Learning Styles Questionnaire Peter Honey,Alan Mumford,2000

Assessing the Value of Self Development from the Viewpoint of the Manager and the Organisation Helen Metz,2009-07 Essay from the year 2007 in the subject Business economics - Business Management, Corporate Governance, grade: A, University of Westminster, language: English, abstract: The key element of self development is that individuals take responsibility of their own learning. The learner identifies learning needs, determines the learning goal, selects the method on how to achieve it and initiates it. The role of the development specialist becomes that of a facilitator, counsellor or supporter rather than the provider or initiator of development opportunities (Pedler, 1988; Pedler et al., 2007). Self development takes into consideration that approximately 80 per cent of learning is through experience and integrates learning in the context where it happens. Self development is not only about enhancing professional skills and performance; it is also about personal growth (Boydell and Pedler, 1981; Megginson and Pedler, 1992). For self development to be beneficial to the individual as well as the organisation, supplementary activities, such as development centres, personal

development plans or competency dictionaries can offer guidelines to the individual (Antonacopoulou, 2000). Self development should not be regarded as separate to organisational development, but rather as an integral component (Smith, 1990). Self development ought to be [...] a developmental strategy which is beneficial both to the individual and the organisation. [...] many of the perceived benefits from self-development are highlighting the integration of individual development and organisational development. (Antonacopoulou, 2000:492) In the following the benefits of self development for the manager and the organisation are analysed separately and ultimately summarised in the conclusion.

Dyslexia and Learning Style Tilly Mortimore, 2008-07-08 The second edition of this highly successful book, *Dyslexia and Learning Style* builds on the latest research to extend its practical, evidence-based approach to learning style in the educational environment. Containing a response to the most recent critical insights into style theory and new suggestions for practical work for students within a range of educational contexts, this book remains essential for any teacher wishing to use awareness of style preferences to ensure that all students are helped to succeed. Recent government policy emphasises inclusive teaching for all and personalised learning. This means that all teachers need to consider how they can adapt the ways in which they teach to maximise success for all learners. The first section of this practical book provides an overview of the latest research into both dyslexia and learning style and how pupils should be helped to consider the ways in which they can take responsibility to make use of their style preferences to learn effectively. The second section provides ways in which style preferences can be established. It offers techniques to help students absorb, process and create responses to information across the curriculum. It suggests practical ways in which teachers can adapt material to make it accessible to a range of learners and provides activities to help students develop a more flexible approach to learning throughout their studies in school and higher education.
