Kuby Immunology Jenni Punt, Sharon Stranford, Patricia Jones, Judy Owen, 2018-10-16 Janis Kuby's groundbreaking introduction to immunology was the first textbook for the course actually written to be a textbook. Like no other text, it combined an experimental emphasis with extensive pedagogical features to help students grasp basic concepts. Now in a thoroughly updated new edition, Kuby Immunology remains the only undergraduate introduction to immunology written by teachers of the course. In the Kuby tradition, authors Jenni Punt, Sharon Stranford, Patricia Jones, and Judy Owen present the most current topics in an experimental context, conveying the excitement of scientific discovery, and highlight important advances, but do so with the focus on the big picture of the study of immune response, enhanced by unsurpassed pedagogical support for the first-time learner. Punt, Stranford, Jones, and Owen bring an enormous range of teaching and research experiences to the text, as well as a dedication to continue the experiment-based, pedagogical-driven approach of Janis Kuby. For this edition, they have worked chapter by chapter to streamline the coverage, to address topics that students have the most trouble grasping, and to continually remind students where the topic at hand fits in the study of immunology as a whole.

Economic and Societal Transformation in Pandemic-Trapped India Subrata Saha, Mukunda Mishra, Anil Bhuimali, 2022-02-04 This book acquaints the reader with the critical changes in India's economy and society amidst the unprecedented pandemic outbreak of COVID-19, which has been devastating by breaking all prior records of illness and fatality. The present crisis is shown to be more than an acute health hazard as it carries with it other threats associated with the economy, society, culture, psychology, and politics. The dynamic driving forces that have a significant bearing on life, space, and time are explored, providing a basis on which social scientists can understand the prevailing equations and project the unforeseen future to contribute to a policymaking mechanism. The Indian scenario presented here takes into account how the COVID-19-induced lockdown of transport services, closing of factories, and restrictions on mobilization have caused the economy to face a recession, affecting mostly the unorganized sector. Travel restrictions and quarantines affecting hundreds of millions of people have left Indian factories short of labour, causing havoc in the production system.

Semi-skilled jobholders have lost their employment, and the country has witnessed the plight of large pools of migrant labourers returning on foot to their homelands hundreds of miles away with their families and belongings. Contributors to this volume are drawn from diverse disciplines, displaying the solidarity of academic knowledge in a physically divided world. This common platform is provided to the practitioners of relevant academic disciplines under the umbrella of regional sciences – a forum for the exchange of ideas that may be effective in the sustainable management of the crisis and a way forward after it is mitigated. Thought-provoking discussions regarding different facets of the crisis are relevant not only to the current times but also to being prepared for the unforeseen post-COVID economic and societal order.

Biologically Inspired Cooperative Computing Yi Pan, Franz J. Rammig, Hartmut Schmeck, Mauricio Solar, 2006-11-24 In the world of information technology, it is no longer the computer in the classical sense where the majority of IT applications is executed; computing is everywhere. More than 20 billion processors have already been fabricated and the majority of them can be assumed to still be operational. At the same time, virtually every PC worldwide is connected via the Internet. This combination of traditional and embedded computing creates an artifact of a complexity, heterogeneity, and volatility unmanageable by classical means. Each of our technical artifacts with a built-in processor can be seen as a "Thing that Thinks, a term introduced by MIT's Thinglab. It can be expected that in the near future these billions of Things that Think will become an "Internet of Things, a term originating from ETH Zurich. This means that we will be constantly surrounded by a virtual organism of Things that Think. This organism needs novel, adequate design, evolution, and management means which is also one of the core challenges addressed by the recent German priority research program on Organic Computing.
