Brue, 2005 *A Parent's Guide to Special Education* offers invaluable information and a positive vision of special education that will help parents through the potentially overwhelming processes of catch-all programs that encompasses dozens of learning challenges: developmental delay learning and physical disabilities emotional disturbance retardation autism, and others. Filled with practical recommendations, sample forms, and enlightening examples, this is a priceless resource for helping every child learn.

The Social Psychology of the Child with Epilepsy Christopher Bagley, 2015-06-19 When this title was first published in 1971, there were about 300, 000 people with epilepsy in England and Wales. Nearly one-third of them were children. This book is an integrated review of how epileptic children behaved, and of how they were regarded by parents, teachers and peers at the time. Written by a sociologist with a training in psychology, human biology and education, the book draws on several disciplines – sociology, psychology, biology – in seeking to understand the complex determinants of deviant behaviour in children with epilepsy. The author considers in detail the lives of 118 epileptic children, bringing together and analysing a wide range of measurements of behaviour, social relations and abnormalities of brain function. He discusses how the children fare in school, and how epilepsy affects both the teacher's perception of the child and the child's scholastic performance. The dearth of medical centres which could diagnose and treat epilepsy at the time is examined, and hospital use according to parents' social class is analysed. The author looks at the role of parents of epileptic children and shows that their attitude to epilepsy is of major importance for the child's adjustment. The prejudice to which epileptic children and adolescents were subjected by the world at large is chronicled in detail. Finally the author considers how his empirical material makes a contribution to the theoretical problem of integrating sociology, psychology and biology into a single discipline concerned with the explanation of human social behaviour.

Psychology James S. Nairne, Dawn M. McBride, 2021-12-15 James S. Nairne and new co-author Dawn M. McBride's best-selling *Psychology*, Seventh Edition offers a learning framework that follows the scientific process, connecting psychological concepts with common, everyday experiences. By first considering the purpose of psychological concepts and processes, students are prepared to understand when, why and how psychological phenomena occur in common human moments. Empirically based pedagogy—including concept reviews, self-tests, critical thinking activities, and active chapter

summaries—are included throughout to promote retention, retrieval practice, and deeper thinking while guiding students to develop scientific literacy. This title is accompanied by a complete teaching and learning package.

Child Development Laura E. Levine, Joyce Munsch, 2021-01-09 In the topically organized *Child Development: An Active Learning Approach*, Fourth Edition, authors Laura E. Levine and Joyce Munsch take students on an active journey toward understanding children and their development. Active Learning activities integrated throughout the text capture student interest and turn reading into an engaged learning process. Through the authors' active learning philosophy, students are challenged to test their knowledge, confront common misconceptions, relate the material to their own experiences, and participate in real-world activities independently and with children. Because consuming research is equally important in the study of child development, *Journey of Research* features provide both historical context and its links to today's cutting-edge research studies. Students will discover the excitement of studying child development while gaining skills they can use long after course completion. This title is accompanied by a complete teaching and learning package.

Psychology Library Editions: Social Psychology Various, 2021-07-09 *Psychology Library Editions: Social Psychology* (30-volume set) brings together an eclectic mix of titles from a wealth of authors with diverse backgrounds, seeking to understand human behaviour and interaction from a socio-psychological perspective. The series of previously out-of-print titles, originally published between 1908 and 1993, includes those from some authors considered to be founders of social psychology and traces the development of the subject from its early foundations.

The Measurement of Intelligence Lewis Madison Terman, 1916 The constant and growing use of the Binet-Simon intelligence scale in public schools, institutions for defectives, reform schools, juvenile courts, and police courts is sufficient evidence of the intrinsic worth of the method. It is generally recognized, however, that the serviceableness of the scale has hitherto been seriously limited, both by the lack of a sufficiently detailed guide and by a number of recognized imperfections in the scale itself. The Stanford revision and extension has been worked out for the purpose of correcting as many as possible of these imperfections, and it is here presented with a rather minute description of the method as a whole and of the individual tests. The aim has been to present the explanations and instructions so clearly and in such an untechnical form as

to make the book of use, not only to the psychologist, but also to the rank and file of teachers, physicians, and social workers. More particularly, it is designed as a text for use in normal schools, colleges, and teachers' reading-circles. (PsycINFO Database Record (c) 2004 APA, all rights reserved).
