Bringing Fossils to Life Donald R. Prothero, 2013-11-12 The leading textbook in its field, this work applies paleobiological principles to the fossil record while detailing the evolutionary history of major plant and animal phyla. It incorporates current research from biology, ecology, and population genetics. Written for biology and geology undergrads, the text bridges the gap between purely theoretical paleobiology and solely descriptive invertebrate paleobiology books, emphasizing the cataloguing of live organisms over dead objects. This third edition revises art and research throughout, expands the coverage of invertebrates, includes a discussion of new methodologies, and adds a chapter on the origin and early evolution of life.

Origins of the Universe, Life and Species Plammoottil Cherian, 2018-03-22 The relationship between science and theology has been a crisis for humanity since Darwin's publication of *Origin of Species* that affects the very core of scientific and Biblical truths with serious consequences. In this detailed and absorbing book Dr. Cherian provides astounding facts of science that were deciphered in the last 500 years, each of which is recorded in the Biblical Scriptures. Heeding back to the Biblical account of creation, Dr. Cherian takes the readers from the erroneous notion of the origin of the universe without a cause and abiogenesis as the source of life to the latest scientific discoveries that corroborate the Biblical evidence for divine creation of the universe, life and species that dispel Darwinian evolution. *The Origins of the Universe, Life and Species* sheds much light for a better understanding of the Scriptures that were hidden to many scientists, researchers and students to relate the scientific discoveries that reveal the Biblical truths for a better appreciation of the unknown God who reveals himself through the many scientists and their discoveries. Dr. Cherian, uses all branches of science from astronomy to zoology connecting the dots between science and theology that stretches from the highest of heavens (outer space) to the

deepest of ocean floor revealing the unknown God to be the KNOWN GOD.

Stepping Stones to Christianity Peter S. Williams, 2025-10-17 *Stepping Stones to Christianity* introduces a rational case for Christianity in three steps, starting with scientific arguments for design in cosmology and biology, moving on to philosophical arguments for the existence of God, and closing with an overview of the evidence for a Christian understanding of the historical Jesus, in the context of competing contemporary worldviews. By bringing together revised and expanded versions of materials written to introduce three of the author's "Essays on . . ." books with Wipf & Stock, *Stepping Stones to Christianity* equips readers to consider the case for design in nature, to investigate philosophical arguments for God, and to wrestle with the identity of Jesus.

Shared Governance for Sustainable Working Landscapes Timothy M. Gieseke, 2016-08-05 Sustaining our agricultural landscapes is no longer just a technical, scientific or even political problem, but it has evolved into a socially complex, so-called wicked problem of conflicting social governance and economics. This creates an extreme economic obstacle where the value of ecosystem services remains low and diffuse and the transactions costs remain high and multiple. Using Uber-like business platform technology and a shared governance model, a symbiotic demand for environmental benefits is created. Enabling multi-sector transactions for environmental benefits, this platform innovation

would remedy the tragedy of the commons; the economic nemesis to achieving landscape sustainability. In a nutshell, to sustain our agricultural landscapes a transdisciplinary approach supported by a shared governance model housed within a multi-sided platform is needed. This book introduces an assessment framework identifying governance actors, styles and ratios for socio-ecological systems. The assessment uses a new governance compass to identify the types of actors completing which tasks and identifies the styles of governance used to complete the tasks. It is aimed to anyone involved in sustainability science, agricultural policy planning, or integrated landscape design.
