Matemáticas básicas 2a. Edición ,2010 Este libro es parte de la colección e-Libro en BiblioBoard.

Matemáticas aplicadas a la economía Manuel Úbeda Flores,Manuel Ángel Gámez Cámara,2019-03-28 Este libro de texto está enfocado, fundamentalmente, como material docente de la asignatura de Matemáticas para los alumnos de los primeros cursos de los grados en: Administración y Dirección de Empresas; Economía; Finanzas y Contabilidad; y Marketing e Investigación de Mercados. El libro supone una buena herramienta de estudio encaminada al aprendizaje de las Matemáticas y algunas de sus aplicaciones en la Economía, proporcionando problemas resueltos relacionados con la materia. La obra está enfocada a la práctica, si bien aborda la teoría necesaria para resolver los ejercicios; de hecho, no se proporcionan demostraciones teóricas de los principales resultados. Se recogen desde problemas básicos que sirven de introducción y comprensión de las lecciones teóricas, hasta ejercicios de mayor complejidad y profundidad aplicados, en muchas ocasiones, a situaciones reales. De esta manera, se recurre frecuentemente a enunciados de tipo económico y empresarial que muestran al lector la relación entre ambas ciencias. Se desarrollan temas clásicos del Análisis Matemático —funciones reales de variable real, derivación e integración de funciones reales de variable real, series geométricas y funciones reales de varias variables reales— y del Álgebra Lineal —matrices, determinantes, sistemas de ecuaciones lineales y diagonalización—. Al final de cada capítulo se proponen una serie de ejercicios relacionados con el tema. Además, dedicamos un capítulo completo a la resolución de ejercicios de exámenes de diversas convocatorias, en concreto, aquellas comprendidas entre los años 2012 y 2018, ambas inclusive. Con ello, pretendemos que el alumno también efectúe su propia autoevaluación con la comprobación de sus propios resultados.

Cálculo Integral. La integral indefinida y métodos de integración Wilson, Velásquez Bastidas,2014-12-31 La presente nota de clases aborda el estudio de algunos conceptos fundamentales del cálculo integral de una variable real. En ella se exponen las ideas básicas de la diferencial y la antiderivada de una función, la integral indefinida, ecuaciones diferenciales con variables separables y se examinan los métodos de integración más relevantes. Cada uno de estos temas se presenta de forma precisa y no demasiado formal. La obra presenta una buena cantidad de ejemplos resueltos que servirán de modelo para el desarrollo de otros ejercicios propuestos (todos con su respuesta); además, ofrece una sección de

autoevaluación al final de cada capítulo, la cual ayudará al estudiante, por un lado, a valorar los progresos alcanzados durante el estudio y, por otro, a reforzar su incursión en el mundo del cálculo integral.

Curso Cero de Matemáticas y Física Gabriel Fernández Calvo, Hélia Serrano, Juan Belmonte Beitia, 2012-11-13 Libro destinado a estudiantes que han concluido el Bachillerato y desean acceder a Grados en Ingeniería. El libro está dividido en dos grandes bloques consistentes en diez capítulos de Matemáticas y otros diez capítulos de Física en los que se resumen temas esenciales que los estudiantes necesitarán en los primeros cursos de Grado. El libro contiene un gran número de ejemplos y problemas planteados y resueltos. Asimismo, para que el alumno pueda comprobar su nivel de asimilación del temario, se han añadido dos pruebas de progreso para los bloques de Matemáticas y Física.

Curso de Matemáticas para Química LASTRA SEDANO, ALBERTO, 2021-03-02 En este libro se presentan contenidos centrales en matemáticas enfocados hacia el desarrollo de un curso de matemáticas en estudios universitarios de química. El desarrollo teórico clásico queda motivado con ejemplos y se ilustra constantemente con figuras que clarifican las explicaciones. Al final de cada sección se propone un test para que el lector determine el nivel de comprensión alcanzado. Cada capítulo concluye con dos partes diferenciadoras que suponen un útil rasgo distintivo para este manual. Por un lado, se desarrolla una sección dedicada a la exposición de aplicaciones de los conceptos matemáticos trabajados en el contexto de la química, que sirvan de motivación. Por otro, se detallan prácticas virtuales de profundización que ayudan al lector a adaptar su aprendizaje a una docencia virtual, obtener soluciones a ejercicios propuestos y plantear otros nuevos sin necesidad de una asistencia directa. Alberto Lastra Sedano es Profesor Titular en la Universidad de Alcalá de Henares.

MATEMÁTICA 7 Editorial Grupo Fénix de Costa Rica, El presente texto pretende ser un material de apoyo en el proceso de enseñanza y aprendizaje de la matemática, exponiendo de forma didáctica los Conocimientos y Habilidades Específicas del Programa de Estudio de Matemática aprobados por el Consejo Superior de Educación de Costa Rica el 21 de mayo de 2012, considerando como referente metodológico el enfoque con base en la resolución de problemas. Después de muchos años de trabajo en las aulas, un grupo de profesionales en la Enseñanza de la Matemática nos propusimos elaborar una propuesta didáctica basada en la resolución de problemas que propicie el desarrollo de competencias matemáticas en el estudiante. Un problema que consideramos sustantivo en el desarrollo del Programa de Estudio, consiste en que algunos docentes guiados por otros textos, desconocen de forma fidedigna el Programa de Estudio con todos sus elementos que lo conforman, llámese estos, Conocimientos, Habilidades Específicas e Indicaciones Puntuales, provocando que se trabaje en el aula contenidos que no están en las directrices curriculares del MEP, o en su defecto, alcanzando niveles de profundización de temas que no se consideran “importantes” para las habilidades generales previstas para el educando en cada año de su respectivo ciclo. Es por este motivo, que hemos insertado textualmente dichos elementos (en algunos casos planteamos incluso los mismos

problemas que citan en las Indicaciones Puntuales, nunca con el afán de atribuirnos tales derechos de autor, por el contrario, respetamos y citamos que tales problemas pertenecen a los Programas de Estudio de Matemáticas del Ministerio de Educación de Costa Rica), de modo que sean el verdadero referente para las actividades de mediación que el docente proponga. En esta versión electrónica ampliada (VEA), se incluyen las respuestas a los ejercicios y problemas de cada uno de los Trabajos Cotidianos, así como enlaces a videos explicativos en YouTube de los contenidos matemáticos que hacen referencia las habilidades específicas del libro (se respetan los derechos de autor de cada video, por tanto no se han editado, y se convierten en un recurso de apoyo al docente y al estudiante).
