**Graciela Arroyo Pichardo**

**Competencias para la ciudadanía** María Dolores Morillas Gómez, 2006-11-24 CIVIC COMPETENCIES - Reflection, decision, action - What education do we want for this moment and for the future for citizens? The building of a viable future in which democracy, equity, social justice, peace and harmony with our natural environment, and the ethic of responsible citizenship are shared values, passes today as education for citizenship, a project that has as a horizon, the formation of responsible and free persons to engage in democratic processes with a new ecological, peaceful reasoning, inclined to solidarity, called to construct the value of the different and to be sensitive to any human relation. From the formal educational angle, this book responds to the urgent need to create projects generative of a new culture that gives alternative responses to the needs and challenges of our globalized world, that permits the integral development of persons, that considers social diversity as a riches and not as conflict, loss of identity or a motive for exclusion, and that sustainably cares for life and resources of the planet.

**Ética ecológica** Jorge Riechmann, 2004 Desde los conflictos sobre la desigual distribución de bienes y males ecológicos (que se plantean a menudo en términos de justicia ambiental) hasta los debates sobre el trato ético a los animales no humanos, desde la estética ambiental hasta el ecofeminismo, desde las cuestiones metaéticas a las propuestas normativas, las diversas contribuciones de este libro interrogan nuestra problemática relación con la naturaleza, ofrecen elementos de análisis desde la perspectiva de la filosofía moral, y aventuran propuestas que resultarán de interés tanto para el estudioso serio como para el activista comprometido.

**Problemática ambiental** Jorge Julián Vélez Upegui, 2016-06-01 Los problemas ambientales involucran complejos y diversos factores, de modo que su estudio y tratamiento debe ser transdisciplinar, con el interés primordial de comprenderlos desde un plano biofísico, económico y social. Este libro presenta de forma clara e instructiva los conceptos fundamentales ambientales, físicos, químicos, económicos y matemáticos implicados en la problemática ambiental.
