Implications of the Energy Efficiency Design Index (EEDI) for the International Shipping Industry Rolando Díaz Pérez, Gerd Schwandner, 2012

**Energy Efficiency in Shipping for Environmental Sustainability** Ashok Menon, 2024-10-29 This book examines the environmental impact of emissions from ships, setting out the mandatory regulations of MARPOL 73/78 and the Shipboard Energy Efficiency Management Plan, as well as new International Maritime Organization regulations such as MEPC 80. Chapters provide an in-depth understanding of how ship staff can increase energy efficiency by reducing fuel consumption and using innovative technologies. Comprehensive coverage of energy audit methodology is offered to ensure compliance with energy efficiency requirements. Written accessibly to suit a wide range of readers in the shipping industry, the book will be especially valuable for ship officers as well as trainees and cadets.

Ports and the Environment Meifeng Luo, Tsz Leung Yip, 2017-10-02 Ports are a vital part of the global economy, connecting the world through maritime transport networks, promoting international trade, and supporting global economic growth. However, port communities are increasingly concerned about the local environmental problems associated with air pollution from increased port activities. Efforts are increasingly being made into the reduction of human-induced changes to the global environment, and one of the target areas is to reduce air emissions from international shipping. It appears that management of the port sector has entered into a new era, not only because environmental concerns are increasingly being expressed surrounding the ports themselves, but also because many of the new environmental measures associated with the shipping trade have to be enforced when ships are in port. Ports and the Environment assembles research focusing on the management of ports, and the environmental issues associated with both the shipping trade and the ports themselves. By examining contemporary concerns from the perspectives of maritime policy, port management, and industrial efficiency, this book will provide important reference for future research and policy-making in this area. This book was originally published as a special issue of Maritime Policy & Management.

**Sustainable Shipping** Harilaos N. Psaraftis, 2019-02-11 International shipping is currently at a crossroads. The decision of the International Maritime Organization (IMO) in April 2018 to adopt an Initial Strategy so as to achieve by 2050 a reduction of at least 50% in maritime greenhouse gas (GHG) emissions vis-à-vis 2008 levels epitomizes the last among a

series of recent developments as regards sustainable shipping. It also sets the scene on what may happen in the future. Even though many experts and industry circles believe that the IMO decision is in line with the COP21 climate change agreement in Paris in 2015, others disagree, either on the ground that the target is not ambitious enough, or on the ground that no clear pathway to reach the target is currently visible. This book takes a cross-disciplinary view of the various dimensions of the maritime transportation sustainability problem. “Cross-disciplinary” means that a variety of angles are used to examine the book topics, and these mainly include the technological angle, the economics angle, the logistics angle, and the environmental angle. The book reviews models that can be used to evaluate decisions, policy alternatives and trade-offs. For sustainable shipping, a spectrum of technical, logistics-based and market based measures are being contemplated. All may have important side-effects as regards the economics and logistics of the maritime supply chain, including ports and hinterland connections. The objective to attain an acceptable environmental performance, while at the same time respecting traditional economic performance criteria so that shipping remains viable, is and is likely to be a central goal for both industry and policy-makers in the years ahead. At the same time, policy fragmentation is likely to create distortions of competition and sub-optimal solutions. This book attempts to address these issues and identify better solutions. *Sustainable Shipping: A Cross-Disciplinary View* includes chapters that cover many relevant topics. These include a general view of maritime transport sustainability, green ship technologies, information and communication technologies (ICTs) for sustainable shipping, green tramp ship routing and scheduling, green liner network design and speed optimization. Market based measures, oil pollution, ship recycling, sulphur emissions, ballast water management, alternative fuels and green ports are also covered. The book concludes by discussing prospects for the future, with a focus on the IMO Initial Strategy. This book contains a unique wealth of information on sustainable shipping. The knowledge it provides is rigorous, complete, and well supported by statistics, technical reports, and scientific references. The treatment of the various topics is not only informative but also analytical and critical. —Gilbert Laporte, *Maritime Economics & Logistics* (12 May, 2020)

*Encyclopedia of Ocean Engineering* Weicheng Cui, Shixiao Fu, Zhiqiang Hu, 2022-06-29 This encyclopedia adopts a wider definition for the concept of ocean engineering. Specifically, it includes (1) offshore engineering: fixed and floating offshore oil and gas platforms; pipelines and risers; cables and moorings; buoy technology; foundation engineering; ocean mining; marine and offshore renewable energy; aquaculture engineering; and subsea engineering; (2) naval architecture: ship and special marine vehicle design; intact and damaged stability; technology for energy efficiency and green shipping; ship production technology; decommissioning and recycling; (3) polar and Arctic Engineering: ice mechanics; ice-structure interaction; polar operations; polar design; environmental protection; (4) underwater technologies: AUV/ROV design; AUV/ROV hydrodynamics; maneuvering and control; and underwater-specific communicating and sensing systems for AUV/ROVs. It summarizes the A-Z of the background and application knowledge of ocean engineering for use by ocean

scientists and ocean engineers as well as nonspecialists such as engineers and scientists from all disciplines, economists, students, and politicians. Ocean engineering theories, ocean devices and equipment, ocean design and operation technologies are described by international experts, many from industry and each entry offers an introduction and references for further study, making current technology and operating practices available for future generations to learn from. The book also furthers our understanding of the current state of the art, leading to new and more efficient technologies with breakthroughs from new theory and materials. As the land resources approach the exploitation limit, ocean resources are becoming the next choice for the sustainable development. As such, ocean engineering is vital in the 21st century.

**Regime Interaction and Climate Change** Beatriz Martinez Romera, 2017-12-06 The regulation of greenhouse gas emissions from international aviation and maritime transport has proved to be a difficult task for international climate negotiations such as the Paris Agreement in 2015. Almost two decades prior, Article 2.2 of the Kyoto Protocol excluded emissions from international aviation and maritime transport from its targets, delegating the negotiation of sector-specific regulations to the International Civil Aviation Organization (ICAO) and the International Maritime Organization (IMO), respectively. However, progress at these venues has also been limited. *Regime Interaction and Climate Change* maps out the legal frameworks in the Climate, ICAO and IMO regimes, and explores the law-making process for the regulation of international aviation and maritime transport through the lenses of fragmentation of international law and regime interaction. The book sheds light on how interaction between these three regimes occurs, what the consequences of such interaction are and how they can be managed to resolve conflicts and promote synergies. This book will be of great interest to scholars of international environmental law and governance, climate change policy and climate change law.

*International Encyclopedia of Transportation*, 2021-05-13 In an increasingly globalised world, despite reductions in costs and time, transportation has become even more important as a facilitator of economic and human interaction; this is reflected in technical advances in transportation systems, increasing interest in how transportation interacts with society and the need to provide novel approaches to understanding its impacts. This has become particularly acute with the impact that Covid-19 has had on transportation across the world, at local, national and international levels. *Encyclopedia of Transportation, Seven Volume Set* - containing almost 600 articles - brings a cross-cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering, operations research, economics, geography and sociology in order to understand the changes taking place. Emphasising the interaction between these different aspects of research, it offers new solutions to modern-day problems related to transportation. Each of its nine sections is based around familiar themes, but brings together the views of experts from different disciplinary perspectives. Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines, different parts of the world and different social perspectives. The nine sections are structured around the

following themes: Transport Modes; Freight Transport and Logistics; Transport Safety and Security; Transport Economics; Traffic Management; Transport Modelling and Data Management; Transport Policy and Planning; Transport Psychology; Sustainability and Health Issues in Transportation. Some articles provide a technical introduction to a topic whilst others provide a bridge between topics or a more future-oriented view of new research areas or challenges. The end result is a reference work that offers researchers and practitioners new approaches, new ways of thinking and novel solutions to problems. All-encompassing and expertly authored, this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world. Provides a forward looking and integrated approach to transportation Updated with future technological impacts, such as self-driving vehicles, cyber-physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach, including sets of comparative studies and applications

**Decarbonisation of Shipping**, 2022 This report examines the implementation of the EEDI framework and its effect on ship design and energy efficiency in general. It shows that EEDI, together with market conditions has resulted in substantial improvements in energy efficiency of ships. This has been achieved mainly with more efficient engines, hydrodynamic optimisation and significant uptake of energy saving devices, but uptake of other types of innovative technology has been limited for a number of reasons. Increasing uptake of energy saving devices and innovative technology is not necessarily

possible or desirable because different ship types and operating profiles affect the energy saving potential of these devices and technology. EEDI broadly needs to integrate with the CII measure and any upcoming MBM and the role and form of EEDI also needs to be adapted through a period where fuel type and ship design are in transition. As such the timing and reduction rate of Phase 4 should take into account the effect of these other measures. Some minor adjustments and changes are investigated and proposed, however larger scale changes require redrawing of the baselines.

**MARPOL Consolidated Edition 2011** International Maritime Organization, 2011 The International Convention for the Prevention of Pollution from Ships, 1973 (MARPOL Convention), is concerned with preserving the marine environment through the prevention of pollution by oil and other harmful substances and the minimization of accidental discharge of such substances. Its technical content is laid out in six Annexes, the first five of which were in the 1973 Convention, as modified by the 1978 Protocol, and cover pollution of the sea by oil, by noxious liquid substances in bulk, by harmful substances in packaged form, by sewage from ships and by garbage from ships. Annex VI was adopted by the 1997 Protocol and covers air pollution from ships

**World Energy Outlook 2012** International Energy Agency,2012 Industry and government decision-makers and others with a stake in the energy sector all need WEO-2012. It presents authoritative projections of energy trends through to 2035 and insights into what they mean for energy security, environmental sustainability and economic development. Oil, coal, natural gas, renewables and nuclear power are all covered, together with an update on climate change issues. Global energy demand, production, trade, investment and carbon dioxide emissions are broken down by region or country, by fuel and by sector. Special strategic analyses cover: What unlocking the purely economic potential for energy efficiency could do, country by country and sector by sector, for oil markets, the climate and the economy. The Iraqi energy sector, examining both its importance in satisfying the country's own needs and its crucial role in meeting global oil and gas demand. The water-energy nexus, as water resources become increasingly stressed and access more contentious. Measures of progress towards providing universal access to modern energy services. There are many uncertainties; but many decisions cannot wait. The insights of WEO-2012 are invaluable to those who must shape our energy future.
