Biochemistry of Foods N.A. Michael Eskin, Fereidoon Shahidi, 2012-10-08 This bestselling reference bridges the gap between the introductory and highly specialized books dealing with aspects of food biochemistry for undergraduate and graduate students, researchers, and professionals in the fields of food science, horticulture, animal science, dairy science and cereal chemistry. Now fully revised and updated, with contributing authors from around the world, the third edition of *Biochemistry of Foods* once again presents the most current science available. The first section addresses the biochemical changes involved in the development of raw foods such as cereals, legumes, fruits and vegetables, milk, and eggs. Section II reviews the processing of foods such as brewing, cheese and yogurt, oilseed processing as well as the role of non-enzymatic browning. Section III on spoilage includes a comprehensive review of enzymatic browning, lipid oxidation and milk off-flavors. The final section covers the new and rapidly expanding area of rDNA technologies. This book provides transitional coverage that moves the reader from concept to application. - Features new chapters on rDNA technologies, legumes, eggs, oilseed processing and fat modification, and lipid oxidation - Offers expanded and updated material throughout, including valuable illustrations - Edited and authored by award-winning scientists

Applied Food Protein Chemistry Zeynep Ustunol, 2014-12-19 Food proteins are of great interest, not only because of their nutritional importance and their functionality in foods, but also for their detrimental effects. Although proteins from milk, meats (including fish and poultry), eggs, cereals, legumes, and oilseeds have been the traditional sources of protein in the human diet, potentially any proteins from a biological source could serve as a food protein. The primary role of protein in the diet is to provide the building materials for the synthesis of muscle and other tissues, and they play a critical role in many biological processes. They are also responsible for food texture, color, and flavor. Today, food proteins are extracted, modified, and incorporated into processed foods to impart specific functional properties. They can also have adverse effects in the diet: proteins, such as walnuts, pecans, almonds, and cashews, soybean, wheat, milk, egg, crustacean, and fish proteins can be powerful allergens for some people. *Applied Food Protein Chemistry* is an applied reference which reviews the properties of food proteins and provides in-depth information on important plant and animal proteins consumed around the world. The book is grouped into three sections: (1) overview of food proteins, (2) plant proteins, and (3) animal proteins. Each chapter discusses world production, distribution, utilization, physicochemical properties, and the functional properties

of each protein, as well as its food applications. The authors for each of the chapters are carefully selected experts in the field. This book will be a valuable reference tool for those who work on food proteins. It will also be an important text on applied food protein chemistry for upper-level students and graduate students of food science programs.

Hen Eggs Takehiko Yamamoto, Lekh Raj Juneja, Hajime Hatta, Mujo Kim, 1996-12-13 The egg is a chemical storehouse—within an incubating egg a complicated set of chemical reactions take place that convert the chemicals into a living animal. Using hen eggs as a model, this new text explores the use of eggs for food, industrial, and pharmaceutical applications. It covers the chemistry, biology, and function of lipids; carbohydrates; proteins; yolk antibody (IgY); and other materials of eggs. The novel merits of egg materials over others used in the same products are also discussed. These areas of egg technology have never been compiled before in one source.

Proceedings of the 5th International Conference on Transportation Geotechnics (ICTG) 2024, Volume 7 Cholachat Rujikiatkamjorn, Jianfeng Xue, Buddhima Indraratna, 2024-10-22 This book presents select proceedings of the 5th International Conference on Transportation Geotechnics (ICTG 2024). It includes papers on ground improvement methodologies, dynamics of transportation infrastructure, and geotechnical intricacies of mega projects. It covers topics such as underground transportation systems and heights of airfields and pavements. This book discusses diverse thematic landscapes, offering profound explorations into sensor technologies, data analytics, and machine learning applications. The publication highlights advanced practices, latest developments, and efforts to foster collaboration, innovation, and sustainable solutions for transportation infrastructure worldwide. The book can be a valuable reference for researchers and professionals interested in transportation geotechnics.

Times of Polymers (TOP) and Composites Domenico Acierno, Alberto D'Amore, Luigi Grassia, 2008-09-05 The International Conference on "Times of Polymers (TOP) and Composites" was held in September, 2008 (Ischia-Italy). This was the fourth of a series of biennial work shops on "polymers timescales" resulting from a joint initiative of the Second University of Naples-SUN and the University of Naples Federico II. Scientists from chemistry to physics to engineering areas formed a homogeneous community as the contributions, even if spanning very different topics, subtend the concept of timescale of polymer based materials. In all, about 150 papers were submitted by scientists from all over the world. The conference is organised in oral sessions subdivided into three main general topics, namely: Timescales of Polymers (TP), Composites and Nano-Composites, Polymer Chemistry and Physics which included the following sub-topics: Viscoelasticity, Glassy State, Thin Films, Blends, Organic Electronics: OLED, OTFT, Polymer-based Sensors, Industrial Rheology, Durability/Degradation, Polymer Processing, Tissue Engineering, Foams, Biomaterials, Cultural Heritage, Fracture and Yielding, Properties Modelling. This book is organized in a way that the sequence of papers complies with the structure of the conference with many papers selected from the general poster session. The first part of the book spanned over the timescales of polymers in absence of chemistry-driven phenomena. The time dependent behaviour of several classes of polymers was tackled from different perspectives, from soft matter physics to structural design approach. The second section was mainly devoted to the different aspects that influence the response properties of Nanocomposites as well as structural composites. Many papers focused on the promising perspectives of carbon nanotubes, organically modified clays and metallic nanoparticles based polymers. Theoretical as well as experimental approaches were extensively addressed. The third section was devoted to the chemistry-induced physical changes in polymers. From optical properties to biocompatibility a wide range of systems was presented. The book is co-edited by Alberto D'Amore and Domenico Acierno, the co-chairmen of the conference, that pre-screened the submitted papers for topical applicability and by Luigi Grassia that, with his invaluable

support, rendered realistic carrying out the book within a very “narrow timescale”.
