Meta-topolin: A Growth Regulator for Plant Biotechnology and Agriculture Naseem Ahmad, Miroslav Strnad, 2021-05-02

Plant tissue culture (PTC) technology has gained unassailable success for its various commercial and research applications in plant sciences. Plant growth regulators (PGRs) are an essential part of any plant tissue culture intervention for propagation or modification of plants. A wide range of PGRs are available, including aromatic compounds that show cytokinin activities, promote cell division and micro-propagation, viz. kinetin, N6-benzyladenine and topolins. Topolins are naturally occurring aromatic compounds that have gained popularity as an effective alternative for other frequently used cytokinins in in vitro culture of plants. Among them, meta-topolin [6-(3-hydroxybenzylamino) purine] is the most popular and its use in plant tissue culture has amplified swiftly. During the last few decades, there have been numerous reports highlighting the effectiveness of meta-topolin in micropropagation and alleviation of various physiological disorders, rooting and acclimatization of tissue culture raised plants.

Pretreatment and Bioconversion of Crop Residues Carlos Martín, 2021-08-26 In this book, 15 papers, covering some of the latest advances in pretreatment and bioconversion of crop residues, are presented. Research results dealing with wheat straw, corn stover, sweet sorghum bagasse, hazelnut shells, oil palm empty fruit bunch, olive tree pruning biomass, and other residues of crop harvest and processing are discussed. Pretreatment methods, such as auto-catalyzed and acid-catalyzed hydrothermal processing, steaming, alkaline methods, and different organosolv approaches, are reported. Bioconversion with enzymes and microbes for producing fermentable sugars, xylitol, and biomethane are also included.

Climate-Environment Interactions under Global Warming, volume II Hainan Gong, Haipeng Yu, Zhiyuan Hu, Qinqian Jin, 2025-03-07 During recent decades, the global climate and environment have experienced unprecedented changes. Much evidence indicates that the global surface temperature is increasing rapidly, especially in the Arctic, and extreme climate and environmental events are frequently occurring. Climate and environmental changes not only have a great impact on society and the economy but also seriously exert far-reaching impacts on both human lives and health. Therefore, revealing the mechanisms behind the climate and environmental changes is critical to advancing our understanding and predicting of the global climate and environmental changes and their impacts. Climate change can cause environmental change, and environmental change may in turn affect climate change. For example, the faster Arctic warming can change the mid-latitude large-scale atmospheric circulation and further modulate the regional air quality through transport and diffusion. Conversely, the air pollution associated with industrial activities may also affect the regional and global climate through the complicated aerosol-climate interaction. The limited understanding of these feedback and interactions adds uncertainty to predicting the future evolution of the climate and environment.
