The People's Lobby Elisabeth S. Clemens, 1997-09-02 Clemens sheds new light on how farmers, workers, and women invented strategies to circumvent the parties. Voters learned to monitor legislative processes, to hold their representatives accountable at the polls, and to institutionalize their ongoing participation in shaping policy. Closely analyzing the organizational politics in three states -- California, Washington, and Wisconsin -- she demonstrates how the political opportunity structure of federalism allowed regional innovations to exert leverage on national political institutions.

Labor Digest, 1919

The Psychology and Politics of the Collective Ruth Parkin-Gounelas, 2012-05-31 What are the psychological factors in operation when we form groups or crowds, and how are these affected by socio-historical circumstances? History offers endless examples of different forms of human collectivity, both private and public, small-scale and large: from the primal horde to the modern nuclear family, from the Athenian polis to virtual internet communities. Within the context of shifting

social bonds in global culture, this book brings together debates on the left from political philosophy, psychoanalysis, social psychology and media and cultural studies to explore the logic of the formation of collective identities from a new theoretical perspective. Challenging liberal-capitalist models of individualism, as well as postmodern identity politics, analysts here turn to Continental philosophy (Lacan, Derrida, Agamben, Laclau, Badiou, among others) in order to re-think collectivity in relation to questions of agency, alterity, affect, sovereignty, the national imaginary and the biopolitical. In the aftermath of the great mass movements of the twentieth century (Marxist-Leninism, Mao), which resulted in bureaucratic submission and the cult of the State, the fate of our collective identity today raises urgent questions about the future of collaborative activity, the role of mediating institutions in shaping mass psychology, what is at stake in a radical democracy, and what happens in a crowd.

Game Theory: A Nontechnical Introduction To The Analysis Of Strategy (Fourth Edition) Roger A

Mccain, 2023-05-29 As with the previous editions, this fourth edition relies on teaching by example and the Karplus Learning Cycle to convey the ideas of game theory in a way that is approachable, intuitive, and interdisciplinary. Noncooperative equilibrium concepts such as Nash equilibrium, mixed strategy equilibria, and subgame perfect equilibrium are systematically introduced in the first half of the book. Bayesian Nash equilibrium is briefly introduced. The subsequent chapters discuss cooperative solutions with and without side payments, rationalizable strategies and correlated equilibria, and applications to elections, social mechanism design, and larger-scale games. New examples include panic buying, supply-chain shifts in the pandemic, and global warming.

Towards Engineering Free/Libre Open Source Software (FLOSS) Ecosystems for Impact and Sustainability

Brian Fitzgerald, Audris Mockus, Minghui Zhou, 2019-07-05 Free/libre open source software (FLOSS) ecosystems such as Linux have had a tremendous impact on computing and society and have captured the attention of businesses, researchers, and policy makers. Research on FLOSS has been ongoing for almost two decades. From an economic perspective, the most common topics involve motivation and organization. As commercial participation in FLOSS has become common, the question of how to combine FLOSS practice with commercial practice has been the subject of research, particularly with a

view to understanding how to ensure sustainability of the ecosystem. This book is based on a Shonan meeting on FLOSS ecosystem sustainability held in June 2017. The meeting brought together a blend of established and young researchers who were actively studying the FLOSS phenomenon. These researchers were drawn from a variety of disciplines including software engineering, human computer interaction, information systems, computer-supported cooperativework, data mining, cognitive science, psychology, operations research, and management. Industry practitioners who were active in the FLOSS space also participated. This book presents the results of discussion on fundamental questions related to the impact and sustainability of FLOSS ecosystems, including:

- How does an ecosystem form? How do different stakeholders work together to form a community that develops and maintains valuable and freely available software, and how does an ecosystem with millions of repositories and developers operate given the lack of centralized planning?
- How does an ecosystem evolve in response to the environment as technology and needs evolve over time?
- How do newcomers learn the protocols and practices of an ecosystem? How would they sustain the ecosystem? What is the relationship between people and ecosystem sustainability?
