Florian Körner

The Wisdom of Strategic Learning Ian Cunningham, 2017-07-05 The Wisdom of Strategic Learning has enabled many organizations to develop a strategic approach to learning and development. Its premise that learning must be integrated with the strategic direction of the organization has been validated by numerous successful businesses which have implemented its tried and tested approaches. This second edition of Ian Cunningham's book updates and expands material on the importance of the self managed learning approach to create focused, active and committed employees. A new chapter on the role and development of staff in SML programmes has been added, along with new appendices, for example on selling the approach. With new case material including the use of online groups on the Internet, this practical, thought-provoking book shows how the ideas behind the learning organization can be applied for strategic advantage.

Strategic Learning and Development Practice Graham Perkins, Sian Robinson, 2025-01-03 Designed to support aspects of the CIPD's advanced diplomas the CIPD Advanced Diploma in Strategic Learning and Development and equip students with the skills needed to embark on a career in L&D. Offering essential coverage of the underpinning theory of learning and development, this book explores key learning models, learning styles and an examination of how people learn. Building on these theoretical foundations, Strategic Learning and Development Practice goes on to explore how this theory applies in practice., including identifying learning needs, learning analytics, knowledge management, technology-supported learning and how to build and evaluate an L&D strategy. This book is full of real-world examples and pedagogical features to support student learning. These include reflective practice questions to consolidate learning and promote critical thought as well as explore further boxes to facilitate wider reading and encourage students to explore areas of interest in more depth. Key definitions in this book give a clear outline of the essential terms and key learning points at the end of every chapter support student revision of the most important themes. Online resources include a lecturer manual and PowerPoint slides for each chapter.

Distributed Strategic Learning for Wireless Engineers Hamidou Tembine, 2012-05-18 Although valued for its ability to

allow teams to collaborate and foster coalitional behaviors among the participants, game theory's application to networking systems is not without challenges. Distributed Strategic Learning for Wireless Engineers illuminates the promise of learning in dynamic games as a tool for analyzing network evolution and underlines the potential pitfalls and difficulties likely to be encountered. Establishing the link between several theories, this book demonstrates what is needed to learn strategic interaction in wireless networks under uncertainty, randomness, and time delays. It addresses questions such as: How much information is enough for effective distributed decision making? Is having more information always useful in terms of system performance? What are the individual learning performance bounds under outdated and imperfect measurement? What are the possible dynamics and outcomes if the players adopt different learning patterns? If convergence occurs, what is the convergence time of heterogeneous learning? What are the issues of hybrid learning? How can one develop fast and efficient learning schemes in scenarios where some players have more information than the others? What is the impact of risk-sensitivity in strategic learning systems? How can one construct learning schemes in a dynamic environment in which one of the players do not observe a numerical value of its own-payoffs but only a signal of it? How can one learn unstable equilibria and global optima in a fully distributed manner? The book provides an explicit description of how players attempt to learn over time about the game and about the behavior of others. It focuses on finite and infinite systems, where the interplay among the individual adjustments undertaken by the different players generates different learning dynamics, heterogeneous learning, risk-sensitive learning, and hybrid dynamics.

Conceptualizing Processes of Strategic Change. The Contribution of an Attention-Based View to Strategy Formulation
Florian Körner, 2015-07-06 Master's Thesis from the year 2015 in the subject Business economics - Business Management, Corporate Governance, grade: 1,7, University of Hannover (Personal und Arbeit), course: International Management, language: English, abstract: How and why do organizations change? These questions have been an enduring and central quest of management scholars and many other disciplines. To find answers concerning these questions, it is indisputable that executives need to develop strategies in order to reach their goals and successfully respond and adapt to the environment while facing 'change'. Or as Ocasio (1997) put it, "explaining how firms behave is one of the fundamental issues or questions that define the field of strategy (...) and the contribution it makes to the theory and practice of management." When companies are faced with environmental or internal changes, some organizations start changing their strategies and others do not. Accordingly, in this paper we will view strategic change as the firm's alignment with its external environment and with internal organizational issues. Hence, the starting point for why organizations take action concerns the environment within which the company operates. Over the past decades, managers and scholars assumed that the environment needed to be assessed, observed and enacted in order to gain information, process this information and to formulate a strategy to reach future goals and push the firm's overall performance. The most popular assumptions within the strategy formulation

literature are that “the appropriateness of a firm’s strategy can be defined in terms of its fit, match, or congruence with the environmental or organizational contingencies facing the firm.” Thus, the environment inhibits global competitive pressure, dynamics and uncertainty because of the current ongoing internationalization of firms and their willingness and need to expand and invest in emergent markets in order to survive and gain profits. The ongoing revolution and upcoming research stream called Industry 4.0, which is highlighting the importance for and the influence of the internet (e.g. the Internet of Things) on firms, is just one of the examples that shows how firms have to cope with and adapt to the complex environments. Since, for example, the internet improves the information gathering process concerning environmental and internal organizational issues, the actual scarce resource within the firm becomes the managers’ amount of attention that they allocate to “searching for, sorting through, and interpreting the available information.” [...]

Essays in Strategic Learning Fabiano Schivardi, 1998

Metacognition in Mathematics Education Annemie Desoete, Marcel Veenman, 2006 For some decades, theoretical and empirical research has focused on the phenomenon of metacognition and its overwhelming importance to human learning and performance. The real growth in theoretical and empirical studies about metacognition started with the work of Flavell at the end of the 1970s in the context of research on metamemory. The metacognitive concept has been very successful stimulating a lot of studies. The metacognitive research on reading peaked in the 1980s and has levelled since. Metacognition has more recently also been applied to mathematics. Metacognition can be differentiated into two central components, namely metacognitive knowledge and metacognitive processes or skills. In the same vein, Brown (1978) distinguished metacognitive knowledge about the interaction between person, task, and strategies characteristics from the regulation of one's own cognitive activities. The purpose of this book is to help to summarise and clarify some of the issues on the conceptualisation, the assessment and the training of metacognition on mathematical issues in learners with and without mathematics learning disabilities. metacognition in mathematics performance.

Language Learners of Tomorrow Margaret Ann Kassen, 1999

Strategic Learning and Knowledge Management Ron Sanchez, Aimé Heene, 1997-02-12 Accordingly, this volume also examines processes within firms that improve both the creation and application of new knowledge in competitive and cooperative interactions between organizations. Strategic Learning and Knowledge Management challenges many notions prevalent in current discussions of knowledge and learning, such as the strategic value of 'tacit knowledge' and the need to rely primarily on internal learning processes. Using case studies from American and European companies, the contributors bring you up to date with current thinking about managing strategically important knowledge in organizations.

International Encyclopedia of Developmental and Instructional Psychology Erik de Corte, Franz E. Weinert, 1996

This Encyclopedia intends to provide a research-based overview in an educational perspective of the present state-of-the-art of our knowledge and understanding of the conditions, processes, and modifiabilities of human development and learning. The Encyclopedia focuses on both developmental psychology and instructional psychology. Over the past decade the boundaries between these two separate research domains have become increasingly obscure. Indeed, developmental psychologists have shown a growing interest in the impact of environmental factors on development, this has led to the study of educational and instructional variables, the pre-dominantly environmental factors. Meanwhile, instructional psychology has become a major subdomain of research on human cognition and development. A substantial contribution to the synergy between both domains derives from the robust research finding that developmental changes are very important conditions, as well as consequences, of the acquisition of knowledge and (meta)cognitive strategies. The resulting changes have inspired the decision to combine both developmental and instructional psychology into one single volume. The trend toward the integration of both domains notwithstanding, the systematic discussion of their research findings requires a certain delimitation of the two fields. The Encyclopedia is divided into 16 areas in order to reflect the specific nature, as well as the integration, of both domains. In the first section, which is most representative of the integrative tendency, a general framework of research on human development, learning and instruction is outlined. The next six chapters are concerned with the various aspects of human development and learning. The remaining nine sections represent an overview of the research findings on learning and instruction which are relevant to education. Articles include updated and revised material from the International Encyclopedia of Education, 2nd Edition (described by Choice as being a premier resource when judged on virtually every criteria applied to a reference work). The Encyclopedia provides an informative introduction to aspects of developmental psychology and instructional psychology that significantly influence education.

Computers for Artificial Intelligence Processing Benjamin W. Wah, C. V. Ramamoorthy, 1990-10-12 The present book

supports the increasing complexity and the growing need for computational power of artificial intelligence (AI) by providing comprehensive treatments of new hardware and software engineering met in AI language design and applications. The book is a collection of 16 substantial papers (chapters), the contributors being 51 well-known researchers in the AI fields. The papers are grouped into the following five sections: Section 1 represents a well documented survey on symbolic processing computers. Section 2 (Language-based AI Architectures) supports the design and implementation of AI language-oriented computers. Three (2-4) chapters are devoted to (computer architecture concerning) sequential Lisp processing: architectural features of Lisp computers, Symbolics' Lisp computer architecture, memory management and performance evaluation of a Lisp machine system. Other three (5-7) chapters discuss multiprocessing and parallel processing of Lisp (and general functional) programs. The last two chapters of section 2 are presenting architectures supporting object-oriented programming (Smalltalk) and production systems. Section 3 (Multiprocessor AI Architecture) contains two (10-11) chapters, dealing with Connection Machine architecture and its applications, and with the design of data/knowledge base machines for AI processing. Section 4 (Connectionist Architectures and Applications) include two (12-13) chapters, illustrating the connectionist model architecture design and learning. Section 5 (Software Architectures for AI Applications) is made up of three (14-16) chapters, analysing the relationship between AI and software engineering, the development tools for AI programs, and the problem of AI hardware and software reliability. This book addresses a wide range of AI readers, from beginners to professionals. It carries forth doubtless qualities: compact and well-dimensioned chapters, comprehensively written by AI remarkable professionals, covering up-to-date AI topics and trends.

The Japanese Writing System Heath Rose, 2017 This is the first book devoted to exploring issues of learning written Japanese, focusing on the challenges the writing system poses for the second language learner. It weaves together previous research on Japanese second language acquisition and kanji learning with original studies on self-regulation and kanji learning strategies. It provides the most comprehensive overview of the Japanese writing system and kanji learning to date; helps further our understanding of second language writing acquisition and offers new directions for research in the wider fields of language learning strategies, motivation and self-regulation. Each chapter concludes with a brief discussion of the implications of the content of the chapter for the Japanese language learner, instructor and researcher. It will appeal to researchers of the teaching and learning of Japanese as a foreign/second language, the Japanese writing system and second language acquisition, as well as to instructors and learners of Japanese who are struggling with the teaching and learning of kanji.
