Juan Pedro Martín Vide

Rios, Lagos, Lagunas y Marismas ,2003 Guía profusamente ilustrada para descubrir las distintas especies de peces, aves, árboles, plantas e insectos que conforman los ecosistemas relacionados con el medio acuático.

Fundamentos de limnología neotropical Gabriel Roldán Pérez, John Jairo Ramírez Restrepo, 2008

Hidráulica de ríos y procesos morfológicos - 1ra edición Tomás Ochoa Rubio, 2011-01-01 El libro analiza el comportamiento de las corrientes naturales en lo que se refiere al movimiento del agua; los factores influyentes y los patrones de flujo, así como las particularidades del movimiento de los sedimentos. Asimismo, bosqueja un marco de referencia para el estudio de los procesos morfológicos. Ochoa Rubio expone las clasificaciones geomorfológicas más comunes los fundamentos de la teoría sobre la formación de los cauces naturales para luego abordar los fenómenos de la estabilidad de cauces aplicados a puentes y obras similares construidas sobre ríos o en sus orillas. El estudio de las mesoformas y las macroformas como parte importante de los procesos morfológicos que experimentan las corrientes naturales se hace presente en la obra y se complementa con la predicción de los cambios que se pueden presentar en ellas, es decir, las transformaciones que sufren los procesos morfológicos con el tiempo.

Ingeniería de ríos Juan Pedro Martín Vide, 2009-07 Las actuaciones en los ríos suscitan gran expectacion social, debido a sus beneficios (por ejemplo, la lucha contra las inundaciones) y a su impacto ambiental. La ingeniería de ríos es una rama de la hidráulica en rápida evolución, sometida hoy a la doble exigencia de garantizar la protección del hombre frente al río y, al mismo tiempo, promover su valorización como medio natural. Este libro es un ensayo de síntesis y racionalización del conocimiento en ingeniería fluvial, extrayendo material de la teoría y de la experiencia y trasladándolo a la práctica. Mediante ejercicios y problemas se presentan casos reales para estimular el esfuerzo personal del estudiante y la curiosidad del ingeniero. Los temas principales son los encauzamientos fluviales y los aspectos hidráulicos de los puentes, así como la morfología y la hidráulica fluvial. Este libro amplía profundamente el contenido de la obra Ingeniería fluvial, de 1997.

Los Recursos Naturales de la Región de Murcia Miguel A. Esteve Selma, Mercedes Lloréns Pascual del Riquelme, Constantino Martínez Gallur, 2003 El planteamiento de esta obra ha huido expresamente de las clasificaciones tradicionales de recursos naturales, como las ligadas a su renovabilidad o capacidad de un recurso natural para regenerarse o no en un tiempo dado. Estas clasificaciones que caracterizan o individualizan los recursos uno a uno, aunque muy útiles en

muchos aspectos, suelen presentar algunos problemas cuando se profundiza conceptualmente, ya que la mayor parte de los recursos renovables, como todos los biológicos, pueden dejar de serlo por sobreexplotación, a partir de un determinado umbral, o los no renovables, como muchos minerales, pueden mostrar rasgos de renovabilidad inducidos por un reciclaje activo. El libro describe algunos recursos naturales clásicos como el agua, la energía o los minerales que tienen un tratamiento individualizado por distintas razones, pero basa la mayor parte de su contenido en describir sistemas de recursos, como los sistemas agrarios, los forestales o los costeros. El libro se articula en dos partes. En primer lugar se estudian los contextos: naturales (físicos y biológicos), humanos (la población y su hábitat) y económicos (la naturaleza económica de los recursos naturales), que condicionan el tipo, uso y conservación de los recursos en la Región de Murcia. En la segunda parte del libro se realiza un análisis de los recursos naturales, incluyéndose: el agua, como recurso primordial en zonas áridas y semiáridas; otros recursos físicos de carácter estratégico como son los energéticos y mineros, y tres sistemas de recursos naturales, sujetos a aprovechamientos característicos como son los sistemas agrarios, los forestales y el litoral y el medio marino. Para finalizar con un capítulo que introduce en las técnicas actuales de evaluación y seguimiento del Medio Natural mediante Teledetección y Sistemas de Información Geográfica

Conceptos y técnicas en ecología fluvial Arturo Elosegui, 2009 Resumen: manual para iniciarse o profundizar en ecología de ríos; presenta los conceptos más importantes de ecología fluvial, y los complementa con descripciones detalladas de las principales técnicas que se utilizan en esta disciplina.
