Wolfgang Guggemos

Producer Cooperatives as a New Mode of Production Bruno Jossa, 2014-02-05 The notion that there is no alternative to capitalism emerged after the fall of the Berlin Wall and made rapid headway due to increasing economic globalisation. More recently, this belief that there is no viable alternative has held firm despite the financial crisis, high unemployment levels and an ever-increasing gap between rich and poor. However, since the appearance of Benjamin Ward's seminal 1958 article, economic theorists have been developing a workable alternative: a system of self-managed firms. The core argument outlined in this book is that a well-organised system of producer cooperatives would give rise to a new mode of production and, ultimately, a genuinely socialist society. This argument is developed through three key steps. First, following on from Jaroslav Vanek's definition, it is argued that a 'Labour-Managed Firm', a firm which strictly segregates capital incomes from labour incomes, would implement a new production mode because it would reverse the pre-existing relation between capital and labour. Second, given that a system of these 'Labour-Managed Firm' cooperatives would reverse the capital-labour relationship, it is suggested that this would constitute a form of market socialism. Third, it is argued that compared to capitalism a system of producer cooperatives offers a wealth of advantages, including the potential for efficiency gains, the eradication of unemployment and the end of exploitation. Ultimately, this book concludes that self-management could take the place of central planning in Marxist visions for the future.

The Socialist Feminist Project Nancy Holmstrom, 2002-08 Socialist feminist theorizing is flourishing today. This collection is intended to show its strengths and resources and convey a sense of it as an ongoing project with a vital role to play in struggles for emancipation from all forms of oppression and exploitation today. Not every contribution to that project bears the same theoretical label, but the writings collected here share a broad aim of understanding women's subordination in a way which integrates class and sex—as well as aspects of women's identity such as race, ethnicity, and sexual orientation—with the aim of liberating women. Socialist Feminism brings together the most important recent socialist feminist writings on a wide range of topics: sex and reproduction, the family, wage labor, social welfare and public policy, the place of sex and gender in politics, and the philosophical foundations of socialist feminism. Although focusing on recent writings, the collection shows how these build on a struggle for women's liberation with earlier beginnings. These writings demonstrate the range, depth, and vitality of contemporary social feminist debates. They also testify to the distinctive

capacity of this project to address issues in a way that embraces collective experience and action while at the same time enabling each person to speak in their own personal voice.

Comparison of Economic Systems Alexander Eckstein, 2023-07-28 *Comparison of Economic Systems: Theoretical and Methodological Approaches* offers a profound exploration of the analytical frameworks and methodologies that define the field of comparative economics. Emerging from a University of Michigan research conference, the book charts the evolution of comparative economic systems as a discipline, initially focused on evaluating grand “isms” like capitalism and socialism. It shifts the focus toward a nuanced understanding of the traits, institutions, and decision-making mechanisms that influence economic behavior and performance across different systems. By examining theoretical models, such as those proposed by Koopmans, Montias, and Hurwicz, the volume highlights the interplay of variables like property relations, incentive structures, and resource allocation methods within mixed economic systems. The book seeks to bridge ideological labels with empirical data, fostering a more sophisticated analysis of economic systems in practice. This collection is not just an academic critique of economic ideologies but also a practical guide to comparing performance metrics like growth, efficiency, and stability across national economies. It delves into contemporary challenges, including decision-making in large bureaucracies, the role of public versus private ownership, and the impact of technological advancement on economic organization. With contributions from leading economists and case studies, such as Bergson's work on the Soviet Union and the United States, the book underscores the necessity of interdisciplinary approaches to refine the methodologies of comparative economics. It is an essential resource for economists and policy analysts seeking to understand the complexities of economic systems and their implications for global development.
