Cells, Tissue, and Skin, Third Edition Donna Bozzone, Douglas Light, 2021-08-01 Cells are the smallest units capable of sustaining life, and they make up virtually every aspect of the human body. From the strands of hair at the top of the head to the nails on fingers and toes, every structure of the human body is composed of cells. Groups of cells form tissues and organs, which allow the body to function as an organized system. Skin, the body's largest organ, forms a waterproof barrier that provides protection against invading microorganisms and acts as a sensory and thermoregulatory structure. Cells, Tissues, and Skin, Third Edition explores the properties of each of these components in our bodies. Packed with full-color photographs and illustrations, this absorbing book provides students with sufficient background information through references, websites, and a bibliography.

*Rethinking History, Science, and Religion* Bernard Lightman, 2019-10-03 The historical interface between science and religion was depicted as an unbridgeable conflict in the last quarter of the nineteenth century. Starting in the 1970s, such a conception was too simplistic and not at all accurate when considering the totality of that relationship. This volume evaluates the utility of the “complexity principle” in past, present, and future scholarship. First put forward by historian John Brooke over twenty-five years ago, the complexity principle rejects the idea of a single thesis of conflict or harmony, or integration or separation, between science and religion. *Rethinking History, Science, and Religion* brings together an interdisciplinary group of scholars at the forefront of their fields to consider whether new approaches to the study of science and culture—such as recent developments in research on science and the history of publishing, the global history of science, the geographical examination of space and place, and science and media—have cast doubt on the complexity thesis, or if it remains a serviceable historiographical model.
