The Governance of Artificial Intelligence in the “Autonomous City” Federico Cugurullo,Tan Yigitcanlar,Xiaoling Zhang,Vincent J. Del Casino Jr.,Natalie Marie Gulsrud,Sarah Barns,2023-10-18 Artificial intelligence (AI) is now mediating, and in some cases seen to be controlling, key urban services and infrastructures, thus becoming a prominent feature of the contemporary city. As portrayed in recent studies, the “autonomous city” can be understood as a city where urban artificial intelligences perform tasks and take on roles which have traditionally been the domain of humans. At stake in these debates are questions related to the meaning and ongoing role of intelligence, for both humans and machines. While autonomous cars

transport people, service robots run shops, drones deliver goods and city brains govern entire cities, humans are redefining the meaning of what “smart” means in the city and what role the human being may play in future urban spaces. With humans shifted to new sectors of the economy or pushed aside by algorithms and robotic agents creating new ways of seeing and governing the city, we raise the question as to whether or not cities are becoming more autonomous from human experience in the sense that their operation does not rely as much on human inputs anymore.
