Ecogames Laura op de Beke,Joost Raessens,Stefan Werning,Gerald Farca,2025-10-24 With the climate crisis and its repercussions becoming more and more tangible, games are increasingly participating in the production, circulation, and interrogation of environmental assumptions, using both explicit and implicit ways of framing the crisis. Whether they are providing new spaces to imagine and practice alternative forms of living, or reproducing ecomodernist fantasies, games as well as player cultures are increasingly tuned in to the most pressing environmental concerns. This book brings together chapters by a diverse group of established and emerging authors to develop a growing body of scholarship that explores the shape, impact, and cultural context of ecogames. The book comprises four thematic sections, Today's Challenges: Games for Change, Future Worlds: New Imaginaries, The Nonhuman Turn, and Critical Metagaming Practices. Each section explores different aspects of ecocritical engagement in and through games. As a result, the book's comprehensive scope covers a variety of angles, methodologies, and case studies, significantly expanding the field of green media studies.

Examining Multiple Intelligences and Digital Technologies for Enhanced Learning Opportunities Zheng, Robert Z.,2019-09-27 Multiple intelligences (MI) as a cognitive psychology theory has significantly influenced learning and teaching. Research has demonstrated a strong association between individual intelligences and their cognitive processes and behaviors. However, it remains unknown how each of or a combination of these intelligences can be effectively optimized through instructional intervention, particularly through the use of emerging learning technology. On the other hand, while efforts have been made to unveil the relationship between information and communication technology (ICT) and individual learner performance, there is a lack of knowledge in how MI theory may guide the use of ICTs to enhance learning opportunities for students. *Examining Multiple Intelligences and Digital Technologies for Enhanced Learning Opportunities* is an essential reference book that generates new knowledge about how ICTs can be utilized to promote MI in various formal and informal learning settings. Featuring a range of topics such as augmented reality, learning analytics, and mobile learning, this book is ideal for teachers, instructional designers, curriculum developers, ICT specialists, educational professionals, administrators, instructors, academicians, and researchers.
