Las TIC en las aulas de enseñanza superior José Francisco Durán Medina, 2018-11-01 La Universidad se encuentra en pleno progreso desde su tiempo cero; de hecho, halla su carta de naturaleza en la necesidad de mejorar el medio que la nutre y por y para el que existe: la sociedad. Rompiendo las viejas membranas de la enseñanza imperante hasta el siglo XX, las nuevas (r)evoluciones de contenidos y fórmulas, como lo fuera el EEES (o Plan Bolonia) o las TIC, suponen la respuesta a esas actualizadas necesidades docentes y curriculares. Las Humanidades, las Artes, las Ciencias sociales y la Docencia se reescriben, hibridando, gracias a los nuevos lenguajes y herramientas, contenidos otrora lejanos. La nueva Academia es poliédrica, ínter y multi disciplinar, dialógica y colaborativa. En este estado de cosas la colección Herramientas universitarias se erige como atalaya para agrupar bajo su égida al más amplio conjunto de autores internacionales que iluminen, con sus investigaciones, la panoplia de contenidos que conforman el mundo científico donde nace el futuro. La calidad intelectual queda refrendada mediante la rigurosa implantación del habitual proceso garante, basado en la revisión o arbitraje por pares ciegos (peer review) de estos capítulos, sin renunciar a la más antigua tradición universitaria que obliga al opositor de lo publicado, a soportar el peso de la prueba. Este doble modelo de evaluación, a priori y a posteriori, garantiza la calidad del contenido de los textos de esta colección. Pertenecer a la Academia, y en ello radica orgullosamente su valía, supone que todos sus miembros responden a una ambición irrenunciable: mostrar que el conjunto de sus trabajos conforma la vanguardia científica internacional. El texto que aquí se presenta está auspiciado por el Fórum Internacional de Comunicación y Relaciones Públicas (Fórum XXI), la Sociedad Española de Estudios de la Comunicación Iberoamericana (SEECI), la Asociación cultural Historia de los Sistemas Informativos y el Grupo Complutense (no 931.791) de Investigación en Comunicación Concilium.

Quality Assurance in Higher Education Stamelos Georgios, K.M. Joshi, Saeed Paivandi, 2017-01-30 The significant growth of number of students enrolled in tertiary education institutions in the recent past decades has caused an

unprecedented expansion of higher education systems. The rapid and constant social, economic and technological mutations and international competition make the importance of qualitatively well-educated citizenry and labor forces very decisive. Globalization has developed a powerful impact on the development of higher education and imposes new challenges for the organization (standards, financing, regulations). Systems of higher education tend to detach from the national models and adopt a more global orientation. The implementation of quality assurance is one of the recent and most decisive transformations of higher education. Different higher education systems are trying to develop assessment tools (internal and external) to improve the quality of teaching, research and extension activities, and these are either based on experiences of selected countries or are extensively country specific. The quality assurance procedures that were often dependent on national directorial traditions have gradually tended to converge and led to a setup of common tools and standards. Countries under a centralized system tend to impose a uniform and general model while decentralized systems give greater freedom to universities to set up their own quality. International rankings of universities also contribute to impose a set of transnational standards and values, which is also being considered as indicative by the stakeholders. The present book tries to look at the quality assurance mechanism, international rankings and its impact in both absolute and comparative fashion in context of 11 countries from different parts of the world.

Fractional-order Systems and Controls Concepción A. Monje, YangQuan Chen, Blas M. Vinagre, Dingyu Xue, Vicente Feliu-Batlle, 2010-09-28 Fractional-order Systems and Controls details the use of fractional calculus in the description and modeling of systems, and in a range of control design and practical applications. It is largely self-contained, covering the fundamentals of fractional calculus together with some analytical and numerical techniques and providing MATLAB® codes for the simulation of fractional-order control (FOC) systems. Many different FOC schemes are presented for control and dynamic systems problems. Practical material relating to a wide variety of applications is also provided. All the control schemes and applications are presented in the monograph with either system simulation results or real experimental results, or both. Fractional-order Systems and Controls provides readers with a basic understanding of FOC concepts and methods, so they can extend their use of FOC in other industrial system applications, thereby expanding their range of disciplines by exploiting this versatile new set of control techniques.
