The Reinvention of the U.S. Academic Library Donald A. Barclay, 2025-07-10 Focusing on U.S. academic libraries, Rewiring the Academic Library begins by providing a concise history of the traditional role and function of academic libraries from their earliest times up to the dawn of Digital Age and the spread of digital technology into all aspects of academic research and scholarly communication.

Theoretical Approaches to Disharmonic Word Order Theresa Biberauer, Michelle Sheehan, 2013-12-05 This book considers the implications of cross-linguistic word-order patterns for linguistic theory. One of the salient results of Joseph Greenberg's pioneering work in language typology was the notion of a 'harmonic' word-order type, whereby if the verb appears at the left or right edge of the verb phrase, other heads (e.g. prepositions, nouns) also tend to do so. Today, however, there is recognition in both the typological and generative literature that very many, and possibly even the majority of languages, fail to be fully harmonic in the sense that all head-complement pairs pattern alike. But does this imply limitless variation? The chapters in this volume, written by international scholars, discuss the issues arising from this basic question, drawing on data from typologically distinct disharmonic languages, including Mandarin Chinese, Basque, Mócheno (a Tyrolean variety spoken in Northern Italy), French, English, Hixkaryana (a Cariban language), Khalkha Mongolian, Uyghur Turkic, and Afrikaans. The volume begins with a substantial introduction to the study of word order and its relation to linguistic theory. It is then divided into sections on the nature of disharmony; the role of prosody; the question of Antisymmetry and novel alternatives to Antisymmetry; and the Final-over-Final Constraint. Aside from introducing new empirical findings, the volume also offers a range of new perspectives on disharmonic word orders, the status of word order in linguistic theory, and theoretical accounts of typological gaps.

A Grammar of Xong Adam Sposato, 2021-01-18 Despite the fact that Miao-Yao (or Hmong-Mien) is one of the major language families of East and Southeast Asia, this work is only the second full-length descriptive grammar of any Miao-Yao language published in English. It focuses on Xong, a language belonging to the Miao branch of the family. Xong has approximately 900,000 speakers, the vast majority lives in Hunan and Guizhou Provinces in South-Central China. In particular, this description concentrates on several fully mutually intelligible Xong varieties spoken in Fenghuang County, located in the Hunan Province. In producing this work, the author primarily relies on the fieldwork data he collected over a

period of ten months in Fenghuang County. He also made use of many of the previously published Chinese-language descriptions of Xong. The results are of use to scholars with an interest in the Miao-Yao family in particular or in the languages of East and Southeast Asia more in general.

Austronesian Undressed David Gil, Antoinette Schapper, 2020-10-15 Many Austronesian languages exhibit isolating word structure. This volume offers a series of investigations into these languages, which are found in an isolating crescent extending from Mainland Southeast Asia through the Indonesian archipelago and into western New Guinea. Some of the languages examined in this volume include Cham, Minangkabau, colloquial Malay/Indonesian and Javanese, Lio, Alorese, and Tetun Dili. The main purpose of this volume is to address the general question of how and why languages become isolating, by examination of a number of competing hypotheses. While some view morphological loss as a natural process, others argue that the development of isolating word structure is typically driven by language contact through various mechanisms such as creolization, metatypy, and Sprachbund effects. This volume should be of interest not only to Austronesianists and historians of Insular Southeast Asia, but also to grammarians, typologists, historical linguists, creolists, and specialists in language contact.

Linguistic Fundamentals for Natural Language Processing Emily M. Bender, 2022-05-31 Many NLP tasks have at their core a subtask of extracting the dependencies—who did what to whom—from natural language sentences. This task can be understood as the inverse of the problem solved in different ways by diverse human languages, namely, how to indicate the relationship between different parts of a sentence. Understanding how languages solve the problem can be extremely useful in both feature design and error analysis in the application of machine learning to NLP. Likewise, understanding cross-linguistic variation can be important for the design of MT systems and other multilingual applications. The purpose of this book is to present in a succinct and accessible fashion information about the morphological and syntactic structure of human languages that can be useful in creating more linguistically sophisticated, more language-independent, and thus more successful NLP systems. Table of Contents: Acknowledgments / Introduction/motivation / Morphology: Introduction / Morphophonology / Morphosyntax / Syntax: Introduction / Parts of speech / Heads, arguments, and adjuncts / Argument types and grammatical functions / Mismatches between syntactic position and semantic roles / Resources / Bibliography / Author's Biography / General Index / Index of Languages
