More Secondary Starters and Plenaries Mike Gershon, 2013-04-14 All New Classroom Starters and Plenaries provides busy teachers with a set of flexible, easy-to-implement activity ideas that can be used in any subject. The 50 starters and 50 plenaries have been crafted to fit with the structure of teaching, rather than specific content, so you can dip into the book when you are in search of a new idea for engaging your class and adapt the activity to suit your own needs. The activities have been organised into useful divisions, such as Assessment for Learning, Concepts, and Learning Objectives, and each includes a brief rationale for the activity. Many of the activities offer several examples of how it could be used, and there are online resources too, giving you everything you need not just in planning your starters and plenaries, but also in delivering them to your class.

Daily Routines to Jump-Start Geometry, Measurement, and Data, Grades K-5 John J. SanGiovanni, Dennis McDonald, 2025-06-03 Geometry, measurement, and data aren't just math topics—they're fundamental skills for understanding the world around us. Geometry, measurement, and data concepts play a major role in everyday life. Yet, when it comes to teaching math in the elementary grades, these concepts can be overshadowed by other content, like number concepts, computation, or fractions. Instead, what if these ideas about measurement, geometry, and data were connected to number and computation? What if they were featured content for bursts of engagement, reasoning, and discussion? The bite-sized routines in this guide are just that! The routines in this book are perfect for teachers looking for interesting and doable daily practice that engage students in geometry, measurement, and data to foster reasoning, critical thinking, and sense-making. *Daily Routines to Jump-Start Geometry, Measurement, and Data, Grades K-5* provides routines that are practical, easy-to-implement, and meant for quick engagements to ignite thinking and reasoning skills while being adaptable to various content. Fortified with standards for math practices and processes, this book provides a collection of 20 routines with extensions and modifications for measurement, data, and geometry. Includes a detailed example for each routine on why it matters, the challenges it addresses, and how to facilitate it in the classroom. Offers guidance for selecting and introducing routines as well as how to design your own routines. Helps you integrate the geometry, measurement, and data concepts earlier in the school year and can complement any curriculum or textbook program. Features bonus activities that infuse money and time! Extends learning through a companion website that includes each routine as a downloadable and an editable set of PowerPoint slides that provides templates for making your own examples. By implementing these daily routines, you can not only enhance your student's understanding and engagement in geometry, measurement, and data but

also foster a deeper connection between math and the real world.

Story Starters and Science Notebooking Sandy Buczynski,Kristin Fontichiaro,2009-05-19 Story Starters and Science Notebooking: Developing Student Thinking Through Literacy and Inquiry is designed to provide a meaningful, comfortable framework in which teachers and parents can encourage elementary children to explore scientific ideas in an inquiry-oriented format. The basis for each scientific concept presented in Story Starters and Science Notebooking is embedded in a story appropriate for elementary-aged children. The activity that follows each narrative encourages learners to observe, compare, gather data, organize or classify, and draw conclusions about the problem posed from the story. Because current scientific knowledge and understanding guide scientific investigations, background information in each chapter provides teachers with a synopsis of the scientific concept involved in the activity for that story. The story starters present a framework for inquiry, which eliminates the free-wheeling, uncontrolled, and unstructured view some teachers have of inquiry. These are either original stories or familiar children's stories that ask learners to investigate a possible scientific explanation for a problem or scenario. Learners then communicate their findings in an oral, written, pictorial, or technological form back to a lead character from the story. Extension activities provide an opportunity for learners to compare their answers with what scientists already know about the world and also motivate them to frame new questions. Grades 3-6
