodity market analysis: technical, fundamental, and seasonal. Successful trading most likely comes through of a combination of all three, but I believe technical analysis is the most critical because it enables traders to time entry and exit any speculative position. Simply being right about market direction doesn't guarantee profits; timing is everything!

Integrating Technical Analysis for the Investor BC Low, 2014-09-01 Overview : A book on Technical Analysis written for the Investor Yes, it is possible to use technical analysis for investing, not just trading! Technical analysis has always been seen as a tool for short-term trading rather than investing. Through this book, the author will share with investors an original approach to technically define the trend for the various time frames - Daily, Weekly, Monthly and so on. The book will reveal the consistent relationship between the time frames. It explains which time frame dictates a market's behavior and shows how to invest better with the knowledge of the larger time frames. The book's second innovation is to help investors integrate technical trend, timing and price indicators for market entry and exit. This approach integrates signals from various technical tools rather than rely on signals from a single indicator, whether it be timing or price for entry and exit. This integrated approach has been effectively used by the author for investing for many years. Learn : • Time tested techniques to define a market's trend • To integrate trend, timing and time indicators for optimal market entry and exit in trending and non-trending market environments • About the two-way and three-way relationships between monthly, weekly and daily time frames • How to invest better with the knowledge of the relationship of multiple time frames of markets About the author BC Low (CMT) has been a teacher-cum-practitioner in Technical Analysis since the 1980s. Low has published in Technical Analysis of Stocks & Commodities in September 2010 and November 2012. He has delivered many seminars to various financial institutions in Singapore and abroad. He was the President of the Singapore Technical Analysts & Traders Society (STATS) in 2011-13. Formerly a Senior Lecturer in Singapore Polytechnic, he developed and taught two modules of Technical Analysis from 1992 to 2011. The Encyclopedia of Trading Strategies Jeffrey Katz, Donna McCormick, 2000-02-29 The Encyclopedia of Trading Strategies is for traders who want to take the next step to consistently profitable trading. The authors--themselves seasoned veterans of the futures trading arena--pinpoint the trading methods and strategies that have been shown to produce market-beating returns. Their rigorous and systematic backtesting of each method, using the same sets of markets and analytic techniques, provides a scientific, system-based approach to system development...to help you assemble the trading system that will put you on the road to becoming a more consistently profitable trader.

The New Commodity Trading Systems and Methods Perry J. Kaufman, 1987-09-09 One of the best and complete sources for locating, understanding, and developing a trading strategy. Focusing on ways to trade on the futures (or any) market for profit, it fully explains entire trading systems, classifies many approaches, points out their similarities and differences, and describes how these techniques will cause greater risk or reward given different circumstances. Chapters build from simple systems to more complex approaches, such as spectral analysis, showing why simplicity is often best. Includes some systems appropriate for computer application, with many programs appearing in an appendix. The treatment is complete, clearly written, and unbiased.
