A Case Approach to Perioperative Drug-Drug Interactions Catherine Marcucci,Michael P. Hutchens,Erica D. Wittwer,Toby N. Weingarten,Juraj Sprung,Wayne T. Nicholson,Kirk Lalwani,David G. Metro,Randal O. Dull,Christopher E. Swide,F. Jacob Seagull,Jeffrey R. Kirsch,Neil B. Sandson,2015-09-15 The occurrence of deleterious or even fatal drug-drug interactions (DDIs) in the perioperative period is no longer a theoretical concern but a harrowing reality. A Case Approach to Perioperative Drug-Drug Interactions addresses the complex realm of pharmacokinetic drug interactions in an easy-to-read

volume that functions as both a comprehensive clinical reference and a casebook. The book presents a summary of the core concepts of drug interactions; an organized, annotated presentation of the drug interactions most relevant to the perioperative clinician; and approximately 200 case scenarios that highlight specific drug interactions. This book fills a real void in the clinical literature and is invaluable to anesthesiologists and surgeons, as well as trainees in both specialties; intensive care staff, including physicians, physician's assistants, and nurses; and nurse practitioners who staff preoperative evaluation clinics.

Drug-induced Neurological Disorders Kewal K. Jain, 2021-07-13 This book is a first-of-its kind reference that systematically organizes and describes the adverse effects of drugs on the nervous system. Drug safety is recognized as an important aspect of pharmaceutical companies as well as practice of medicine. Chapters include case reports of adverse effects of drugs that are published as well as reported to drug manufacturers. The book scope is broad as it covers lack of efficacy, drug resistance, drug-disease and drug-drug interactions. This information is used to improve the use of drugs as well as to design better and safer drugs for the future, and is relevant to personalized medicine in trying to match the right drugs to the patients. Drug-induced Neurological Disorders offers a unique approach to this important topic by integrating clinical neurology with pharmacology with a focus on effects of drugs on the nervous system including those used for the treatment of neurological disorders as well systemic diseases. Many adverse effects involve multiple systems of the body and the syndromes with predominant effect on the nervous system are included in this book.

Some Drugs and Herbal Products IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, International Agency for Research on Cancer, 2016 This volume of the IARC Monographs provides an assessment of the carcinogenicity of 14 drugs and herbal products. The IARC Monographs Working Group relied mainly on epidemiological studies to evaluate the carcinogenic hazard to humans exposed to the drugs digoxin (widely prescribed for the treatment of chronic heart failure), pioglitazone (used for the treatment of type 2 diabetes mellitus), and hydrochlorothiazide (used to treat hypertension). Other agents evaluated included the drugs primidone, sulfasalazine, pentosan polysulfate sodium, and triamterene, and five herbal products (or their components): Aloe vera whole leaf extract, goldenseal root powder, Ginkgo biloba leaf extract, kava extract, and pulegone. In view of the limited agent-specific information available from epidemiological studies, assessments of these agents relied mainly on carcinogenicity bioassays to reach conclusions as to the carcinogenic hazard to exposed humans.
