This book equips students, researchers, and clinicians with the practical skills and approaches necessary to face the unique challenges and opportunities of practicing population genomics in developing countries. Following a brief foundational overview, more than a dozen authors working in developing nations share applied case studies from the field, including rationale, methods, analysis, and outcomes to reinforce understanding. Key themes across the country-specific chapters include efficient genetic data generation and effective computational and statistical tools to analyze population-level data. This book then discusses clinical interpretation of these data, from direct-to-consumer ancestry testing to translational and applied precision medicine. A final chapter considers the ethical aspects of conducting genomic research in developing countries. - Addresses the unique opportunities to positively impact global health by practicing population genomics in developing countries - Features applied case studies from genomic research in various developing nations, with clear instruction in research rationale, methods, tools, materials used, analysis, and outcomes - Features international chapter authors and population genomics experts practicing in South Africa, Gabon, India, South America, Central America, and Honduras, among other locations

**Pharmacological and Non-Pharmacological Therapy for Obesity and Diabetes, volume II** Guilherme Zweig

Rocha,Alexandre Gabarra Oliveira,Bruno Melo Carvalho,2024-02-02 Given the success of the previous collection Pharmacological and Non-Pharmacological Therapy for Obesity and Diabetes, we are pleased to announce the launch of Volume II. Overweight and obesity are defined as abnormal or excessive fat accumulation that may induce inflammation and impair health, leading to metabolic syndrome and diabetes. Their prevalence is increasing and is considered a major public health concern in the 21st century. While numerous mechanisms have been proposed for this epidemic of obesity, it is well agreed upon that lack of physical activity and high calorie intake plays causal roles. Understanding the causes that lead to obesity and also its prevention or reversion are of public health priority. This could be managed by either modification of lifestyle (through physical activity to restore energy balance or reduction of calorie intake, proper diet that is rich in fiber, increasing energy outlay) or using adequate medication.

It brings together some of the top scholars engaged in biostatistical method development on global health to highlight and describe recent advances in evidence-based global health applications. The volume is composed of five main parts: data harmonization and analysis; systematic review and statistical meta-analysis; spatial-temporal modeling and disease mapping; Bayesian statistical modeling; and statistical methods for longitudinal data or survival data. It is designed to be illuminating and valuable to both expert biostatisticians and to health researchers engaged in methodological applications in evidence-based global health research. It is particularly relevant to countries where global health research is being rigorously conducted.

At present, less than 30% of researchers worldwide are women. Long-standing biases and gender stereotypes are discouraging girls and women away from science-related fields, and Science, Technology, Engineering and Mathematics (STEM) research in particular. Science and gender equality are, however, essential to ensure sustainable development as highlighted by UNESCO. In order to change traditional mindsets, gender equality must be promoted, stereotypes defeated, and girls and women should be encouraged to pursue STEM careers.
