Google SketchUp 8 for Interior Designers Daniel John Stine, 2012 SketchUp is an all-purpose 3D modeling tool. The program is primarily developed around architectural design, but it can be used to model just about anything. It is an easy way to quickly communicate your design ideas to clients or prospective employers. Not only can you create great still images, SketchUp also is able to produce walk-thru videos! This book has been written with the assumption that you have no prior experience using Google SketchUp. With this book, you will be able to describe and apply many of the fundamental principles needed to develop compelling SketchUp models. The book uses a series of tutorial style exercises in order to introduce you to SketchUp. Several pieces of furniture are modeled throughout the book. The process is broken down into the fundamental concepts of 2D line work, 3D extraction, applying materials, and printing. Although the book is primarily written with a classroom setting in mind, most individuals will be able to work through it on their own and benefit from the tips and tricks presented.

Hack This John Baichtal, 2011-10-06 Join today's new revolution in creativity and community: hackerspaces. Stop letting other people build everything for you: Do it yourself. Explore, grab the tools, get hands-on, get dirty...and create things you never imagined you could. *Hack This* is your glorious, full-color passport to the world of hackerspaces: your invitation to share knowledge, master tools, work together, build amazing stuff—and have a flat-out blast doing it. Twin Cities Maker co-founder John Baichtal explains it all: what hackerspaces are, how they work, who runs them, what they're building—and how you can join (or start!) one. Next, he walks you through 24 of today's best hackerspace projects...everything from robotic grilled-cheese sandwich-makers to devices that make music with zaps of electricity. Every project's packed with color photos,

visualization techniques include image composites, video composites, 2D drawings, drive-through or fly-through animations, 3D rendering models, virtual reality, and 4D CAD. These methods are used mainly to communicate within the design and construction team and between the team and external stakeholders. Use of visualization improves understanding of design intent and project concepts and facilitates effective decision making. However, visualization tools are typically used for presentation only in large-scale urban projects. Visualization is not widely accepted due to a lack of demonstrated engineering benefits for typical agency projects, such as small- and medium-sized projects, rural projects, and projects where external stakeholder communication is not a major issue. Furthermore, there is a perceived high cost of investment of both financial and human capital in adopting visualization tools. The most advanced visualization technique of virtual reality has only been used in academic research settings, and 4D CAD has been used on a very limited basis for highly complicated specialty projects. However, there are a number of less intensive visualization methods available which may provide some benefit to many agency projects. In this paper, we present the results of a feasibility study examining the use of visualization and simulation applications for improving highway planning, design, construction, and safety and mobility.
