Phenotypic Integration Massimo Pigliucci,Katherine Preston,2004-04-01 A new voice in the nature-nurture debate can be heard at the interface between evolution and development. Phenotypic integration--or, how large numbers of characteristics are related to make up the whole organism, and how these relationships evolve and change their function--is a major growth area in research, attracting the attention of evolutionary biologists, developmental biologists, and geneticists, as well as, more broadly, ecologists, physiologists, and paleontologists. This edited collection presents much of the best and most recent work the topic.

Plant Mutagenesis and Crop Improvement Nitish Kumar,2024-02-23 Crop improvement using classically induced mutagenesis is now well standardized. Many new promising varieties of different crops have been successfully developed worldwide using both physical and chemical mutagens. Voluminous literature is now available on basic and applied aspects of mutagenesis. The mutation technique has been refined and holds the promise of generating much wider and more desirable variability than classical breeding. Recent advances in technology combined with classical mutation breeding offer new and exciting challenges for the development of new varieties. A global inventory of induced mutagenesis activities for crop improvement is required. This book covers both basic and applied aspects of mutation and its impact on various crops: it is extremely well prepared and contains a huge volume of information accumulated using classically induced mutagenesis on different crops in different countries. Three key features: Describes the importance of induced mutation in crop plant research and its application to production Highlights new advances in the understanding of plant mutagenesis in crop improvement Contains contributions from major leaders in the field of plant mutation research This volume brings together all the important and relevant literature in the field. It provides a complete account of the mutation breeding of crops, presenting conclusions about the value of the method, its possibilities, limitations, and shortcomings, and the possible difficulties of further application in various crops. The initial chapters deal with the interactions between mutagenic treatment and plant material, such as aspects of mutagenic treatment, postirradiation behavior of shoot apices, and adventitious bud techniques. All available literature is then discussed crop by crop and critically evaluated. This will serve as an extremely comprehensive guide for researchers, teachers, students, and individuals who are interested in using induced mutagenesis as a tool for crop improvement.

Seed Dormancy Angel J. Matilla, 2020-11-13 The appearance of the new generation in higher plants is ensured by the presence of viable seeds in the mother plant. A good number of signaling networks is necessary to provoke germination. Phytohormones play a key role in all stages of seed development, maturation, and dormancy acquisition. The dormancy of some seeds can be relieved through a tightly regulated process called after-ripening (AR) that occurs in viable seeds stored in a dry environment. Although ABA is directly involved in dormancy, recent data suggest that auxin also plays a preponderant role. On the other hand, the participation of reactive oxygen species (ROS) in the life of the seed is becoming increasingly confirmed. ROS accumulate at different stages of the seed's life and are correlated with a low degree of dormancy. Thus, ROS increase upon AR and dormancy release. In the last decade, the advances in the knowledge of seed life have been noteworthy. In this Special Issue, those processes regulated by DOG1, auxin, and nucleic acid modifications are updated. Likewise, new data on the effect of alternating temperatures (AT) on dormancy release are here present. On the one hand, the transcriptome patterns stimulated at AT that encompasses ethylene and ROS signaling and metabolism together with ABA degradation were also discussed. Finally, it was also suggested that changes in endogenous γ -aminobutyric acid (GABA) may prevent seed germination.

Psychobiology of Behaviour Kostas N. Fountoulakis, Ioannis Nimatoudis, 2019-07-26 The book provides a comprehensive reference on the neurobiological understanding of behaviour, how behaviour is regulated by the brain, and how such behaviours in turn influence the brain. The work offers an introduction to neural systems and genetics/epigenetics, followed by detailed study of a wide range of behaviours – temperament and personality, instincts and drives, memory and cognitive function, sex and sexual differentiation, ethology and evolutionary biology, aging, drug abuse and other problematic behaviors, psychophysiology and ultimately the links to biological psychiatry and psychopharmacology. Research findings on the neural basis of social behaviour are integrated across different levels of analysis, from molecular neurobiology and neural systems/behavioural neuroscience to fMRI imaging data on human social behaviour. The content covers research on both normal and abnormal behaviours, as well as developmental aspects. The target audience includes psychiatrists, neurologists, nurses, psychologists and all researchers and advanced students in behavioural, social and developmental neuroscience, as well as clinical neuroscientists.

Nutritional Health Norman J. Temple, Ted Wilson, David R. Jacobs, Jr., George A. Bray, 2023-05-10 This fourth edition brings together a diverse range of experts in nutrition-related areas to discuss recent thinking and discoveries in nutrition, especially in relation to topics that have the greatest capacity to improve human health and nutritional implementation. An overview of nutrition science in the third decade of the twenty-first century reveals that much water has flown under the bridge of the advancing river that is nutrition research and practice. With these large accumulations of developments in the field of nutrition, the need for a new edition of this book is obvious. Our vastly improved nutrition knowledge gives us the capability of preventing a sizable fraction of the chronic diseases that afflict the people of our world, but only if these discoveries can be translated into effective action at the population level. Nutritional Health endeavours to address the needs of those who would most benefit from up-to-date information on key areas in the field of nutrition. The book starts with a discussion of the nature of nutritional research then moves into an overview of the most important aspects of the complex interactions between diet, its nutrient components, and their impacts on disease states, and on those health conditions that increase the risk of chronic diseases. Parts three and four discuss diet and include new chapters on the Mediterranean diet, the DASH diet, the flexitarian diet, and the low-carbohydrate diet. The final two parts of the book discuss emerging trends in nutrition science, such as gut microbiome and sustainable diet, and areas of controversy in nutrition, such as the influence of the food industry and dietary supplements. Up to date and comprehensive, Nutritional Health: Strategies for Disease Prevention, Fourth Edition offers physicians, dietitians, and nutritionists a practical, data-driven, integrated resource to help evaluate the critical role of nutrition.

Human Evolutionary Psychology Louise Barrett, Robin Dunbar, John Lycett, 2002-02-17 Why do people resort to plastic surgery to look young? Why are stepchildren at greatest risk of fatal abuse? Why do we prefer gossip to algebra? Why must Dogon wives live alone in a dark hut for five days a month? Why are young children good at learning language but not sharing? Over the past decade, psychologists and behavioral ecologists have been finding answers to such seemingly unrelated questions by applying an evolutionary perspective to the study of human behavior and psychology. Human Evolutionary Psychology is a comprehensive, balanced, and readable introduction to this burgeoning field. It combines a sophisticated understanding of the basics of evolutionary theory with a solid grasp of empirical case studies. Covering not only such traditional subjects as kin selection and mate choice, this text also examines more complex understandings of marriage practices and inheritance rules and the way in which individual action influences the structure of societies and

aspects of cultural evolution. It critically assesses the value of evolutionary explanations to humans in both modern Western society and traditional preindustrial societies. And it fairly presents debates within the field, identifying areas of compatibility among sometimes competing approaches. Combining a broad scope with the more in-depth knowledge and sophisticated understanding needed to approach the primary literature, this text is the ideal introduction to the exciting and rapidly expanding study of human evolutionary psychology.

Computational Biology for Stem Cell Research Pawan Raghav,Rajesh Kumar,Anjali Lathwal,Navneet Sharma,2024-01-12
Computational Biology for Stem Cell Research is an invaluable guide for researchers as they explore HSCs and MSCs in computational biology. With the growing advancement of technology in the field of biomedical sciences, computational approaches have reduced the financial and experimental burden of the experimental process.
