Industrial Metrology Graham T. Smith, 2002-06-13 The subject of this book is surface metrology, in particular two major aspects: surface texture and roundness. It has taken a long time for manufacturing engineers and designers to realise the usefulness of these features in quality of conformance and quality of design. Unfortunately this awareness has come at a time when engineers versed in the use and specification of surfaces are at a premium. Traditionally surface metrology usage has been dictated by engineers who have served long and demanding apprenticeships, usually in parallel with studies leading to technician-level qualifications. Such people understood the processes and the achievable accuracies of machine tools, thereby enabling them to match production capability with design requirements. This synergy, has been made possible by the understanding of adherence to careful metrological procedures and a detailed knowledge of surface measuring instruments and their operation, in addition to wider inspection room techniques. With the demise in the UK of polytechnics and technical colleges, this source of skilled technicians has all but dried up. The shortfall has been made up of semi skilled craftsmen, or inexperienced graduates who cannot be expected to satisfy traditional or new technology needs. Miniaturisation, for example, has had a profound effect. Engineering parts are now routinely being made with nanometre surface texture and flatness. At these molecular and atomic scales, the engineer has to be a physicist.

Ultra-High Temperature Materials V Igor L. Shabalín, 2025-06-13 This fifth volume continues the book series *Ultra-High Temperature Materials* by Igor Shabalín, which deals with materials with melting (sublimation or decomposition) points around or over 2500 °C. In this respect the book has over-branched cross-links with the sections and tables of the previous Volumes I-IV. The book includes a thorough treatment of the physical and chemical properties of ultra-high temperature materials,

namely such as molybdenum carbides, including semi- and monocarbide phases with all known modifications, it accomplishes the full description of refractory carbides of d-elements, which was begun from Volume II of the series. The book, jointly with the previous volumes, can be used as a unique database on special materials with the highest refractoriness and heat-resistance ever achieved in the modern engineering and technological practice.
