Lo que cabe en el espacio Hector Zenil, 2010-10-20 Cuanto cabe en nuestro espacio? Por que solo pueden existir cinco poliedros regulares y no seis? Que figuras llenan el plano y el espacio? Es el espacio una generalización trivial del plano? Podemos notar si estamos en un plano curvado o si estamos sobre el? En lenguaje casi coloquial, despegaremos figuras del espacio para rotarlas en cuatro dimensiones, contaremos poliedros en dimensiones superiores y nos preguntaremos acerca de las propiedades fundamentales del espacio. En este libro se devela como una parte de las matemáticas describen las propiedades más fundamentales del espacio en que vivimos y por lo tanto de la realidad en la que estamos inmersos.

El rumor de los paradigmas Raúl Antonio Gómez Marín, 2024-10-17 En un singular juego entre el quehacer investigativo, la filosofía de la ciencia y la epistemología, El rumor de los paradigmas se inserta activa y propositivamente en la querella contemporánea sobre la investigación y, muy particularmente, en el conflicto de interpretaciones que bordea las fronteras de las ciencias humanas y sociales con temas que nunca dejarán de inquietarnos: la interpretación, la comprensión y el sujeto,

los paradigmas, los roles que juegan las hipótesis, el marco epistemológico y la investigación misma, tipificada como un complejo proceso de recursos investigativos. Este libro propone una serie de escritos a manera de capítulos; textos que se enfocan en análisis críticos de diversos aspectos que, a juicio del autor, son cruciales en cualquier investigación. A partir de ahora, quedan para la consideración de profesores y estudiantes universitarios.

17 ecuaciones que cambiaron el mundo Ian Stewart, 2013-02-05 Las ecuaciones, esos conjuntos de números y símbolos separados por el signo igual, son el alma de las matemáticas, la ciencia y la tecnología. Sin ellas, nuestro mundo no existiría en su forma actual: escondidas para muchos, han constituido una fuerza motriz en la civilización humana durante miles de años, abriendo nuevas perspectivas en campos tan variados como las comunicaciones, la tecnología espacial o la física nuclear. Que así es, es algo que se encarga de demostrar, con su maestría habitual, el distinguido matemático y reputado divulgador Ian Stewart. Para ello ha seleccionado 17 ecuaciones, pertenecientes a dos grupos diferentes. Uno es el de las ecuaciones que revelan regularidades matemáticas, como el teorema de Pitágoras, que nos dice cómo están relacionados los tres lados de un triángulo rectángulo, mientras que el otro es el de las ecuaciones que expresan leyes de la naturaleza, como la ley de gravitación universal de Newton, las ecuaciones del electromagnetismo de Maxwell, la ecuación de Schrödinger de la mecánica cuántica, o la ecuación desarrollada por Claude Shannon que define cuánta información contiene un mensaje.
