

The Sound Horror Movie

Didier Musso

Sound in the American Horror Film Jeffrey Bullins, 2024-07-22 The crack of thunder, a blood-curdling scream, creaking doors, or maybe complete silence. Sounds such as these have helped frighten and startle horror movie audiences for close to a century. Listen to a Universal classic like *Dracula* or *Frankenstein* and you will hear a very different soundtrack from contemporary horror films. So how did we get from there to here? What scared audiences then compared to now? This examination of the horror film's soundtrack builds on film sound and genre scholarship to demonstrate how horror, perhaps more than any other genre, utilizes sound to manipulate audience response. Beginning with the Universal pictures of the early 1930s and moving through the next nine decades, it explores connections and contrasts throughout the genre's technical and creative evolution. New enthusiasts or veteran fans of such varied films as *The Mummy*, *Cat People*, *The Day the Earth Stood Still*, *Psycho*, *Halloween*, *A Nightmare on Elm Street*, *Scream*, *The Conjuring*, *Paranormal Activity*, and *A Quiet Place* will find plenty to explore, and perhaps a new sonic appreciation, within these pages.

Media Computing Chitra Dorai, Svetha Venkatesh, 2012-12-06 Traditionally, scientific fields have defined boundaries, and scientists work on research problems within those boundaries. However, from time to time those boundaries get shifted or blurred to evolve new fields. For instance, the original goal of computer vision was to understand a single image of a scene, by identifying objects, their structure, and spatial arrangements. This has been referred to as image understanding. Recently, computer vision has gradually been making the transition away from understanding single images to analyzing image sequences, or video understanding. Video understanding deals with understanding of video sequences, e. g. , recognition of gestures, activities, facial expressions, etc. The main shift in the classic paradigm has been from the recognition of static objects in the scene to motion-based recognition of actions and events. Video understanding has overlapping research problems with other fields, therefore blurring the fixed boundaries. Computer graphics, image processing, and video databases have obvious overlap with computer vision. The main goal of computer graphics is to generate and animate realistic looking images, and videos. Researchers in computer graphics are increasingly employing techniques from computer vision to generate the synthetic imagery. A good example of this is image-based rendering and modeling techniques, in which geometry, appearance, and lighting is derived from real images using computer vision techniques. Here the shift is from synthesis to analysis followed by synthesis.
