About the Author As founder of the 21 Crows American Folklore Archives, Jannette Quackenbush has become one of the leading researchers of Appalachian and Midwestern hauntings and the study of cryptids and unknown animals in North America. Her investigations include work on creatures such as Bigfoot, the Grassman, Mothman, Bessie of Lake Erie, and the Loveland Frogman, connecting eyewitness reports with folklore and geography. In addition to her writing and archival research, Quackenbush has led public hikes and field explorations focused on ghost and cryptid legends—most notably her Moonville Night Hikes and Hiking Expeditions (Where the Natural World and the Supernatural World Collide®), which guide visitors through real haunted and creature-sighting locations. Through these programs, she shares historical context, eyewitness accounts, and folkloric origins while encouraging participants to explore Ohio's haunted landscapes and Appalachian backwoods legends for themselves. **Thorp and Covich's Freshwater Invertebrates** James H. Thorp,D. Christopher Rogers,2014-09-06 Readers familiar with the first three editions of Ecology and Classification of North American Freshwater Invertebrates (edited by J.H. Thorp and A.P. Covich) will welcome the comprehensive revision and expansion of that trusted professional reference manual and educational textbook from a single North American tome into a developing multi-volume series covering inland water invertebrates of the world. The series entitled Thorp and Covich's Freshwater Invertebrates (edited by J.H. Thorp) begins with the current Volume I: Ecology and General Biology (edited by J.H. Thorp and D.C. Rogers), which is designed as a companion volume for the remaining books in the series. Those following volumes provide taxonomic coverage for specific zoogeographic regions of the world, starting with Keys to Nearctic Fauna (Vol. II) and Keys to Palearctic Fauna (Vol. III). Volume I maintains the ecological and general biological focus of the previous editions but now expands coverage globally in all chapters, includes more taxonomic groups (e.g., chapters on individual insect orders), and covers additional functional topics such as invasive species, economic impacts, and functional ecology. As in previous editions, the 4th edition of Ecology and Classification of North American Freshwater Invertebrates is designed for use by professionals in universities, government agencies, and private companies as well as by undergraduate and graduate students. - Global coverage of aquatic invertebrate ecology - Discussions on invertebrate ecology, phylogeny, and general biology written by international experts for each group - Separate chapters on invasive species and economic impacts and uses of invertebrates - Eight additional chapters on insect orders and a chapter on freshwater millipedes - Four new chapters on collecting and culturing techniques, ecology of invasive species, economic impacts, and ecological function of invertebrates - Overall expansion of ecology and general biology and a shift of the even more detailed taxonomic keys to other volumes in the projected 9-volume series - Identification keys to lower taxonomic levels

*Studies on the Ecology of Tropical Zooplankton* Henri J. Dumont,J. Green,H. Masundire,2012-12-06 This volume reports on the findings of experts on tropical zooplankton gathered at a meeting in Kariba, Zimbabwe, in 1991. Some basic questions were asked on community composition and biodiversity in the tropics versus the non-tropics. Old ideas on the nature of zooplankton, which were found to be wider than the 'classical' rotifers, cladocerans and copepods, as well as on the number of species in tropical waters, are now beginning to break down accordingly as more and more blank spots in the tropics are explored and as more in-depth studies on the zooplankton of tropical lakes are becoming available. This volume contains a mix of papers discussing the two alternative controls (bottom-up and top-down) of zooplankton community structure and these constitute another step towards a coherent theory of tropical ecosystem theory.
