**The Homeschooling Parent Teaches MATH!** Kerridwen Mangala McNamara, 2023-11-10 We all worry about our kids learning math. Even if the kids are in school, there's always a concern. Sometimes it's about the kid's concern... sometimes it's about their teacher's concern (parent-teacher or otherwise). But a lot of the time it's about US. It's about our own math-phobias - those 'fears, dislikes, or aversions' that we picked up from our own math experiences and that we inadvertently pass on to our kids. We don't want them to be afraid of math - we know that limits their opportunities and makes their lives harder and costs them more money - but we just can't help it. This book is here to help you deal with your own math-phobias and come to - if not outright enjoy math, to at least appreciate it and be able to convey it to your kids without passing on the fear. Kerridwen Mangala McNamara is NOT a 'math-lover' but she is a math-appreciator and has worked through most of these issues herself. Let her help you along your homeschooling journey and show you how to fight the Fear-of-Math monster so that it no longer intimidates you - or your kids!

[The Well-Trained Mind](#) Susan Wise Bauer, Jessie Wise, 2016-08-09 Is your child getting lost in the system, becoming

bored, losing his or her natural eagerness to learn? If so, it may be time to take charge of your child's education—by doing it yourself. The *Well-Trained Mind* will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school—one that will train him or her to read, to think, to understand, to be well-rounded and curious about learning. Veteran home educators Susan Wise Bauer and Jessie Wise outline the classical pattern of education called the trivium, which organizes learning around the maturing capacity of the child's mind and comprises three stages: the elementary school "grammar stage," when the building blocks of information are absorbed through memorization and rules; the middle school "logic stage," in which the student begins to think more analytically; and the high-school "rhetoric stage," where the student learns to write and speak with force and originality. Using this theory as your model, you'll be able to instruct your child—whether full-time or as a supplement to classroom education—in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. Thousands of parents and teachers have already used the detailed book lists and methods described in *The Well-Trained Mind* to create a truly superior education for the children in their care. This extensively revised fourth edition contains completely updated curricula and book lists, links to an entirely new set of online resources, new material on teaching children with learning challenges, cutting-edge math and sciences recommendations, answers to common questions about home education, and advice on practical matters such as standardized testing, working with your local school board, designing a high-school program, preparing transcripts, and applying to colleges. You do have control over what and how your child learns. *The Well-Trained Mind* will give you the tools you'll need to teach your child with confidence and success.

Thomasson and Pesut integrate the use of technology (assuming no prior graphing calculator skills on the part of students); allow students to experience algebra through discovery and visualization; illustrate multiple approaches (numerical, graphical, algebraic, and

verbal) to problem solving; use real-world situations to help students connect algebra to other fields of mathematics as well as other disciplines; and ask students to communicate mathematically as well as work collaboratively in groups.
