Infrastructural Times Jean-Paul D. Addie, Michael R. Glass, Jen Nelles, 2024-03-28 Whether waiting for the train or planning the future city, infrastructure orders—and depends on—multiple urban temporalities. This agenda-setting volume disrupts conventional notions of time through a robust examination of the relations between temporality, infrastructure, and urban society. Conceptually rich and empirically detailed, its interdisciplinary dialogue encompasses infrastructural systems including transportation, energy, and water to bridge often-siloed technical, political-economic and lived perspectives. With global coverage of diverse cities and regions from Berlin to Jayapura, this book is an essential provocation to re-evaluate urban theory, politics, and practice and better account for the temporal complexities that shape our infrastructured worlds.

Geography Jan Nijman, Michael Shin, Peter O. Muller, 2020-01-15 Since its first appearance, *Geography: Realms, Regions, and Concepts* has consistently broken new ground in the interpretation and teaching of world regional geography. For more than four decades, *REGIONS*, as it has come to be called, has explained the contemporary world's geographic realms and their natural environments and human dimensions. The authors look at the ways people have organized their living space, adapted to changing social as well as environmental circumstances, and continue to confront forces largely beyond their control, ranging from globalization to climate change. This book was the first to introduce an approach to Geography that meshes theoretical concepts with regional realities. The evolving regional content of the chapters in *REGIONS*, 18th Edition, reflects the dynamic nature of the world's geography; the changing and growing number of concepts mirror the progress of the discipline; and the ongoing introduction of new digital features reflects the instructional possibilities of new technologies.

Science and Technology Against Microbial Pathogens A. Mñndez-Vilas, 2011 The aim of this book is to disseminate the most recent research in science and technology against microbial pathogens presented at the first edition of the ICAR Conference Series (ICAR2010) held in Valladolid, Spain, in November 2010. This volume is a compilation of 86 chapters written by active researchers that offer information and experiences and afford critical insights into anti-microbe strategies in a general context marked by the threat posed by the increasing antimicrobial resistance of pathogenic microorganisms. Anti is here taken in a wide sense as against cell cycle, adhesion, or communication, and when harmful for the human health (infectious diseases, chemotherapy etc.) and industry or economy (food, agriculture, water systems etc.) The book examines this interesting subject area from antimicrobial resistance (superbugs, emerging and re-emerging pathogens etc.), to the use of natural products or microbes against microbial pathogens, not forgetting antimicrobial chemistry, physics and material science. Readers will find in a single volume, up-to-date information of the current knowledge in antimicrobial research. The book is recommended for researchers from a broad range of academic disciplines that are contributing in the battle against harmful microorganisms, not only those more traditionally involved in this research area (microbiologists, biochemists, geneticists, clinicians etc.), but also experimental and theoretical/computational chemists, physicists or engineers.
