## **Evaluation of the Impacts of Mutual Coupling Between Transmission Lines on Impedance Relay Protection**

**Settings** Khethiwe Nofuya, 2016 Evaluates the impact of mutual coupling between transmission lines running in parallel based on the effective reaches of the measurements of impedance relays. Other variables such as line length and impact of sources do not exert much influence on relay measurements. The critical distance between circuits per voltage level where mutual coupling is effective was identified and different types of network configurations from the existing Eskom transmission network were identified. The ESKOM transmission network is modelled and simulated in the DIgSILENT PowerFactory. The performance of impedance relay model is evaluated based on the network model in DIgSilent.

**Metamaterial Surface Plasmon-Based Transmission Lines and Antennas** Amin Kianinejad, 2018-03-30 This thesis proposes a reliable and repeatable method for implementing Spoof Surface Plasmon (SSP) modes in the design of various circuit components. It also presents the first equivalent circuit model for plasmonic structures, which serves as an insightful guide to designing SSP-based circuits. Today, electronic circuits and systems are developing rapidly and becoming an indispensable part of our daily life; however the issue of compactness in integrated circuits remains a formidable challenge. Recently, the Spoof Surface Plasmon (SSP) modes have been proposed as a novel platform for highly compact electronic circuits. Despite extensive research efforts in this area, there is still an urgent need for a systematic design method for plasmonic circuits. In this thesis, different SSP-based transmission lines, antenna feeding networks and antennas are designed and experimentally evaluated. With their high field confinement, the SSPs do not suffer from the compactness limitations of traditional circuits and are capable of providing an alternative platform for the future generation of electronic circuits and electromagnetic systems.

Design of Nonplanar Microstrip Antennas and Transmission Lines Kin-Lu Wong, 2004-03-24 A one-stop reference to the design and analysis of nonplanar microstrip structures. Owing to their conformal capability, nonplanar microstrip antennas and transmission lines have been intensely investigated over the past decade. Yet most of the accumulated research has been too scattered across the literature to be useful to scientists and engineers working on these curved structures. Now, antenna expert Kin-Lu Wong compiles and organizes the latest research results and other cutting-edge developments into an extensive survey of the characteristics of microstrip antennas mounted on canonical nonplanar surfaces. Demonstrating a

variety of theoretical techniques and deducing the general characteristics of nonplanar microstrip antennas from calculated results, Wong thoroughly addresses the problems of cylindrical, spherical, and conical structures and gives readers powerful design and optimization tools. Up-to-date topics range from specific applications of spherical and conical microstrip arrays to the curvature effects on the analysis of cylindrical microstrip lines and coplanar waveguides. With 256 illustrations and an exhaustive list of references, *Design of Nonplanar Microstrip Antennas and Transmission Lines* is an indispensable guide for antenna designers in wireless and personal communications and in radar systems, and an invaluable reference for researchers and students interested in this important technology.

Transmission Line Protection Using Digital Technology Vijay H. Makwana, Bhavesh R. Bhalja, 2016-06-21 This book develops novel digital distance relaying schemes to eliminate the errors produced by the conventional digital distance relays while protecting power transmission lines against different types of faults. These include high resistance ground faults on single infeed transmission lines; high resistance ground faults on double infeed transmission lines; simultaneous open conductor and ground fault on double infeed transmission lines; inter-circuit faults on parallel transmission lines; simultaneous open conductor and ground fault on series compensated parallel transmission lines; inter-circuit faults on series compensated parallel transmission lines; and phase faults on series compensated double infeed transmission lines. This monograph also details suggestions for further work in the area of digital protection of transmission lines. The contents will be useful to academic as well as professional researchers working in transmission line protection.

Power Division, 1982 Summary: school teacher John Scopes is arrested for advocating Darwin's theory of evolution to his pupils in violation of a stifling Tennessee State law banning anything that denies the divine creation of man taught by the Bible. The case is quickly taken up by a cynical newspaperman whose interests are heightened when the champion of the fundamentalists and three-time presidential candidate is named prosecutor. In retaliation the newspaper hires a self-styled agnostic, and one of the leading lawyers of the century to defend Scopes.
