Médecine de la douleur Pierrick Poisbeau, Meggane Melchior, 2025-10-22 Ouvrage de référence pour la formation initiale et continue de tous les professionnels de la santé et du soin, ce manuel propose un parcours progressif leur donnant la possibilité d'approfondir leur compréhension des aspects mécanistiques les plus avancés de la douleur et de l'analgésie, tels que les étudient les neurosciences. Au-delà, le manuel propose des approches sociologique, anthropologique et psychologique nécessaires à la prise en compte globale des personnes. S'appuyant sur la dimension de santé intégrative propre à cette médecine dédiée à des pathologies complexes, l'ouvrage intègre les thérapies complémentaires. Il réaffirme les bases scientifiques (souvent méconnues ou rejetées par les médecins) de ces approches antalgiques anciennes (musique, hypnose, thérapies manuelles, TCC, etc.) et émergentes (réalité virtuelle, e-santé).

Evaluation de la prise en charge de la maladie de Paget vulvaire Pauline Fattet, 2021 Introduction: La maladie de Paget vulvaire (MPV) est un cancer rare d'excellent pronostic, associé à un taux de récurrence élevé et une altération de la qualité de vie. Objectifs: L'objectif principal de cette étude était de décrire la population franc-comtoise atteinte de MPV. Les objectifs secondaires étaient d'examiner les facteurs influençant l'efficacité et la tolérance des traitements. Méthodes: Une étude rétrospective multicentrique a été réalisée sur une population franc-comtoise de patientes atteintes de MPV entre 1981 et 2021. Les données étaient issues de l'analyse de leur dossier médical d'une part, et du recueil de la perception de leur qualité de vie d'autre part, via deux questionnaires (traduction française du QLQ VU34 validé en anglais et un questionnaire créé pour l'étude, adapté à la MPV). Résultats: Parmi les 21 patientes incluses, le prurit (85%) et les brûlures vulvaires (35%) étaient les symptômes les plus fréquents. Le délai diagnostique médian était de 24 mois [0 à 110 mois], associé à un âge médian au diagnostic de 72 ans [38 à 88 ans]. La réalisation d'un traitement adjuvant post-opératoire (reprise chirurgicale, laser CO2, imiquimod) diminuait significativement le risque de récurrence à 5 ans de suivi (p

Maladie de Paget vulvaire Lise Dahan, 2010 La maladie de Paget vulvaire, correspondant à un adénocarcinome intra-

épidermique, est une pathologie vulvaire rare, mais qui peut poser des difficultés de prise en charge. OBJECTIFS : - Réaliser une revue de la littérature concernant les critères diagnostiques cliniques et anatomopathologiques, et les modalités thérapeutiques de cette pathologie. - Présenter l'expérience du CHU de Bordeaux. - Mettre en évidence des facteurs cliniques et para-cliniques pronostiques d'évolution péjorative de cette pathologie en termes de récidives locales, d'évolution invasive ou d'association à un cancer à distance, définissant des sous-groupes de patientes. MATERIELS ET METHODES : Une étude rétrospective a étudié une série de 20 patientes traitées et/ou suivies entre 2000 et 2010 au CHU de Bordeaux. Une analyse descriptive a été réalisée avec confrontation des données cliniques et anatomopathologiques pour chaque sous-groupe. Une recherche de surexpression d'HER-2/neu pour l'ensemble de nos cas est venue compléter notre travail. RESULTATS : Nous avons mis en évidence des facteurs pronostiques cliniques associés à une évolution récidivante, invasive ou associée à un cancer locorégional ou à distance. Nous avons pu également dégager des facteurs pronostiques anatomopathologiques associés à une évolution récidivante. Une surexpression d'HER-2/neu est retrouvée dans 80 % des cas pour l'ensemble de nos patientes, et entre 88 % et 100 % pour les formes invasives, récidivantes et celles associées à une néoplasie à distance. Nous recommandons toujours un traitement chirurgical en première intention. Cependant les alternatives thérapeutiques actuelles ont leur place dans la prise en charge de ces malades. Nous proposons donc une grille de recueil prenant en compte ces facteurs pronostiques afin d'optimiser la création d'un futur registre national. Nous évoquons l'intérêt de réaliser des études cliniques sur la place du trastuzumab dans le traitement de cette pathologie.

Traitement de la maladie de Paget vulvaire par dynamique topique Emilie Clément,2008 Le traitement de référence de la maladie de paget extra-mammaire (MPEM) intra-épidermique vulvaire repose sur la chirurgie, parfois délabrante et avec un fort taux de récurrence. La photothérapie dynamique (PDT) topique est une alternative thérapeutique avec des taux de rémission complète intéressants, sans limitation de dose ni séquelle fonctionnelle ou esthétique lourdes. Notre étude était rétrospective et portait sur 3 patientes d'âge moyen 64 ans, traitées pour MPEM vulvaire. Les patientes étaient traitées par PDT topique : 3h après application de crème de 5 méthyl-aminolevulinate, illumination en lumière rouge (640nm) à 37J/cm2 pendant 10 minutes. Deux séances étaient réalisées à 7j d'intervalle. Après 4 séances, le taux de rémission complète était de 66%. Le facteur limitant paraît être la douleur pendant l'illumination, un cas de douleur sévère ayant nécessité une brève anesthésie générale. Le taux de rémission complète à 6 mois, après 4 séances de PDT, était proche de celui de la chirurgie. Cependant nous manquons de recul dans le temps par rapport au taux de rechute. Le facteur limitant principal rencontré était la douleur pendant l'illumination. Cette étude montre la place de la PDT topique dans la prise en charge de la MPEM tant sur le point clinique que fonctionnel, et propose un protocole antalgique de première intention.
