Freaky Space Stories Katie Kawa, 2015-07-15 Peering into the immense blackness of space has taught us a lot throughout the centuries, but it's also left us with unanswered questions and a burning desire to learn more. Readers are taken on an amazing voyage through some of the freakiest space scenarios, such as other Earthlike planets beyond our solar system that could support life, the possibility of mining water on the moon, and the dark world of the plutoids—the distant dwarf planets in the Kuiper Belt beyond Neptune. Filled with exciting facts, awe-inspiring images, and comprehensive sidebars, this book poses the ultimate freaky question: When we stare up at the stars, is something staring back at us?

First Knowledges Astronomy Karlie Noon, Krystal De Napoli, 2022-04-26 What do you need to know to prosper for 65,000 years or more? The First Knowledges series provides a deeper understanding of the expertise and ingenuity of Indigenous Australians. Aboriginal and Torres Strait Islander people are the oldest scientists in human history. Many First Peoples regard the land as a reflection of the sky and the sky a reflection of the land. Sophisticated astronomical expertise embedded within the Dreaming and Songlines is interwoven into a deep understanding of changes on the land, such as weather patterns and seasonal shifts, that are integral to knowledges of time, food availability, and ceremony. In *Astronomy: Sky Country*, Karlie Noon and Krystal De Napoli explore the connections between Aboriginal environmental and cultural practices and the behaviour of the stars, and consider what must be done to sustain our dark skies, and the information they hold, into the future.

The Routledge Handbook of Social Studies of Outer Space Juan Francisco Salazar, Alice Gorman, 2023-07-10 The Routledge Handbook of Social Studies of Outer Space offers state-of-the-art overview of contemporary social and cultural research on outer space. International in scope, the thirty-eight contributions by over fifty leading researchers and artists across a variety of disciplines and fields of knowledge, present a range of debates and pose key questions about the crafting of futures in relation to outer space. The Handbook is a call to attend more carefully to engagements with outer space, empirically, affectively, and theoretically, while characterizing current research practices and outlining future research agendas. This recalibration opens profound questions of intersectional politics, race, equity, and environmental justice around the contested topics of space exploration and life off-Earth. Among the many themes included in the volume are the various infrastructures, networks and systems that enable and sustain space exploration; space heritage; the ethics of outer

space; social and environmental justice; fundamental debates about life in outer space as it pertains to both astrobiology and SETI; the study of scientific communities; the human body and consciousness; Indigenous astronomical systems of Knowledge; contemporary space art; and ongoing critical interventions to overcome the legacies of colonialism and dismantle hegemonic narratives of outer space.

Light Pollution Handbook Kohei Narisada, Duco Schreuder, 2013-06-05 This book deals with light pollution and about the ways to reduce it. Light pollution is one of the negative side-effects of artificial outdoor lighting. The term light pollution is an unhappy one, but as no better alternative seems to exist, it will be used throughout this book. The function of all outdoor lighting is to enhance the visibility or the aesthetics in the nighttime environment. The light should come where it is needed. If not, it is spilled, causing economic and environmental losses as well as disturbance and discomfort. The overall effects are termed 'light pollution'; a major form of light pollution is the glow extending over the night sky. Sky glow is discussed in many astronomical textbooks and in many popular brochures. The present book is primarily aimed at those responsible for outdoor lighting installations. Thus, an engineering approach has been chosen. The level of the book is that of 'college' or 'University level'. The book is organized in two parts. The first seven chapters cover the areas of general interest, and conclude with recommendations. The second part deals with the scientific and engineering elaboration of the first part. A number of examples are included that refer to specific outdoor lighting installations and projects that are directly related to the reduction of light pollution. Finally, some information is given about the authors.
