Molecular Informatics in Precision Medicine Abdul Azeez Sayed,J. Francis Borgio,Hari S. Sharma,2024-12-30

Innovations in the field of genomics, phenomics, transcriptomics, proteomics, epigenomics, metabolomics, and microbiomics integrated with molecular informatics can be an appropriate methodology to develop novel prediction, prevention and treatment strategies for human diseases based on differences in people's genes, termed as Precision medicine, commonly referred as Personalized Medicine. One-size-fits-all-approach for treating patients is suitable strategy only for certain extant but not for all patients, as patients are unique in genetic makeup and influenced by the environmental factors, and lifestyle. Molecular informatics can target customized treatment strategies to reduce exposure to adverse effects and to achieve the goal of precision medicine, to identify “the right treatments to the right patients at the right time”. Integrated and standardised new technologies will be essential to ensure effective translation if the precision medicine is to become a reality for various human diseases.
