Understanding Airspace, Objects, and Their Effects on Airports, 2010 ACRP Report 38: Understanding Airspace, Objects, and Their Effects on Airports provides a comprehensive description of the regulations, standards, evaluation criteria, and processes designed to protect the airspace surrounding airports. Aviation practitioners, local planning and zoning agencies, and developers all have a need to understand and apply the appropriate airspace design and evaluation criteria to ensure a safe operating environment for aircraft, to maintain airport operational flexibility and reliability, without unduly restricting desirable building development and attendant economic growth in the surrounding community.

Air Defence Identification Zones and Maritime Frontier Disputes Stephanie Stipsits, 2025-04-03 The book clarifies key conceptual issues surrounding ADIZs and their influence on maritime territorial disputes in the context of the Senkaku/Diaoyu island dispute. It uniquely offers a detailed analysis of national legislation on ADIZ, suggesting that ADIZ might be evolving customary international law. The book demonstrates that aerial zones do not necessarily violate the freedom of overflight, as the airspace above the EEZ may have a dual legal status, allowing for sui generis zones. Furthermore, it shows that ADIZs do not conflict with fundamental principles of international air law or the ICAO-Council's authority to establish rules in international airspace.

Linguistic Dimensions of Crisis Talk Claudia Sassen, 2005-08-31 This book offers an HPSG-based discourse grammar for a controlled language (Air Traffic Control) that allows the identification of well-formed discourse patterns. A formalisation of discourse theoretical structures that occur especially in crisis situations that involve potential aviation disasters is introduced. Of particular importance in this context are discourse sequences that help secure uptake among the crew and between crew and tower in order to coordinate actions that might result in avoiding a potential disaster. In order to describe the relevant phenomena, an extended HPSG formalism is used. The extension concerns the capability of modelling speech acts as proposed by Searle & Vanderveken (1985). The grammar is modelled by employing XML as a denotational semantics and is applied to the corpus data. This work thus lays the foundation for the automatic recognition of discourse structures in aviation communication.

Aeronautical Information Manual Federal Aviation Administration, 2019-03-05 This PRINT REPLICA contains the FAA Aeronautical Information Manual (AIM) Basic with Changes 1, 2 and 3, dated 28 February 2014 This is Book 2. This is a very useful reference book that is normally printed in a small format (6 by 9 inch) and can be difficult to read. We decided to print this a full 8 1/2 by 11 inches so the text is much larger. It is a print replica so the content is unchanged, only larger. However, there were two big changes in format which will hopefully make the book more useful. First of all, we broke it into two books. Book 1 contains Chapters 1 thru 5, and Book 2 contains Chapters 6 thru 10. Some people won't need both books. The other change is where the explanation of changes is located. Normally, the Explanation of Changes is located at the very beginning, but we doubt it gets much use, so we relocated that to the very back of Volume 2. We hope you find this more useful than a small, thick book with small text. If so, please leave a positive review on Amazon.com. If you have any suggestions or would like to see this or any other book printed differently, please send us a message on our website USGOVPUB.com.
