Risk Assessment and Risk Communication Strategies in Bioterrorism Preparedness Manfred S. Green,2007-04-26 This book contains articles from leading experts in the various disciplines associated with risk assessment and risk communication associated with bioterrorism. These papers are based on presentations at a NATO Advanced Research Workshop in Israel in June 2005, which addressed these issues. The book offers a comprehensive, practical guide for approaching risk assessment and risk communication in a bioterrorism event.

Reassessing Twenty Years of Vaccine Development Against Tuberculosis Ulrich E. Schaible, Stefan H.

Kaufmann, 2018-03-23 Tuberculosis (TB) remains the prime bacterial infection worldwide with 10.4 million infections and a death toll of 1.7 million people in 2016 according to WHO statistics. Tuberculosis is caused by members of the *Mycobacterium tuberculosis* complex, facultative intracellular bacteria able to thrive within otherwise potent innate defense cells, the macrophages. In a world of increasing numbers of infections with drug resistant *M. tuberculosis* strains, the daunting race between developing new therapeutics and emerging resistant strains will hardly produce a winner. This cycle can only be broken by enhancing population wide immune control through a better vaccine as the only one currently in use, *M. bovis* Bacillus Calmette Guérin (BCG). The protective efficacy of BCG against pulmonary tuberculosis in all age groups is dissatisfying and geographically highly diverse with the tropical areas showing the lowest efficacy rates. Despite worldwide vaccination coverage, the impact of BCG on the steep decrease of tuberculosis incidence rates in the developed world seems therefore questionable and can rather be attributed to improved social, housing and nutritional conditions, better health care, surveillance and treatment systems. The last 15 years saw tremendous efforts to improve vaccination strategies against tuberculosis. Different paths of vaccine approaches were followed including genetically improved BCG strains, attenuated *M. tuberculosis* variants, recombinant viral vectors and subunit vaccine candidates combined with novel more potent adjuvants. With the first novel vaccine candidates being evaluated in clinical phases II and III and initial results chastening the expectations, a critical reassessment of all candidates is inevitable. Here, we assembled experts to review and assess the current status of novel anti-tuberculosis vaccine candidates, their efficacy and prospects for implementation as well as the pitfalls and possible measures for improvement.

Kuby Immunology Jenni Punt, Sharon Stranford, Patricia Jones, Judy Owen, 2018-10-16 Janis Kuby's groundbreaking introduction to immunology was the first textbook for the course actually written to be a textbook. Like no other text, it combined an experimental emphasis with extensive pedagogical features to help students grasp basic concepts. Now in a thoroughly updated new edition, Kuby Immunology remains the only undergraduate introduction to immunology written by teachers of the course. In the Kuby tradition, authors Jenni Punt, Sharon Stranford, Patricia Jones, and Judy Owen present the most current topics in an experimental context, conveying the excitement of scientific discovery, and highlight important advances, but do so with the focus on the big picture of the study of immune response, enhanced by unsurpassed pedagogical support for the first-time learner. Punt, Stranford, Jones, and Owen bring an enormous range of teaching and research experiences to the text, as well as a dedication to continue the experiment-based, pedagogical-driven approach of Janis Kuby.

For this edition, they have worked chapter by chapter to streamline the coverage, to address topics that students have the most trouble grasping, and to continually remind students where the topic at hand fits in the study of immunology as a whole.

Color Atlas of Immunology Gerd R. Burmester, Antonio Pezzutto, 2011-01-01 A pocket atlas flexibook on this dynamic and wide-ranging field, indispensable for students of medicine and biology alike. Complex processes are well-illustrated in clear images that are not burdened with unnecessary details. Following an introductory part and a section on laboratory methods in immunology, the bulk of the book concentrates on the manifestations of immunological diseases in the human body, providing comprehensive capsule descriptions of all common immune diseases.

Evaluations of Individual Scientists and Research Institutions Tibor Braun, 2006 Scientometrics, i.e. the field of quantitative studies of science is incontestably coming of age worldwide. However, it is without doubt that evaluative scientometrics is at the forefront of interest of scientists, science managers and science policy people in most countries of the world. Unfortunately, there are lots of confusions and misunderstandings around this topic. In trying to improve this situation the journal begins the publication of a Scientometrics Guidebooks Series to be corollary to the journal Scientometrics. The first volume of the series (part I-II) deals with evaluation at individual and departmental level in the form of a well selected collection of afferent papers from Scientometrics. The aims and scope of the Guidebook is to provide PhD students, research scientists, science managers, committee decision-makers, science and research policy people, granting bodies and any interested person in such topics a detailed, precise and theoretically and practically useful tool.

Comprehensive Natural Products III ,2020-07-22 Comprehensive Natural Products III, Third Edition, Seven Volume Set updates and complements the previous two editions, including recent advances in cofactor chemistry, structural diversity of natural products and secondary metabolites, enzymes and enzyme mechanisms and new bioinformatics tools. Natural products research is a dynamic discipline at the intersection of chemistry and biology concerned with isolation, identification, structure elucidation, and chemical characteristics of naturally occurring compounds such as pheromones, carbohydrates, nucleic acids and enzymes. This book reviews the accumulated efforts of chemical and biological research to understand

living organisms and their distinctive effects on health and medicine and to stimulate new ideas among the established natural products community. Provides readers with an in-depth review of current natural products research and a critical insight into the future direction of the field Bridges the gap in knowledge by covering developments in the field since the second edition published in 2010 Split into 7 sections on key topics to allow students, researchers and professionals to find relevant information quickly and easily Ensures that the knowledge within is easily understood by and applicable to a large audience
