Time-cost-quality Trade-off Analysis for Construction Projects Mahmoud Mohamed El Bassuony, 2016 Abstract:

The main objective of construction projects is to finish the project according to an available budget, within a planned schedule, and achieving a pre-specified extent of quality. Therefore, time, cost, and quality are considered the most important attributes of construction projects. The purpose of this study is to incorporate quality into the traditional two-dimensional time-cost trade-off (TCT) in order to develop an advanced three-dimensional time-cost-quality trade-off (TCQT) approach. Time, cost, and quality of construction projects are interrelated and have impacts on each other. It is a challenging task to strike a balance among these three conflicting objectives of construction projects since no one solution can be optimal for the three objectives. The overall performance of a project regarding time, cost, and quality is determined by the duration, cost, and quality of its activities. These attributes of each activity depend on the execution option by which the activity's work is completed. It is required to develop an approach that is capable of finding an optimal or near optimal set of execution options for the project's activities in order to minimize the project's total cost and total duration, while its overall quality is maximized. For the aforementioned purpose, three various Microsoft Excel based TCQT models have been developed as follows:

- First, a simplified model is developed with the objective of optimizing the total duration, cost, and quality of simple construction projects utilizing the GA-based Excel add in Evolver.
- Second, a stochastic model is developed with the objective of optimizing the total duration, cost, and quality of construction projects applying the PERT approach in order to consider uncertainty associated with the performance of execution options and the whole project.
- Third, an advanced multi objective optimization model is developed utilizing a self-developed optimization tool having the following capabilities:

1. Selecting an appropriate execution option for each activity within a considered project to optimize the objectives of time, cost, and quality.
2. Considering the discrete nature of duration, cost, and quality of various options for executing each activity.
3. Applying three various optimization approaches, which are the Goal Programming (GP), the Modified Adaptive Weight Approach (MAWA), and the Non-dominated Sorting Genetic Algorithms (NSGAI).
4. Analyzing both TCT and TCQT problems.
5. Considering finish-to-finish, start-to-start, and start-to-finish dependency relationships in addition to the traditional finish-to-start relationships among activities.
6. Considering any number of successors and predecessors for activities.
7. User-friendly input and output interfaces to be used for large-scale projects.

To validate the developed models

and demonstrate their efficiency, they were applied to case studies introduced in literature. Results obtained by the developed models demonstrated their effectiveness and efficiency in analyzing both TCT and TCQT problems.

Construction Project Management John F Woodward,1997-04-10 This work explains the principles and theories of project management and how and when the different project management techniques can be applied. Construction Quality and the Economy Low Sui Pheng,Lau Shing Hou,2019-01-08 This book discusses the relationship between construction quality and the state of the Singapore national economy, and describes how construction quality is affected as contracting firms strategically manage issues relating to profitability and survivability during economic boom and bust cycles. Adopting a three-pronged approach to explain the key issues, the book first explains the effect of the state of the Singapore national economy (boom or bust) on the construction quality delivered by contracting firms. Secondly, it explains how contracting firms respond to the performance of the national economy through their dynamic bidding strategies, leading to significant quality trade-offs in some instances, especially when there is imprecise market information. Thirdly, it recommends various strategic measures that key stakeholders and government policy-makers can take to circumvent the quality trade-off in the construction industry when faced with dynamic fluctuations in the performance of the national economy. Although the book focuses on Singapore, it appeals to a global audience since countries worldwide (and their respective building-related stakeholders) face the same issues in terms of the time-cost-quality trade-off decision-making process involving the entire supply chain.

Application of Mathematics and Optimization in Construction Project Management Hêriş Golpîra,2021-12-12 This book provides a broad overview of project and project management principles, processes, and success/failure factors. It also provides a state of the art of applications of the project management concepts, especially in the field of construction projects, based on the Project Management Body of Knowledge (PMBOK). The slate of geographically and professionally diverse authors illustrates project management as a multidisciplinary undertaking that integrates renewable and non-renewable resources in a systematic process to achieve project goals. The book describes assessment based on technical and operational goals and meeting schedules and budgets.

SDGs in Construction Economics and Organization Göran Lindahl,Stefan Christoffer Gottlieb,2023-07-19 This book examines how research in construction economics and organization contributes to the achievement of the SDGs. Featuring selected contributions from the 11th Nordic Conference on Construction Economics and Organisation (CREON 2022) held in Copenhagen, Demark and Malmö, Sweden, the contributions of this book explore the ways in which research in construction economics and organization assists in building resilient infrastructure, fostering green innovations and contributes to sustainable economic growth. Each contribution relates to one or more individual SDG and describes how the research

contributes to the understanding of construction management and economics.
