Progettato per essere usato in combinazione con uno strumento parallelo di osservazione, l'Autism Diagnostic Observation Schedule (ADOS), l'ADI-R è un'intervista ad ampio raggio finalizzata ad ottenere una gamma completa di informazioni per la diagnosi di autismo e per valutare i disturbi dello spettro autistico (DSA). Si tratta di un modo altamente standardizzato e sistematico di utilizzare le descrizioni raccolte riguardo al comportamento di un soggetto nell'intero corso della sua vita, affinché sia possibile determinare se il suo percorso di sviluppo e le caratteristiche del suo comportamento soddisfano o meno i criteri della diagnosi di autismo o DSA. L'intervista è rivolta ai genitori o agli educatori di soggetti dalla prima infanzia all'età adulta, con un'età mentale al di sopra dei 2 anni.

Autistic Spectrum Disorders in Children Vidya Bhushan Gupta,2004-03-19 Impeccably researched and written by a nationally known team of specialists from neurodevelopmental pediatrics, psychology, epidemiology, education, occupational therapy, and speech therapy backgrounds, Autistic Spectrum Disorders in Children presents a multidisciplinary profile of autism and pervasive developmental disorders in children. Tracing

Supporting Autistic People Through Pregnancy and Childbirth Hayley Morgan,Emma Durman,Karen Henry,2024-01-18 This comprehensive and accessible guide is for every birthing and health professional looking to improve their care during pregnancy, birth, and aftercare for autistic women. With a distinct lack of scientifically approached work in this area, this much-needed book takes an intersectional, feminist approach and covers the background of modern birth practices and autism as a diagnosis. With intersectionality as a core feature, the impact of cultural differences, underdiagnoses, stigma, and stereotypes amongst ethnic minorities is also included. It discusses how pain functions in the autistic brain as well as co-occurring conditions such as alexithymia, chronic pain, epilepsy, and Ehlers-Danlos Syndrome. This multidisciplinary author team includes two well-established autism experts, and an experienced midwife and lecturer who provides invaluable birthing insight, as well as approaches for sensation management during birth, insider knowledge on midwifery protocols, and accessible tools for autistic pregnant people and families to use.

The Cross Cultural Examination of a Brief Autism Diagnostic Interview (ADI-R) in Korea and The United States Elizabeth Lally Daley,2013 Autism is the fastest growing developmental disability in the United States; as many as 1 in 88 individuals have been identified with an Autism Spectrum Disorder (ASD) (Centers for Disease Control and Prevention [CDC], 2010). Although scientists are working on understanding how many people in the population have autism, there is a limited amount of focus on the identification of any cultural factors that may influence people's understanding about autism, attitudes about autism, and reporting of symptoms. The accepted methods for diagnosing autism are the Autism Diagnostic Observation Schedule (ADOS) and the Autism Diagnostic Interview-Revised (ADI-R). This study seeks to develop a brief version of the ADI-R using Item Response Theory with a Korean sample of school aged children divided into two groups based on age and language ability. The specific items from the Brief Korean Autism Diagnostic Interview (KBADI) are compared to the Korean translated ADI-R scoring algorithms, which were originally derived in the United States, in order to give some insight into any cultural differences. This study aims to identify any Korean cultural influences that may play a role in the parent or caregiver's reporting of autism symptoms
