

Alcohol Can Be A Gas

Eugene Franz Roeber, Howard Coon Parmelee

David Blume's Alcohol Can be a Gas! David Blume, 2007 Six volumes bound under one cover make this the most comprehensive book ever written on alcohol fuel production, use, policy, history, ecology, politics and economic perspectives. Thoroughly addresses both past and present controversies, myths and misconceptions that permeate the public debate. It contains the most exhaustive treatment of potential energy crops to be found anywhere. Crops for all climates and soil types are detailed including cellulosic materials. Unique feedstocks that can have global impact like ocean kelp, cattails used for treating sewage, and creative waste products are covered. Design and construction of alcohol plants from 2 gallons per hour to 50 gallons per hour including detailed distillery design data is described in laymen's terms for easy construction. Case histories of actual plants are covered in interviews of operations built by the author's students. The book compares qualities of alcohol versus gasoline and diesel. In exceptional detail, conversion of gasoline, diesel, aircraft, motorcycle, two stroke, and utility engines are described. Using alcohol to produce electricity and hot water as well as cooking and cooling are also addressed. Business models for micro and small plants are laid out enabling the reader to design their own business. The author's original concept of Community Supported Energy projects in which communities establish driver owned alcohol stations and then contract with farmers to supply the station are outlined clearly so activists can organize them. Profusely illustrated with 514 charts, photos and drawings. The book is thoroughly documented with 473 endnotes and a 6300 entry index.
