Special attention is paid to Hadhrami local and transnational politics, social stratification and integration, religio-social reform and journalism, as well as to economic dynamism and the cosmopolitan character of the Hadhrami societies in Southeast Asia.

Youth, Faith, and Artificial Intelligence Zaremohzzabieh, Zeinab,Abdullah, Rusli,Al-Issa, Riyadh Salim,Ahrari, Seyedali,2025-08-29 As AI continues to reshape society, its intersection with the younger generation and faith has presented opportunities and ethical questions. For the youth, navigating their beliefs and identity has become increasingly difficult in this modern world. AI can serve as a tool and a hindrance to spiritual exploration and a challenge to traditional values. Faith communities, in turn, are grappling with how to engage youth meaningfully in an era shaped by algorithms, virtual interactions, and machine learning. *Youth, Faith, and Artificial Intelligence* explores the rapid advancement of AI, and its impact on the way we interact with the youth. This book examines how theological perspectives can help youth navigate the complexities of an AI-driven society. Covering topics such as AI, youth, and engagement, this book is an excellent resource for sociologists, researchers, academicians, educators, and more.

Wild Fruits: Composition, Nutritional Value and Products Abdalbasit Adam Mariod, 2019-12-14 Wild fruits play an important role in mitigating hunger in the developing world. As a sustainable and natural food source in rural areas, these fruits have a strong effect on regional food security and poverty alleviation. This makes the utilization of wild foods incredibly important for native populations both in terms of food security and economics. There are many traditional methods for wild fruit harvesting, indigenous tree and plant domestication and cultivation passed down through generations that are sustainable and economically viable, ultimately contributing to a better quality of life for large sections of the developing world. To date there has not been a reference work focusing on the full scope of wild fruits from their growth and chemical makeup to their harvest, distribution, health effects and beyond. *Wild Fruits: Composition, Nutritional Value and Products* adequately fills this gap, expansively covering the utilization of multi-purpose wild fruits in regions worldwide. Effects on

quality of life, food security, economics and health are extensively covered. Over 31 wild fruit species are examined, with individual chapters focusing on each species' phytochemical constituents, bioactive compounds, traditional and medicinal uses and chemical composition. Harvest, post-harvest and consumption methods are covered for each, as are their overall effect on the food security and economics of their native regions. This book is essential for researchers in search of a comprehensive singular source for the chemical makeups and cultivation of indigenous wild fruits and their many benefits to their native regions.
