Civil Engineer's Handbook of Professional Practice Karen Lee Hansen, Kent E. Zenobia, 2024-11-18 A single-source guide to the professional practice of civil engineering Civil Engineer's Handbook of Professional Practice, Second Edition assists students and practicing and professional engineers in addressing the many challenges they face. This guide expands on the practical skills defined by the American Society of Civil Engineers' (ASCE's) Civil Engineering Body of Knowledge (CEBOK) and provides illuminating techniques, quotes, example problems/solutions, case studies, and valuable information that engineers encounter in the real world. Including critical information on project management, leadership, and communication, this powerful resource distills the Accreditation Board for Science and Technology's (ABET's) requirements for a successful career and licensure. Due to the large amount of information that is presented in an easy-to-digest way, this handbook enables civil engineers to be competitive at an international level, building on their traditional strengths in technology and science while also providing the ability to master the business of civil engineering. In this second edition, readers will find: Modern business topics such as design thinking, affirmative action, equal opportunity and diversity, negotiation, health and safety requirements, construction management, body language interpretation skills, project management, and scheduling Key discussions of executing a professional commission, the engineer's role in project development, professional engagement, and ethics Updated examples of everyday challenges for civil engineers, including defining the project, establishing objectives and innovative approaches, identifying resources and constraints, preparing a critical path schedule, quality control, and orchestrating project delivery The latest applications of emerging technologies, globalization impacts, and new sustainability applications for civil engineers Examples of a civil engineering request for proposal and corresponding workplan and feasibility study, technical report, specification, contracts, and scheduling and cost control tools Providing comprehensive coverage and in-depth guidance from leading industry and academic professionals, Civil Engineer's Handbook of Professional Practice, Second Edition is a valuable reference for early-career and experienced civil engineers alike. It is also highly appropriate for upper-level undergraduate and graduate courses in Professional Practice and Engineering Project Management. Instructors have access to an instructor's manual via the book's companion website.

Technical Report Writing Today Daniel G. Riordan, Steven E. Pauley, 2005 Technical Report Writing Today provides thorough coverage of technical writing basics, techniques, and applications. Through a practical focus with varied examples

and exercises, students internalize the skills necessary to produce clear and effective documents and reports. Project worksheets help students organize their thoughts and prepare for assignments, and Focus boxes highlight key information and recent developments in technical communication. Extensive individual and collaborative exercises expose students to different kinds of technical writing problems and solutions. Annotated student examples—more than 100 in all—illustrate different writing styles and approaches to problems. Numerous short and long examples throughout the text demonstrate solutions for handling writing assignments in current career situations. The four-color artwork in the chapter on creating visuals keeps pace with contemporary workplace capabilities. The Ninth Edition offers many new examples, exercises, samples, and articles, the latest information on using electronic resumes and documenting electronic sources, more on group work, and new Ethics and Globalization sidebars that highlight these two important topics in the technical communication field. Chapter exercises have been labeled to guide students in various goals: You create, You analyze, You revise, and Group. In this revision, the authors have focused on streamlining and updating key chapters, rather than on substantially changing the text's effective organization. Chapter 1: Definition of Technical Writing has been thoroughly revised to include complete sections on ethics and globalization. Theoretical sections have been updated to include current thinking about the role of communication between people. New exercises and examples are included. Chapter 2: Profiling Audiences, has been completely revised to feature current thinking about defining audiences, including an emphasis on the tasks that audiences must perform after reading, and a section on creating audience profiles. Worksheets have been revised, and a section on meeting quality benchmarks has been added. Chapter 3: The Technical Writing Process, substantially updated, offers a current description of the document creation process and includes recent thinking on information design. Chapter 6: Designing Pages, has been revised and simplified to make the complex process of page design easier for students to grasp. Chapter 12: Memorandums and Informal Reports, heavily revised, now includes more emphasis on, and new examples of, the IMRD report format. The chapter also includes a focus section with an expanded treatment of email. Chapter 15: Recommendation and Feasibility Reports presents a new feasibility report created by a small business to determine whether or not to market an item. Chapter 18: Oral Presentations now focuses on PowerPoint. The theory of oral reports is expanded to include recent criticisms of PowerPoint presentations and advice on creating effective presentations. Appendixes include A Brief Handbook (Appendix A), focusing on the sentence, punctuation, and mechanics issues most relevant to technical writing; and Documenting Sources (Appendix B), covering the most up-to-date APA and MLA methods for documenting print and electronic sources. The text-specific instructor web site features such resources as sample syllabi, a transition guide, an assessment guide, and chapter-by-chapter teaching suggestions. The student site offers additional student samples (including web sites built by their peers), cha

Readings in Machine Learning Jude W. Shavlik, Thomas Glen Dietterich, 1990 The ability to learn is a fundamental

characteristic of intelligent behavior. Consequently, machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s. The 1980s saw tremendous growth in the field, and this growth promises to continue with valuable contributions to science, engineering, and business. Readings in Machine Learning collects the best of the published machine learning literature, including papers that address a wide range of learning tasks, and that introduce a variety of techniques for giving machines the ability to learn. The editors, in cooperation with a group of expert referees, have chosen important papers that empirically study, theoretically analyze, or psychologically justify machine learning algorithms. The papers are grouped into a dozen categories, each of which is introduced by the editors.

*Search for the Higgs Boson Produced in Association with Top Quarks with the CMS Detector at the LHC* Cristina Martin Perez, 2022-02-09 In this work, the interaction between the Higgs boson and the top quark is studied with the proton-proton collisions at 13 TeV provided by the LHC at the CMS detector at CERN (Geneva). At the LHC, these particles are produced simultaneously via the associate production of the Higgs boson with one top quark (tH process) or two top quarks (ttH process). Compared to many other possible outcomes of the proton-proton interactions, these processes are very rare, as the top quark and the Higgs boson are the heaviest elementary particles known. Hence, identifying them constitutes a significant experimental challenge. A high particle selection efficiency in the CMS detector is therefore crucial. At the core of this selection stands the Level-1 (L1) trigger system, a system that filters collision events to retain only those with potential interest for physics analysis. The selection of hadronically decaying  $\tau$  leptons, expected from the Higgs boson decays, is especially demanding due to the large background arising from the QCD interactions. The first part of this thesis presents the optimization of the L1  $\tau$  algorithm in Run 2 (2016-2018) and Run 3 (2022-2024) of the LHC. It includes the development of a novel trigger concept for the High-Luminosity LHC, foreseen to start in 2027 and to deliver 5 times the current instantaneous luminosity. To this end, sophisticated algorithms based on machine learning approaches are used, facilitated by the increasingly modern technology and powerful computation of the trigger system. The second part of the work presents the search of the tH and ttH processes with the subsequent decays of the Higgs boson to pairs of  $\tau$  lepton, W bosons or Z bosons, making use of the data recorded during Run 2. The presence of multiple particles in the final state, along with the

low cross section of the processes, makes the search an ideal use case for multivariant discriminants that enhance the selectivity of the signals and reject the overwhelming background contributions. The discriminants presented are built using state-of-the-art machine learning techniques, able to capture the correlations amongst the processes involved, as well as the so-called Matrix Element Method (MEM), which combines the theoretical description of the processes with the detector resolution effects. The level of sophistication of the methods used, along with the unprecedented amount of collision data analyzed, result in the most stringent measurements of the tH and ttH cross sections up to date.

How to Write Technical Reports Lutz Hering, Heike Hering, 2010-10-14 Technical Reports are usually written according to general standards, corporate - sign standards of the current university or company, logical rules and practical - periences. These rules are not known well enough among engineers. There are many books that give general advice in writing. This book is specialised in how to write Technical Reports and addresses not only engineers, but also natural sci- th tists, computer scientists, etc. It is based on the 6 edition published in 2008 by st Vieweg in German and is now published as 1 edition by Springer in English. Both authors of the German edition have long experience in educating en- neers at the University of Applied Sciences Hannover. They have held many l- tures where students had to write reports and took notes about all positive and negative examples that occurred in design reports, lab work reports, and in theses. Prof. Dr. Lutz Hering has worked for VOLKSWAGEN and DAIMLER and then changed to the University of Applied Sciences Hannover where he worked from 1974 until 2000. He held lectures on Technical Drawing, Construction and Design, CAD and Materials Science. Dr. Heike Hering worked nine years as a Technical Writer and was responsible for many CAD manuals in German and English. She is now employed at TÜV NORD Akademie, where she is responsible for E-Learning projects, technical documentation and software training and supervises students who are writing their theses. Signal Processing and Machine Learning for Biomedical Big Data Ervin Sejdic, Tiago H. Falk, 2018-07-04 Within the healthcare domain, big data is defined as any ``high volume, high diversity biological, clinical, environmental, and lifestyle information collected from single individuals to large cohorts, in relation to their health and wellness status, at one or several time points." Such data is crucial because within it lies vast amounts of invaluable information that could potentially change

a patient's life, opening doors to alternate therapies, drugs, and diagnostic tools. *Signal Processing and Machine Learning for Biomedical Big Data* thus discusses modalities; the numerous ways in which this data is captured via sensors; and various sample rates and dimensionalities. Capturing, analyzing, storing, and visualizing such massive data has required new shifts in signal processing paradigms and new ways of combining signal processing with machine learning tools. This book covers several of these aspects in two ways: firstly, through theoretical signal processing chapters where tools aimed at big data (be it biomedical or otherwise) are described; and, secondly, through application-driven chapters focusing on existing applications of signal processing and machine learning for big biomedical data. This text aimed at the curious researcher working in the field, as well as undergraduate and graduate students eager to learn how signal processing can help with big data analysis. It is the hope of Drs. Sejdic and Falk that this book will bring together signal processing and machine learning researchers to unlock existing bottlenecks within the healthcare field, thereby improving patient quality-of-life. Provides an overview of recent state-of-the-art signal processing and machine learning algorithms for biomedical big data, including applications in the neuroimaging, cardiac, retinal, genomic, sleep, patient outcome prediction, critical care, and rehabilitation domains. Provides contributed chapters from world leaders in the fields of big data and signal processing, covering topics such as data quality, data compression, statistical and graph signal processing techniques, and deep learning and their applications within the biomedical sphere. This book's material covers how expert domain knowledge can be used to advance signal processing and machine learning for biomedical big data applications.
