Stephen E. Palmer

Beginning Psychology Malcolm Hardy, Steve Heyes, 1999 This standard introductory text offers students a complete and accessible introduction to the central elements of psychology.

3D Shape Zygmunt Pizlo, 2010 Zygmunt Pizlo is Professor of Psychological Sciences and Electrical and Computer Engineering (by courtesy) at Purdue University.

In the Mind's Eye Mary A. Peterson, Barbara Gillam, H. A. Sedgwick, 2007-01-04 In the Mind's Eye will be of interest to researchers working on topics such as perceptual organization, visual attention, space perception, motion perception, visual cognition, the relationship between perception and action, picture perception, and film, who are striving to obtain a deeper understanding of their own fields, and who want to integrate this understanding into a broader, unified view of visual perceptual processing.

Human and Machine Vision Jacob Beck, Barbara Hope, Azriel Rosenfeld, 2014-06-20 Human and Machine Vision provides information pertinent to an interdisciplinary program of research in visual perception. This book presents a psychophysical study of the human visual system, which provides insights on how to model the flexibility required by a general-purpose visual system. Organized into 17 chapters, this book begins with an overview of how a visual display is segmented into components on the basis of textual differences. This text then proposes three criteria for judging representations of shape. Other chapters consider an increased use of machine vision programs as models of human vision and of data from human vision in developing programs for machine vision. This book discusses as well the diversity and flexibility of systems for representing visual information. The final chapter deals with dot patterns and discusses the process of inferring orientation information from collections of them. This book is a valuable resource for psychologists, neurophysiologists, and computer scientists.

Systems of Representation in Young Children Chris Pratt, Alison F. Garton, 1993 Examines the development and use of representation in children, from the viewpoints of various expert psychologists worldwide. They describe how children

develop representations and how these are used in systematic ways to make sense of and interpret the social and physical world and to communicate with others. Coverage includes emotional and social representations, symbolic development, representation of spoken language and more.

Vision Science Stephen E. Palmer,1999-04-14 This book revolutionizes how vision can be taught to undergraduate and graduate students in cognitive science, psychology, and optometry. It is the first comprehensive textbook on vision to reflect the integrated computational approach of modern research scientists. This new interdisciplinary approach, called vision science, integrates psychological, computational, and neuroscientific perspectives. The book covers all major topics related to vision, from early neural processing of image structure in the retina to high-level visual attention, memory, imagery, and awareness. The presentation throughout is theoretically sophisticated yet requires minimal knowledge of mathematics. There is also an extensive glossary, as well as appendices on psychophysical methods, connectionist modeling, and color technology. The book will serve not only as a comprehensive textbook on vision, but also as a valuable reference for researchers in cognitive science, psychology, neuroscience, computer science, optometry, and philosophy.

Foundations of Sensation and Perception George Mather,2009 The first edition of this comprehensive introduction to sensation and perception has been highly praised for its unique approach: it allows students to thoroughly grasp the fundamental principles in relation to the relatively simple sensory systems before moving on to the more complex topics.--BOOK JACKET.

Formal Theories of Visual Perception Emanuel Laurens Jan Leeuwenberg,H. F. J. M. Buffart,1978 Theories on field effects; Coding theories of complex patterns.

Fundamentals of Sensation and Perception Michael W. Levine,Jeremy M. Shefner,1991 The new edition of this successful book provides a comprehensive and authoritative overview of the sensory systems--vision, audition, touch, taste, and smell. In each case the neural machinery relating sensation and perception is described and integrated with the physiological underpinning.This edition includes a CD which provides demonstrations and simulations to explain and clarify the perceptual phenomena.
